ARRL Membership Manager Katie Breen, W1KRB, is overseeing the ARRL EXPO at Hamvention. "A new area within the EXPO this year is the ARRL Movie Room," she said. "We decided to try something a little different this year and create a cozy area to sit back and relax and watch a movie on the 10-foot screen. We are very pleased that Bob Allphin, K4UEE, Peter I participant and producer of the DXpedition video, will be a featured guest on Saturday in the movie room. This will be a unique opportunity to come and meet Bob, listen to additional commentary on the many DXpeditions he has been on and have some personal time to ask your questions about going on a DXpedition." Allphin has visited 93 DXCC entities, operated from 50 and been on 33 DXpeditions, of which 6 set world records. He took 5th place at the 1996 WRTC with teammate James Pratt, N6IG.

Breen said that the Youth Lounge, organized by 2007 Goldfarb Memorial Scholarship recipient Andrea Hartlage, KG4IUM, will be up and running again this year. "With a bevy of activity for our young hams, the youth lounge is a full scale version of what every club and group can do to entice young hams to their events. This is a perfect opportunity to visit Andrea and the other volunteers in the areas and bring back ideas to your home clubs."

The 2008 Youth Dinner will also be on Saturday night, but with one change: Instead of being at a local restaurant, it will take place at the DARA clubhouse. Breen said, "We're very excited by the generosity the DARA Board of Directors has shown to us. They let me know that the restaurant we've used the past couple of years for the youth dinner had gone out of business. So while I was searching for a new location, the DARA Board was meeting and decided to offer their clubhouse to the kids." Hartlage said she was thrilled with this option this year. "Not only can we enjoy a great pizza party at the clubhouse, but we can even have time to get on the air together! I'm so thankful to DARA for stepping up and helping us out in such a generous way."

Breen followed up, saying, "DARA's theme of fellowship extends into the EXPO area with their partnership with us, including a new area within EXPO that will be dedicated to the newer operators and future hams."

==> KANSAS BECOMES 26TH STATE TO HAVE PRB-1 LAW

After an unsuccessful attempt eight years ago to get a PRB-1 <http://www.arrl.org/FandES/field/regulations/local/prb-1.html> type bill signed in Kansas, radio amateurs in that state have succeeded in becoming the 26th state with a PRB-1 law on the books. Kansas Governor Kathleen Sebelius signed HB 2805 <http://www.kslegislature.org/bills/2008/2805.pdf> into law on April 9. The bill, written by Rep Arlen Siegfreid (R-15), passed unanimously in both the Kansas House of Representatives and Senate. It takes effect July 1, 2008.

Known as the "Kansas Emergency Communications Preservation Act," the new law concerns federally licensed Amateur Radio Service communications. According to the governor's office, the law "prohibit[s] a city or county governing body from taking any action that precludes federally licensed amateur radio service communications, or that does not conform to federal regulations related to amateur radio antenna facilities."

The new law states that if a municipality takes any action that regulates the placement, screening, number or height of a station antenna structure, the action must "Reasonably accommodate federally licensed amateur radio service communications; and constitute the minimum regulation practicable to carry out the legitimate purpose of the governing body." Antenna support structures constructed prior to the bill's effective date "are exempted from subsequent changes in zoning regulations...and may be repaired as required."

JD Spradling, KC0NYS, of Olathe, Kansas, is chairman of the committee <http://www.hamsforkansas.org/> that led the charge to get a PRB-1 law on the books in that state. He commented: "Many local zoning boards don't give FCC regulations adequate consideration when making zoning decisions and across the country amateurs have found that state laws are a more effective tool for influencing local zoning regulations. So beginning in the 1990s, amateurs began lobbying for legislation that would place PRB-1-type language into their state laws."

Upon hearing the news that Governor Sebelius signed the bill into law, Spradling said, "This venture has been successful because we have had a great team effort all the way through the process, from all who stepped up -- from our state and local representatives, to our subject matter experts and the PRB-1 Committee members from Miami County, Kansas, as well as everyone else who had been proactive in the 2008 Kansas Legislative process for your fellow hams."

==> SPECIAL EVENTS TO COMMEMORATE 96TH ANNIVERSARY OF TITANIC TRAGEDY

Several Amateur Radio special event operations are scheduled to mark the 96th anniversary of the sinking of the RMS Titanic. The "unsinkable" White Star Line passenger vessel was on its maiden voyage from Liverpool, England, to New York City when it struck an iceberg and sank early on April 15, 1912. More than 1500 people perished, while some 700 passengers in 19 lifeboats were rescued by the RMS Carpathia, whose radio operator copied the frantic distress call (the still common "CQD" signal, possibly coupled with the then-new "SOS") transmitted by MGY radio operator Jack Phillips as the Titanic foundered.

Special event W0S <http://www.wzeros.com/W0S_Special_Event.html>, which stands for "White Star Line," will be on the air from the Titanic Museum in Branson, Missouri <http://www.titanicbranson.com/>. The W0S operation will commence at 1300 UTC on Saturday, April 12, and conclude at 2400 UTC on Sunday, April 13. Members of the Nixa Amateur Radio Club and the Southwest Missouri Amateur Radio Club (SMARC) will be among those at the helm of W0S. Icom, Vibroplex, MicroLog, Rayfield Communications and MFJ are corporate sponsors for the event.

Look for W0S on or around these frequencies: SSB, 3.850, 7.250, 14.250 and 21.350 MHz; CW, 3.550, 7.050, 14.050 and 21.050 MHz; PSK, 80 and 40 meters only. Operators will be listening 3 kHz up for calls. There will also be activity on D-STAR, EchoLink and IRLP; please check the event's Web page for information concerning these frequencies. Visitors are welcome. E-mail the Nixa club for more information <titanichams@wzeros.com>.

Special event station W1MGY will be on the air from the Titanic Historical Society Museum in Indian Orchard, Massachusetts. Operation will concentrate on 20 and 40 meters April 11-12 from 1400 UTC until 2030 UTC each day, although W1MGY may be on the air at other times, bands and modes throughout the 96th anniversary weekend.

Look for W1MGY on or around: CW, 3.533, 7.033, 14.033, 18.099, 21.033 and 28.033 MHz; SSB, 3.860, 7.260, 14.260, 18.160, 21.360 and 28.336 MHz, conditions permitting.

To schedule a contact with W1MGY, contact Dave Isham, KB1MU <kb1mu@charter.net>, indicating a preferred date, time and frequency. Include a self-addressed, stamped envelope with QSL requests to Titanic Historical Society, W1MGY, PO Box 51053, Indian Orchard, MA 01151-0053.

==> 2008 ARRL/TAPR DIGITAL COMMUNICATIONS CONFERENCE: CALL FOR PAPERS

Technical papers are solicited for presentation at the 27th annual ARRL/TAPR <http://www.tapr.org/> Digital Communications Conference (DCC), Friday-Sunday, September 26-28, in Chicago, Illinois <http://www.tapr.org/dcc.html>. Papers will also be published in the Conference Proceedings. Authors do not need to attend the conference to have their papers included in the Proceedings. The submission deadline is July 31.

The ARRL/TAPR Digital Communications Conference is an international forum for technically minded radio amateurs to meet and present new ideas and techniques. Paper/presentation topic areas include -- but are not limited to -- software defined radio (SDR), digital voice, digital satellite communication, digital signal processing (DSP), HF digital modes, adapting IEEE 802.11 systems for Amateur Radio, Global Positioning System (GPS), Automatic Position Reporting System (APRS), Linux in Amateur Radio, AX.25 updates and Internet operability with Amateur Radio networks.

Submit papers to Maty Weinberg, KB1EIB, ARRL, 225 Main St, Newington, CT 06111 or via e-mail <maty@arrl.org>. Papers will be published exactly as submitted, and authors will retain all rights. ARRL will provide additional information on the 2008 DCC as it becomes available.

==> FCC ENFORCEMENT ACTIONS

Special Counsel in the FCC Spectrum Enforcement Division Riley Hollingsworth sent a Warning Notice to Edward R. Drone, W0NYF, of Sycamore Hills, Missouri alerting him that "the trustee of the St. Louis and Suburban Radio Club repeaters K0STL (146.940 MHz), N0TYZ (146.910 MHz), W0FF (146.970 MHz) and W0SRC (146.850 MHz) has requested in writing that you refrain from use of the repeaters." These requests, the Commission, noted, were due to Drone's "failure to follow operational rules set forth by the licensee/control operators of the repeaters for their users." Hollingsworth reminded Drone about a past conversation they had in which Drone "acknowledged that [he] had been directed to stay off of the repeaters and stated that [he] would comply," but, according to the Warning Notice, Drone "utilized the K0STL repeater on March 31, 2008 and stated that [he] would not refrain from using it." Drone was told he was expected "to abide by the request to stay off of the above-listed repeaters and any other such request by a repeater licensee, control operator or trustee." Drone was warned that the FCC would initiate enforcement action against his license -- which could include revocation, monetary forfeiture or a "modification proceeding to restrict the frequencies on which [he] may operate W0NYF." Fines normally range from $7500-$10,000.

Hollingsworth also sent a Warning Notice to David R. Henry, W2DRH, of Cuddebackville, New York alerting him that "the K3TSA repeater system operating on 145.350 MHz has requested in writing that you refrain from use of the repeater." These requests, the Commission, noted, were due to Henry's "failure to follow operational rules set forth by the licensee/control operators of the repeater and FCC rules." Hollingsworth reminded Henry that the trustees had "previously requested verbally [to

Henry that he] refrain from using the system, but [Henry has] apparently ignored both verbal and written requests." Hollingsworth also noted that Henry "complained that on February 13, 2008, the control operator of the K3TSA repeater shut down the repeater while [he was] engaged in emergency communications. [Henry] had previously been warned not to use the repeater and, moreover, three of the five control operators of the K3TSA repeater witnessed the communications and reported that there was no emergency situation." Henry was warned that the FCC would initiate enforcement action against his license -- which could include revocation, monetary forfeiture or a "modification proceeding to restrict the frequencies on which [he] may operate W2DRH." Fines normally range from $7500-$10,000. Hollingsworth also pointed out that Henry's Amateur Radio license was set to expire on April 21, 2009. "Please be advised," Hollingsworth said, "that your license will not be routinely renewed unless this matter is resolved."

Hollingsworth sent a Warning Notice to non-licensee residential owners concerning interference from a flat screen television unit to a licensed amateur in Edgewater, Florida.

Direct all questions concerning the Amateur Radio Service Enforcement Actions Web postings via e-mail only to Riley Hollingsworth <fccham@fcc.gov> in the FCC Spectrum Enforcement Division.

==>SOLAR UPDATE

Tad "Unless to see my shadow in the Sun" Cook, K7RA, this week reports: As of Thursday, April 10, there have been no sunspots for seven days. We may see sunspots return around April 21-28. This is based on recent activity rotating out of view around the Sun and (we hope) reappearing later this month. The predicted solar flux remains at 70 until April 20 when it reaches 75, then 80 on April 21. The predicted higher solar flux should correlate with the return of sunspots. Geophysical Institute Prague predicts quiet to unsettled conditions April 11, quiet April 12-13, quiet to unsettled April 14, unsettled April 15, quiet to unsettled April 16 and back to quiet on April 17. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend is the YLRL DX-YL to NA-YL Contest (SSB) on April 11-13. The EU Spring Sprint (CW) is April 12. The JIDX CW Contest, Radio Maritime Day and the Georgia QSO Party are April 12-13. Be sure to check out the SKCC Weekend Sprintathon and the UBA Spring Contest (SSB) on April 13. The RSGB 80 Meter Club Championship (SSB) is scheduled for April 16. The CQ WW WPX Contest (SSB) is March 29-30. Next weekend, look for the Holyland DX Contest, the TARA Skirmish

Digital Prefix Contest, the ES Open HF Championship, the Feld Hell Sprint and the EU Spring Sprint (SSB) on April 19. The Michigan QSO Party, the EA-QRP CW Contest, the Ontario QSO Party and the YU DX Contest are April 19-20. The Run for the Bacon QRP Contest is April 21. The SKCC Sprint is April 23 and the RSGB 80 Meter Club Championship (Data) is April 24. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, April 20, 2008, for these online course sessions beginning on Friday, May 2, 2008: Technician License Course (EC-010); Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* National Hurricane Center Director: Hams Give "Valuable" Reports: Director of the National Hurricane Center (NHC) Bill Read, KB5FYA, praised Amateur Radio at the National Hurricane Conference in Orlando earlier this month <http://www.voipwx.net/local/Bill_Read_on_Ham_Radio_Hurricane_Conference2008.wmv>. "Ham radio has always played a critical role in emergencies," Read said. "What goes out when you have a high wind event or major flooding is the communications system, so you lose even cell phones, landline phones, commercial radio and TV. In those cases, ham radio operators that can put up emergency transmitters and antennas in the wake of a storm can give us reports that are valuable. They also help in the search and rescue efforts in the aftermath." The NHC has a dedicated amateur station on-site -- WX4NHC -- and has worked closely with hams for decades. -- Thanks to Dan Musten, KD4RAA, and John Van Pelt, K4JVP, for the information

* Zapping Cancer Cells at 13.56 MHz on "60 Minutes" This Weekend: John Kanzius, K3TUP, of Erie Pennsylvania, has been working on an RF-based treatment for cancer that is currently undergoing testing. According to ARRL Media and Public Relations Manager Allen Pitts, W1AGP, Kanzius is scheduled to be on the CBS news show "60 Minutes" on Sunday, April 13

(keep in mind that the line-up could change). "While there never is a way to predict what shows and what ends up on the cutting room floor, John gave as many plugs to his ham radio background as he could in being the foundations of hands-on learning that led to his research and invention," Pitts said. Kanzius, a very active Amateur Radio operator, aided in the creation of the upcoming ARRL Technology and Amateur Radio public relations campaign. Read more about Kanzius and his ground-breaking idea to kill cancer cells with radio waves in the February 2008 issue of QST.

* ARRL VE Manual Now Available: The ARRL VEC leads the way when it comes to licensing amateurs, thanks to the excellent work of thousands of volunteer examiners who give so generously of their time, energy and skill. Whether you have ever thought about becoming a Volunteer Examiner or you are a seasoned VE, the "ARRL VEC Volunteer Examiner Manual" <http://www.arrl.org/catalog/?item=1328> is the complete guide to the ARRL Volunteer Examiner program. Packed with everything new and experienced ARRL VEs need to know, this book is loaded with information, including chapters on becoming a Volunteer Examiner, the Volunteer Examiner Team, preparing for the test session, Form 605; conducting the test session, session report and returning documents, FCC Part 97 Rules and more. To learn more about becoming an ARRL Volunteer Examiner, please see the ARRL VEC Web Page <http://www.arrl.org/arrlvec/become-a-ve.html>. Order your copy of the "ARRL VEC Volunteer Examiner Manual" today.

* Ham to Hike Pacific Crest Trail: Bruce Prior, N7RR, a contributor to QST, has announced plans to hike the Pacific Crest Trail (PCT) later this month. The PCT is 2650 miles long, ranging from the California-Mexico border all the way to the Canadian border and reaching an altitude of 13,153 feet. On April 19, Prior will begin the journey near Campo, California with hopes of reaching Manning Park, British Columbia in late September or early October. Prior will bring along his Elecraft KX1 with the 30 meter/80 meter module, as well as resonant half-wavelength dipole antennas for the 80, 40, 30 and 20 meter bands. While not planning to do any pedestrian-mobile contacts, Prior said he will wait until he has set up camp for the evening before getting on the air: "Occasionally I may decide to operate in the daytime, such as from the summit of Mount Baden-Powell (9399 feet) or at the California-Oregon border on the PCT." For more information on frequencies, times and nets that Prior will be on, please visit his blog <http://www.n7rr.com/>. According to the Pacific Crest Trail Association (PCTA), approximately 300 people attempt to hike the entire trail from end-to-end each year. The trip usually takes between four and six months. Around 180 complete the hike each year. The route is mostly through National Forest and, where possible, protected wilderness areas. The trail avoids civilization in favor of scenic and pristine mountainous terrain with few roads, passing through the Laguna, San Jacinto, San Bernardino, San Gabriel, Liebre, Tehachapi and Sierra Nevada ranges in California, and the Cascade Range in California, Oregon and Washington.

* William F. Buckley Meets Amateur Radio: In a personal essay published in the April 7, 2008 issue of "The National Review," the late William F.

Buckley Jr described a fascinating story involving himself, Senator Barry Goldwater, K7UGA (SK), and of course ham radio. It seems that Mr Buckley was part of a 12 man trip to Russia's Vostok station, a very remote outpost at the magnetic South Pole. In addition to his brother, Senator James Buckley, their old pal Barry Goldwater and his son Barry Jr were also members of this expedition. Buckley described being in a crowded Soviet igloo, entertained with "trays of caviar and tumblers of vodka." After toasting his Russian host, he was suddenly taken aside by Barry Jr. "Dad wants to see you" he said, pointing to the door. Buckley was taken to another igloo, apparently the radio shack. "Thought you might like to talk to your wife," the senior Goldwater said. Buckley describes the prideful look on Goldwater's face, having maneuvered the Soviet radio to contact his wife back home in Arizona! Although he was a man famous for his complete control of the English language, Bill Buckley said he was "speechless" as he heard the telephone ringing and his wife answering the telephone! He said, "It's me darling" and his wife responded, "It's three o'clock in the morning!" Buckley exclaimed, "I'm calling from the South Pole!" This story reminded me of the many nights back in the late 1970s when I gladly helped with phone patches from the US Navy base at McMurdo, Antarctica. Just as Senator Goldwater did, I awakened many people in the wee hours of the morning with a phone call from their loved ones on the bottom of the world! -- Bruce Jackson, KA5ELC, Cordova, Tennessee

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Amateur Radio Newsline" Report 1600 - April 11, 2008

(Note: This weeks newcast has several audio intensive stories which cannoy properly be displayed as text. We suggest that you go to our website at www.arnewsline.org and download and play the mp3 audio version of this weeks newscast. -- ARNewsline ")

Amateur Radio Newsline report number 1600 with a release date of Friday, April 11tht, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The Morse code comes to the Internet, a middle-East broadcaster highlights ham radio, and Newsline celebrates newscast number 1600 with a look back. Please join us for this trip through time on Amateur Radio Newsline" report number 1600 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO ON THE NET: IRC MORSE COMES TO THE WWW

It was bound to happen and now it has, Morse code over Internet Relay Chat or IRC.

According to its host website, CWirc is a plug-in for the X-Chat IRC client. It is designed to transmit raw Morse code over the internet using I-R-C servers as reflectors. The transmitted Morse code can be received in near real-time by other X-Chat clients who are equipped with the CWirc plug-in.

CWirc tries to emulate a standard amateur radio rig. It has the ability to send and receive Morse over virtual channels, and it can listen to multiple senders transmitting on the same channel. Morse code is keyed locally using a straight or iambic key connected to a computers serial port, or using the mouse buttons, Sound is played through the soundcard or through an external sounder.

Note that CWirc doesn't do any Morse decoding. It simply transmits and receives C-W timing events. The program and your computer does the rest to give you a Morse code experience without the radio, the antenna or any T-V-I.

More about CWirc is on-line at users.skynet.be/ppc/cwirc/ The website also has historic information on the Morse code and the telegraph. (Southgate)

**

RADIO LAW: KANSAS PROTECTS HAM RADIO TOWERS AND ANTENNAS

Kansas Becomes 26th State to have a law assuring to rights of hams to have antennas. Known as the Kansas Emergency Communications Preservation Act the new measure is fashioned after federal statute PRB-1.

The wording of HB 2805 is simple an unambiguous. It states that if a municipality takes any action that regulates the placement, screening, number or height of a ham radio station antenna structure, that this action must reasonably accommodate federally licensed amateur radio service communications. Also that the action must constitute the minimum regulation practicable to carry out the legitimate purpose of the governing body.

As to existing towers and antennas: These are grandfathered under a stipulation that says antenna support structures constructed prior to the bill's effective date are exempted from subsequent changes in zoning regulations. Also that they may be repaired as needed.

According to Tom Laux, N0AG, the Salvation Army was very supportive of the measure. Representatives of the Salvation Army twice testified in support of it at hearings held in Topeka. Laux says that they were fantastic.

The bill, written was by Rep Arlen Siegfreid. It unanimously passed in both the houses of the Kansas legislature. Kansas Governor Kathleen Sebelius signed HB 2805 into law on April 9. It takes effect July 1, 2008.

In the newsroom, I'm Bill Pasternak, WA6ITF. Jim. (QRZ, eHam, N0AG, others)

WORLDBEAT - LEBANON: AL JAZEERA TELEVISION COVERS HAM RADIO

Amateur Radio was highlighted on Quatar's international television service Al Jazeera. This in a documentary news show on Sunday April 6th. Amateur Radio Newsline's Burt Hicks, WB6MQV, is here with the details:

--

The Al Jazeera program, Hadeeth Al Sabah featured Radio Amateurs of Lebanon President, Hani Raad, OD5TE. Raad talked about Amateur Radio principles and his personal experience in ham radio emergency service communications over the past 28 years.

By way of background, Hani Raad, OD5TE, is a graduate of George Washington University with a degree in Electrical Engineering. He also holds the United States call sign AA3EI and was very active in both ARES and RACES when he lived in the Washington D.C area. As such he holds expertise on the methods used in the area of ham radio Emergency Communications in both the United States and Lebanon.

The show, which was repeated on Monday the April 7th, was described as a look at both worlds of ham radio and the way in which hams respond in time of crisis in both.

For the Amateur Radio Newsline, I'm Burt Hicks, WB6MQV, saying a happy 1600 to all.

--

In an e-mail to Newsline, OD5TE said that the program was extremely successful and all the feedback he has received form hams around the world has been very positive. (OD5TE, others)

**

HAM HAPPENINGS: WORLD AMATEUR RADIO DAY AND THE WARD AWARD

World Amateur Radio Day 2008 will take place on April 18th and this year you can win an award just for taking part in this years celebration. That's because the Polish Radio Amateur's Journal, with the support of the Polish Amateur Radio Union will be sponsoring this years WARD or World Amateur Radio Day award. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

By way of background, each year on the anniversary of its founding, the International Amateur Radio Union marks its inaugural meeting in Paris. A meeting that took place on April 18th some 83 years ago.

In honor of this historic event the IARU dedicates World Amateur Radio Day to the future of the world-wide service. And in continuing this theme the World Amateur Radio Day award will be granted by the Polish Radio Amateur's Journal to those who make either 10 QSOs on the High Frequency bands, or 10 QSOs on the VHF bands. All contacts must be made between 0000 and 2400 U-T-C on April 18th.

The full colored award is also available to SWL's for the same numbers of reports. To claim it you will need to send a completed application form along with a log extract that includes your list of QSO's and 5 International Reply Coupons to the The Polish Radio Amateur's Journal. Its address is MK QTC, Suchacz-Zamek - Wielmozy 5b, 82-340 Tolkmicko, Poland. Miore information is on-line at www.ward.pzk.pl

Saying a happy 1600 to all, I'm Bruce Tennant, K6PZW, in Los Angeles, for the Amateur Radio Newsline.

--

Oh yes. The deadline to file for this years World Amateur Radio Day award is midnight UTC on May 31st. (Southgate)

**

RESCUE RADIO: CANADIAN EARTH HOUR EXERCISE A SUCCESS

An emergency communications radio system was tested in Southern Ontario Canada during the March 29th Earth Hour. That's when the Toronto FM Communications Society in association with the Canadian Amateur Radio Emergency Service and Emergency Management Ontario conducted a trial of the ability of the amateur radio repeater system in the Southern Ontario to respond to crisis situations.

During the Earth Hour, the Toronto FM Communications Society net control station operated from an Emergency Management Ontario mobile command center. He logged in excess of 60 stations. All were operating on emergency back-up power sources with some operators in Hamilton to Oshawa and north to Barrie responding. The exercise proved the importance of amateur radio operators and repeater organizations in the event of a widespread disaster.

Toronto FM Communications Society operates repeaters on the CN Tower in Toronto, Ontario as well as at the highest elevation in Southern Ontario atop the Skyloft Ski Resort in Uxbridge, Ontario. More about the group is on line at www.tfmcs.com (eHam, PRWeb)

RESCUE RAFIO: EMCOMMWEST IN RENO NEVADA MAY 2 - 4

If you are into emergency communications and public service, then Reno, Nevada, is the spot to be the weekend of May 2nd to the 4th. Amateur Radio Newslie's Don Carlson, KQ6FM, is in Reno with the details:

--

EMCOMMWEST 2008 is returning to "The Biggest Little City in the World", Reno, Nevada, It will be held at the Circus Circus Hotel in downtown Reno, May 2-4.

This year's keynote speaker will be Dennis Dura, K2DCD Emergency Preparedness and Response Manager from the ARRL headquarters in Newington, CN. Dennis will bring some great information about how we can be better emergency communicators, and use the latest technology and resources available in doing so.

Emcommwest will also feature a special video presentation from Riley Hollingsworth, K4ZDH special council of the FCC's enforcement Bureau, who has agreed to do the video which will be shown at EMCOMMWEST.

Also, Emcommwest will welcome Gordon West, WB6NOA from southern California, who was with us a few years back will return as the Saturday night banquet speaker and also host a forum during the event as an introduction to Emergency Communications, and he will have a display booth set up in the vendor hall. Gordon is also bringing his mobile communications unit for us to see. Banquet seating is limited, so make reservations early!

Forums covering leadership, handling PIO duties during callouts, working with different served agencies, MARS, the latest technology, and many new presentations will highlight this year's event. Emcommwest will also have it's own SPECIAL EVENT STATION, operating on HF, UHF and VHF! Pacific Division Director Bob Vallio, W6RGG will host an ARRL forum on Sunday May 4 with many SM's and other officials taking part.

There will be raffle prizes, including radios, power supply, and many other items along with an all new, larger vendor room and an all day amateur licensing class along with VE testing, so non-ham attendees

can become licensed while they are there. Advance conference and banquet registration is now available online via the website, at www.emcommwest.org. Special room rates are available from Circus Circus, via a link on the website. For information, email your requests to: <mailto:info%40emcommwest.org>info@emcommwest.org We are looking forward to a great
EMCOMMWEST this year!

From the site of Emcommwest in Reno, Nevada, this is Don Carlson, KQ6FM for Amateur Radio Newsline.

--

Again the dates are May 2nd to the 4th at the Circus Circus Hotel and Casino in Reno, Nevada for Emcommwest 2008 -- the premiere ham radio emergency communications show west of the Continental Divide. More information is on the web at www.emcommwest.org (KQ6FM, Emcommwest)

**

ENFORCEMENT: FCC TELLS TWO HAMS TO STAY OFF LOCAL REPEATERS

Two hams in different parts of the country have received warning letters from the FCC. Letters that tell them to stay off of certain repeaters in their respective geographic areas.

In New York, the trustees of the K3TSA 2 meter repeater system had requested in writing that David R. Henry, W2DRH, refrain from use of that repeater. The request was issued as a result of Henry's alleged failure to follow operational rules set forth by the licensee and or the control operators of the repeater and of the FCC rules. The FCC says that Henry had previously been requested to refrain from using the system, but had apparently ignored both verbal and written requests.

The FCC not only warned Henry that any further unauthorized use of him by the repeater will bring enforcement action against his license. It also noted that his license expires on April 21, 2009. It says that his license will not be routinely renewed unless this matter is resolved.

A warning letter has also been sent to Edward R. Drone, W0NYF. In this instance the trustee of the St. Louis and Suburban Radio Club repeaters K0STL, N0TYZ, W0FF and W0SRC had requested in writing that Drone refrain from use of the repeaters. The request was issued as a result of his alleged failure to follow operational rules set forth by the licensee and control operators of the repeaters for their users.

In a conversation with the FCC in February 2008 Drone reportedly acknowledged that he had been directed to stay off of the repeaters and stated that he would comply. However, the FCC says that on March 31st he was heard utilizing the K0STL repeater and reportedly stated that he would not refrain from using it.

Now, in its April 2nd letter to Drone the FCC warns him that it expects him to abide by the request to stay off of the repeaters and any other such request by a repeater licensee, control operator or trustee. It warns W-Zero-N-Y-F that failure to do so will lead to enforcement action that could include revocation of his license , or a modification proceeding to restrict the frequencies on which he may operate.

Drone was also asked to contact FCC rules enforcer Riley Hollingsworth and issues with him. (FCC)

**

RADIO LAW: NEW CALIFORNIA HANDS-FREE MOBILE PHONE LAW MAY IMPACT TWO-WAY RADIO AFTER ALL

California's soon to be in force hands free mobile phone law could impact on two way radio users after all. While a recently released pamphlet released by the states Department of Motor Vehicles states that the use of dedicated two-way radios such as walkie-talkies or Citizen Band radios is not affected by the new hands-free law, there are some who tend to disagree. And because of this two camps of thinking have developed.

Those fearful of the consequences of the new law are of the opinion is that judges will ignore the language in the Department of Motor Vehicles pamphlet. Instead, this group believes that those adjudicating such a case will refer to the actual law which does not generally exempt two-way radio operations from the hands-free provision.

However, a contrary opinion is that the law clearly refers to and is written around wireless telephone handsets and their use. These people note that most two-way radios are not wireless telephones. Also, that even the California Highway Patrol seems to acknowledge that the new law is about Wireless Telephones only.

The bottom line. Its likely that one of these days someone will get ticketed for using a business band radio, a C-B set or even a mobile ham radio station. That will be the test case and we are all going to have to wait and see if it actually happens and what the final outcome will be. More is on-line:

NAMES IN THE NEWS: ARRL'S HARRISON APPOINTED TO AK SCIENCE AND TECHNOLOGY AUTHORITY

A word of congratulations to ARRL President Joel Harrison, W5ZN, who has been appointed to a four year term on the Board of Directors of the Arkansas Science & Technology Authority by Governor Mike Beebe.

The Arkansas Science & Technology Authority was created by statute in 1983 with the mission to bring the benefits of science and advanced technology to the people and state of Arkansas. Harrison's appointment has already been approved by the Arkansas State Senate. (ARRL)

**

NAMES IN THE NEWS: K6JGN NAMED NEWPORT BEACH VOLUNTEER OF THE YEAR

And congratulations also to Ed Karagozian, K6JGN. On March 20th, Karagozian was named as the 2007 Volunteer of the Year for his eighteen-plus years of service with Newport Beach California RACES. The honor was bestowed by the Newport Beach Chamber of Commerce held its 37th Annual Police Appreciation Awards Breakfast (Via e-mail)

**

NAMES IN THE NEWS: N2NT NAMED NEW CQ WW 160M CONTEST DIRECTOR

Veteran contester Andy Blank, N2NT, of Dayton, New Jersey, has been named the new Director of the CQ World Wide 160-Meter Contest. Blank succeeds Dave Thompson, K4JRB, who has decided to retire after 16 years at the helm of the event. (CQ)

**

YHOTY: 2008 NOMINATIONS SOUGHT

And a reminder that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year is now open. Any licensed radio amateur age 18 or younger residing in the United States or Canada is eligible for the award. Full details and both downloadable and on-line nominating forms are in cyberspace at www dot YHOTY dot org. (ARNewsline")

**

THE SOCIAL SCENE: HEIL SOUND HOSTING 2008 NAB HAM RADIO RECEPTION

If you are planning to attend the National Association of Broadcasters Convention, Bob Heil, K9EID, advises that the annual Ham Radio Reception hosted by Heil Sound will be held on Wednesday night, April 16th, from 6:00 to 8:00 p.m. local Las Vegas time.

As usual, the venue in Ballroom B of the Las Vegas Hilton Hotel. The hotel adjoins the Las Vegas Convention Center which is the home of the National Association of Broadcasters gathering. Bob says that there will be lots and lots of prizes and that you never know who might show up. (Heil Sound, K9EID)

**

THE SOCIAL SCENE: REPEATERS FOR HAMS ATTENDING THE NAB CONVENTION IN LAS VEGAS

And the Las Vegas Radio Amateur Club invites you to enjoy the use of our repeaters while you are in town. The club says it will have its UHF and VHF systems linked together most of the time. According to Bill Croghan, WB�KSW, the 2-meter repeater is on 146.94 MHz with a minus 600 kHz offset, and requiring a 100 Hz sub-audible access tone. The 70 cm system operates on 448.500 MHz with its input MHz lower. It too requires a 100 Hz tone. (CGC, WB�KSW)

**

THE SOCIAL SCENE: THE ARRL AT NAB 2008

Also, last but by no means least, the ARRL will have its usual presence at NAB 2008. Look for them in Booth L One off to the left of the main exhibit hall entrance. This years National Association of Broadcasters Convention runs from April 11th to the 17th, at the Las Vegas Convention Center in Las Vegas, Nevada. (CGC, WB�KSW)

**

THE SOCIAL SCENE: SHELBY HAMFEST LOOKING FOR A NEW HOME

The famed Shelby Hamfest is not cancelled. But it is looking for a new home.

Word of the supposed demise of Shelby began spreading across ham radio cyberspace last week. This as bloggers interpreted a newspaper story regarding the inability of the Shelby Amateur Radio Club and the operators of the Cleveland County Fairgrounds to reach agreement on a contract for the 2008 show.

But Susan Melvin, K4ZXN, who is a member of the Shelby Amateur Radio club has posted to QRZ dot com that the blogs are not correct. She says that the Shelby Hamfest has not been cancelled. Rather, the planners are actively seeking a new site for the show.

Melvin adds that as soon as the official word comes, it will be posted on the club's website. Its URL is www.shelbyhamfeast.org. (QRZ.com)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

THE CHANGING OF THE GUARD: AZDEN'S LEW REINBERG, W2BIE - S.K.

Once again the changing of three guard in ham radio continues. This with word that Lew Reinberg, W2BIE, formerly with the Amateur Radio Products division of Azden Communications, has passed away.

Reinberg came to Azden after a long career in the photographic and electronics industries. This, as a final job prior to his full retirement several years ago. He left when Azden announced that the company had decided to exit the ham radio marketplace.

First licensed back in 1954, Reinberg was active on all bands from HF through UHF. He was an avid DX'er and well known in both the New York City and Baltimore, Maryland ham radio communities. He was a fixture with the Long Island Mobile Amateur Radio Club almost since the groups inception and its said that there was a room in Lew's house that wasn't within ear shot of a ham radio or scanner.

Lew Reinberg, W2BIE, is survived by his wife Elaine, W2ECR, and son Steven, N2HOK. Services for W2BIE were held on Monday, March 17th at the Young Israel of West Hempstead Temple on New York City's Long Island. (K2EPM)

**

HAM HAPPENINGS: COMMERATING THE TITANIC

At least two ham radio groups say that they will mark the 96th anniversary of the sinking of the RMS Titanic special event operations. First up is W- Zero-S, which stands for "White Star Line." It will be on the air from the Titanic Museum in Branson, Missouri. 1300 UTC on Saturday, April 12, and conclude at 2400 UTC on Sunday, April 13.

Members of the Nixa Amateur Radio Club and the Southwest Missouri Amateur Radio Club will bring W0S to life along with corporate underwriters Icom, MFJ, MicroLog, Rayfield Communications and Vibroplex. Listen out for this one on SSB, CW, PSK plus some activity on D-Star, EchoLink and IRLP. More information including a full list of frequencies and the QSL route is on-line at www dot wzeros dot com

Alson on tape is special event station W1MGY. It will operate from the Titanic Historical Society Museum in Indian Orchard, Massachusetts. Operation will concentrate on 20 and 40 meters. Listen out for it on April 11-12 from 1400 UTC until 2030 UTC both days QSL' for this one go to the Titanic Historical Society, W1MGY, PO Box 51053, Indian Orchard, MA 01151. (Press releases)

**

WORLDBEAT - ENGLAND: RSGB STAFF MEMBER RUNNING LONDON MARATHON ON STILTS

Meantime. on Sunday April 13th, a Radio Society of Great Britain staff member hopes to set a new world record. That's when Michelle Frost, of the RSGB Commercial department, will be running the London Marathon on four foot high stilts!

Michelle has been stilt-walking for close to ten years but only graduated to the four foot high ones about three years ago. This time around she is taking to her lofty perch to raise money for REACH. This is a U K based charity dedicated to helping children with upper limb deficiencies.

To date, no-one has ever competed in a marathon on stilts and the Guinness Book of Records is reportedly starting a new record category to celebrate. To find out more about Michelle and her charity walk on stilts, go to www.justgiving.com/rainbowdave on the World-Wide-Web. (RSGB)

**

THAT FINAL ITEM: CELEBRATING 1600 WEEKS OF THE AMATEUR RADIO NEWSLINE

And finally this week & Hmmm... How many times have you heard those words on these newscasts? The words "&and finally this week."

Well, if you have been with us since the beginning in 1977, this week marks the 1600th time one of our news anchors has introduced the last story of the week with those words going right back to the days we were the Westlink Radio Network.

It Jim Hendershot, WA6VQP, who originally conceived, produced and voiced the Westlink newscasts. Actually, Westlink was originally intended for one newscast to talk about the pros and cons of the hottest topic of the day. That topic was repeater deregulation:

--

Audio only: Please download and play the mp3 version of the newscast available at www.arnewsline.org

--

That's how it started. And after 70 some off newscasts, Jim Hendershot moved away from Los Angeles, turning the reins of Westlink Radio over to Bill Pasternak, WA6ITF. He in turn solicited the assistance of two friends from NBC News. Broadcast Engineer Bill Orenstein, KH6QX, and the late Alan Kaul, W6RCL:

--

Audio only: Please download and play the mp3 version of the newscast available at www.arnewsline.org

--

Over the years there were many highlights of the world of Amateur Radio that Westlink and then Newsline covered live on tape. Among them the grand opening of the ham radio station on board the Queen Mary Ocean Liner and the first QSO's from its refurbished radio room. That happened back on April 4th of 1979, when the late D-X'er Don Wallace, W6AM, made that opening night contact.

--

Audio only: Please download and play the mp3 version of the newscast available at www.arnewsline.org

--

Then there was the first contact made from the space shuttle Columbia by astronaut Owen Garriott, W5LFL, and Lance Collister, WA1JXN, in Ferenchtown, Montana. That QSO took place on November 28th 1983 and we were the first to bring not only the story, but the sound of the actual contact as well:

--

Audio only: Please download and play the mp3 version of the newscast available at www.arnewsline.org

--

But not all of the stories we covered were happy times. One of the saddest days in ham radio history took place on May 23, 1980. At three minutes into the launch of Amsat's Phase 3 A satellite something went wrong with the French-built launch rocket and the ham radio payload went into the sea:

--

Audio only: Please download and play the mp3 version of the newscast available at www.arnewsline.org

--

Undaunted, within a few weeks Amsat began work on Phase 3B. It would go to space on June 16, 1983 and became the highly successful AMSAT-OSCAR 10. A year later, A Oh 10 was used for the first ever HT to HT repeater to repeater contact and we brought the sound of that historic moment to your repeater and even to your HT:

--

Audio only: Please download and play the mp3 version of the newscast available at www.arnewsline.org

--

Admittedly by today's standards with the Internet, IRLP and Echolink that 1984 repeater interlink using a ham radio satellite sounds kind of crude. But it did open the eyes of many hams who had been conditioned to think of a repeater as a purely local device. Suddenly repeaters had matured to where a 2 watt H-T could be heard nationwide. Eventually the technology of the 1990's and this first part of the 21st century would give a tiny hand held a voice heard around the world.

And so here we are in April of 2008, some 30 years and 8 months after the very first Westlink radio bulletin aired in Los Angeles. Back then, none of us had any idea that it would be here this long and that some of us who were there back then would still be doing it now. But we are and we will continue for as long as you want us. In our book, you are the most important reason that we work to bring you a timely news bulletin every week. And as we say at the end of each newscast, and as we say again today, we thank you for listening.

Im' Jim Davis W2JKD.

Rather nice radio he's made. The technology is exposed, and visible, and it's aesthetics are there for everyone to see. Love them tubes. Nice warm tones against a black surface. I'll give it an A. I'm curious though. One of those tubes had a different glow to it. Would that be a tuning eye tube?

Anyone going to Dayton this year?

I've been going for the past several years, but figuring on around:

175 dollars for gas
325 for room (Wed through Saturday at a good rate)
125 dollars for food (maybe if I do a lot of Micky D's)

I'm looking at 600 plus dollars before I even buy anything. Think I may have to take a pass...

As those fuel costs skyrocket, it might be pretty hard on Dayton in the future.

Not me but then Dayton comes at a realy bad time for me since the snow
here is still not melted enough to to do those spring tasks but those
sorts of number Enay doo seem to be awfully hard on all hamfests
Dayton or otherwise

Sort of; it's a tuning indicator. Same technology, but not round, so it's not an "eye".

That rx isn't just good to look at, it's got some serious performance too. Note the number of poles in the ladder filter, the balanced beam-deflection mixer, etc. Yet it's simple.

Another poster asked about other homebrew sites. Here's what one ham uses:

http://hometown.aol.com/n2ey/myhomepage/

and a receiver he built ~35 years ago:

Southgate Type 4

http://www.qsl.net/k5bcq/Jim/jiminfo.doc
http://www.qsl.net/k5bcq/Jim/SilverRX1.jpg
http://www.qsl.net/k5bcq/Jim/SilverRX2.jpg
http://www.qsl.net/k5bcq/Jim/SilverRX3.jpg
http://www.qsl.net/k5bcq/Jim/SilverRX4.jpg
http://www.qsl.net/k5bcq/Jim/SilverRX5.jpg
http://www.qsl.net/k5bcq/Jim/SilverRX6.jpg

Can you identify the dial drum?

Lots more homebrew stuff on the HBR website.

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup for amateur radio operators and other people having an interest in the Amateur Radio Service, as defined by national regulations and international treaties. Following are the posting guidelines for this newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
    2.1 Netiquette guidelines
    2.2 Posting form requirements
    2.3 Guidelines on signature (.sig) files
    2.4 Guidelines on excessive quoting
    2.5 Guidelines on pointers to outside sources
    2.6 Guidelines regarding questioning someone's suitability to hold an amateur radio license
    2.7 Guidelines regarding name-calling
    2.8 Guidelines regarding civility
    2.9 Other unacceptable topics

---

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur radio operators and other people having an interest in the Amateur Radio

Service. Participants are invited to engage in open discussion of amateur radio issues and exchange information about participating in the hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions and discussions about amateur radio licensing, regulations, tips on various aspects of setting up an amateur radio station, and sharing operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade posts, posts that are off-topic to the Amateur Radio Service, posts promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created

for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:

- Welcome to Usenet!
- Rules for posting to Usenet
- Hints on writing style for Usenet
- A Primer on How to Work With the Usenet Community
- Emily Postnews Answers Your Questions on Netiquette
- Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information

about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html |

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

> Anyone going to Dayton this year?

Not me.

> I've been going for the past several years, but figuring on around:

> 175 dollars for gas

This seemed high to me, so I checked out the distance. For a vehicle that gets ~20 mpg and $3.25 gas it's pretty close.

> 325 for room (Wed through Saturday at a good rate)
> 125 dollars for food (maybe if I do a lot of Micky D's)

The only way I can see to cut that down is to go with a buddy and pack a lunch.....

> I'm looking at 600 plus dollars before I even buy anything. Think I may
> have to take a pass...

> As those fuel costs skyrocket, it might be pretty hard on Dayton in the
> future.

Maybe. But note that even if the price of gas was cut in half tomorrow, the trip would still cost over $500. IMHO the amazing thing is that so many hams from outside the day-trip area go to Dayton.

Actually, gasoline prices aren't really skyrocketing. What's happening is that we've had years and years of gasoline prices not keeping up with inflation, and now they are making up for lost time (and then some).

Here's one interesting analysis:

http://www.energy.ca.gov/gasoline/statistics/gasoline_cpi_adjusted.html

73 de Jim, N2EY

(still miss my old VW Rabbit Diesel - 50+ mpg highway, no ignition noise)

Ok for some, I live in the UK so it'd be a major trip..! I do know people
who've done it though, so maybe one day I'll make it :-)

I factored in 3.40 for gas, and some riding around during the week. The Vitara gets around 28 mpg highway. I won't be surprised if it costs more than that by mid-May.

>> 325 for room (Wed through Saturday at a good rate)

>
>> As those fuel costs skyrocket, it might be pretty hard on Dayton in the future.
>
> Maybe. But note that even if the price of gas was cut in half tomorrow, the trip would still cost over $500. IMHO the amazing thing is that so many hams from outside the day-trip area go to Dayton.

Very true. What happens though is that it hits a trigger point, and a person who might have figured on going someplace might just reconsider it's worth. sometimes it can even jog a person to look at what they are spending. I can get a lot of equipment for that (that total amount of) money, and after 2 years, I can afford that IC-7000 I drool over.

The trade off is that I really do enjoy the interaction with other Hams, the seminars, flea market and ability to talk to the vendors.

> Actually, gasoline prices aren't really skyrocketing. What's happening is that we've had years and years of gasoline prices not keeping up with inflation, and now they are making up for lost time (and then some).

What that doesn't show is the impact of changing driving styles. When I first started driving in the early 70's, most people didn't put anywhere as many miles on their cars as they do now. I used to put less than 10K per year on a vehicle, now it is closer to 30K per annum. Lots of reasons for this, some good, some bad, but when my XYL was driving a Grand Cherokee and I was driving a Windstar, our gasoline bill hit around 600 dollars one month. That was while gas was still in the 2 something dollar range.

So in anticipation of future gas prices and economic conditions, I bought a Vitara, and she bought an Aerio. (we had to buy new cars anyway, so the payment cost is not so relevant.

So while inflation adjusted prices tell one story, total dollars put in the gas tank tell another.

And in all, we're just adjusting ourselves to the new reality, making ends meet. All over the country folks are adjusting.

> (still miss my old VW Rabbit Diesel - 50+ mpg highway, no ignition noise)

Sweet.

Hmm. Try paying UK prices and you'll change your mind..! Not certain of the exact conversion rates as our prices are in litres and I'm not sure of the size of the US gallon, I believe it's slightly smaller than the UK one, but average prices here are around �1.07 per *litre* at the moment, which at current pound/dollar rates makes it around $9 per imperial gallon.

I wish we had your prices..!!

Ivor;

The major difference in price is in the taxes charged by the various
taxing districts.
Remove the taxes and the cost of the petro is about the same world over.

Dave WD9bdZ

Our regular unleaded is currently $3.39 per USG.

Sorry if I wasn't clear.

What I should have written is that *US* gasoline prices aren't really skyrocketing.

> Not certain of
> the exact conversion rates as our prices are in litres and I'm not
> sure of
> the size of the US gallon, I believe it's slightly smaller than the UK

The following were found at various sites (thanks Google):

One US gallon is 3.79 litres. So 1 gallon of gasoline at the price you quote would cost 4.055 pounds.

Today, April 16, 1 pound exchanges to 1.9756 dollars, so 4.055 pounds equals $8.01 for a US gallon of gasoline.

> I wish we had your prices..!!

Thanks for proving my point!

The amateur radio connection in all of this is that inflation hits different things in very different ways, which of course has its effects on us hams. For example, here in the USA, even with the weak dollar, amateur radio transceivers are a better deal than when I became a ham 40 years ago, and probably any time since. Back then the biggest bargain in new ham gear was the $250 Heath HW-101 kit. $250 then equals $1500 now, and for $1500 you can get a lot more rig! (the westegg inflation calculator says a dollar in 1967 bought what about $6 buys today, on average).

If you really want to get sticker shock, check out what the PCs of 10-20 years ago cost, then add in the inflation.

OTOH the cost of a house in many parts of the USA to put the ham rig in has gone up a lot more than a factor of 6, even allowing for the current soft RE market. (A lot of us who aren't retired have to go where the jobs are.)

The result is that we have a lot of US hams today who have great rigs but not houses where they can gave good antennas.

73 de Jim, N2EY

I expect $4/US gallon this summer. $5 wouldn't shock me.

Or an Elecraft K3....

It's part of human spending behavior that some
expenditures are viewed so differently than others.
A few dollars here and there adds up but
doesn't seem the same.

I've never been to Dayton. TImonium is the big one around here. But
it's a haul!

Why so many miles/year on your vehicles?

Indeed.

Total inflation-adjusted dollars for transport is the ultimate
factor.

Even my Prius doesn't get that kind of mileage. And the Diesel was
much simpler. Perhaps the compromise is to do Dayton every other year,
or every third year.

My wife does a lot of local travel for her job. Visiting job sites, doing inspections. Or at least she did. The housing market dried up around here and she's working one day a week now, so that has decreased.

for myself, I do a bit of travel for work also. It's all on my dime.

Well, yes and no. The total cost of living has increased significantly. I'm not talking about the official inflation figures, they aren't reliable any more. This is just the amount of dollar outlay per month. Health insurance doubling in a years time, Gas doubling over a few years time, House escrow account increases of 100 dollars per month.

So while the statistics say we're getting a bargain, ground truth tells me that I have to reel in costs somewhere. Bargain or not, one has significantly less money these days after the bills are paid. And gasoline is one area that I can at least start to control.

Ahh, the Priuii are very cool vehicles. I shoulda known you'd be an owner of one. On a Ham related topic, have you noticed much electrical noise from it? I've heard some scuttle that they make some RFI. Don't know what that is in comparison to a regular gas vehicle, as they can be noisy also.

Luckily diesels are starting to come back to the USA I believe. I (not in the US) have a VW 1.9 diesel engine using abt 4.5liters/100km average per tank (local roads, traffic jams, 60miles one way to work every day). That is 52 miles to the gallon. My car is a bit bigger than the old Rabbit and has over 200.000 miles on it and is over 9 years old.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group and to rec.answers/news.answers every month. You are now reading the second article, which explains how to submit something to rec.radio.info, and which answers some Frequently Asked Questions about the submission process. The first article is titled "Welcome to rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post the article to rec.radio.info, as you would do with any other newsgroup. The difference is that the software recognizes the special status of rec.radio.info as a moderated group, and will e-mail your article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the transparency offered by the newsreading software is probably more convenient.

If you have any questions, or wish to deal with some administrivia with the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have to read it first, give it the stamp of approval, and finally send it on to the group. We will attempt to read and decide on all submissions within 72 hours at the very least, though we will probably be able to process submissions much faster in actual practice.

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions
rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

 Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

 -- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

It still seems like an awfully slow data rate. I have seen people throw 14400 baud modems in the garbage because they considered them to be so slow as to be worthless. A data rate of 42 bps is about 3 orders of magnitude slower than that. It just seems inconsistent with the way that so many hams have fought tooth and nail to hold onto Morse and to hinder the move toward digital modes.

Certainly makes more sense than including AM, FM and RTTY. A lot less money involved, too, well maybe RTTY is about the same as a keyer. But AM and FM require additional filters, additional circuitry, etc., and their following is probably a lot smaller than CW. (obviously, on HF. VHF FM is clearly heavy hitter but not so much on HF, especially at this time of the cycle.)

The negative impact on sales from a comment in a review like, "Great rig, but missing an internal keyer" would offset the tiny cost of including the keyer.

The joy of Morse is not the speed at which data is transferred but the means of transferring. A good Morseist (mot me....) doesn't need a computer or software to decode it.

And I know several Morseists who not only use "high speed data modes' in addition to using Morse, but hold advanced degrees in development of those modes.

Morse is for fun.

Compared to what? And for what application, in what bandwidth?

If you have a pile of data to send, or a picture, etc., 41.66 bps is quite slow.

But for a real-time conversation, 41.66 bps isn't all that slow. The average person doesn't talk or type at a sustained speed much faster than 100 wpm. 50 wpm isn't that much slower.

> I have seen people
> throw 14400 baud modems in the garbage because they

> be so slow as to be worthless.

11 years ago, when I first went online, it was with a 56k modem. I gave up on dialup modems several years ago and went broadband. I don't think anybody who has a choice is still using dialup.

But that's because the options exist, with no significant downsides. A 14400 modem uses the same phone line as a 56K modem. DSL can be run on the same phone line and not tie it up for telephone calls.

Operating on the limited bandwidth amd high variability of the HF amateur bands is a completely different thing.

A lot of hams like Morse Code and use it on the air. It has a lot of advantages. Why should they give it up?

And how has "the move toward digital modes" been hindered by hams?

> It still seems like an awfully slow data rate. I have seen people throw 14400 Baud modems in the garbage because they considered them to be so slow as to be worthless. A data rate of 42 bps is about 3 orders of magnitude slower than that.

Many types of communications vary over many orders of magnitude of information rate, yet are considered useful and up-to-date.

For example, the Casio WaveCeptor on my wrist:

http://www.eham.net/reviews/detail/2497

receives a ~ 1 Baud Pulse Position Modulated (PPM) signal from radio station WWVB in Fort Collins, Colorado, which transmits on 60 kHz. It takes about a minute to send the complete time code to synchronize my watch. Slow? Yes. Useful? Yes, very much so, especially when considering the coverage and reliability that can be obtained from such a low-bandwidth, groundwave-propagated, Very Low Frequency (VLF) signal. The watch only needs to receive the time code at most once per day, which it does so automatically in the early hours of the morning sitting on my desk or dresser. A faster data rate would require something other than a VLF signal, and would not improve much on the quality or usability of the communications. It would definitely increase the price. Witness the much greater success in the marketplace of WWVB-based watches versus more advanced, higher bandwidth, but much more expensive, "Smart Personal Object Technology" (SPOT) watches:

http://www.spotstop.com

One of the most current and widely used communications technologies among young people is cellular telephone text messaging:

http://en.wikipedia.org/wiki/Text_messaging

(sometimes also called "Short Messaging System" or SMS)

According to this recent demonstration on the Tonight Show with Jay Leno:

http://www.youtube.com/watch?v=AhsSgcsTMd4

the realizable data rates are comparable in order of magnitude to that of fast Morse code that can be sent and received by human operators. Just try telling a teenager with an SMS-capable cellular telephone that it should be thrown in the trash because it isn't fast enough, or isn't of sufficiently novel technology, and see his or her reaction.

To give you an amateur radio example, the Automated Position Reporting

System (APRS):

http://www.aprs.org

uses 1200 Baud AFSK packet. Faster, but still an order of magnitude slower than technologies you imply should be thrown out. Since APRS reports important, but compact, telemetry at periodic intervals, the technology meets the requirements of many users utilizing VHF radios and Terminal Node Controllers (TNC's). Again, substituting much higher data rates would really not improve the technology or better meet the requirements of the users which it serves.

To even give you a Morse code example, consider the simplicity and effectiveness of the NCDXF beacons running on the HF bands:

http://www.ncdxf.org/beacons.html

A relatively low data rate On-Off Keyed (OOK) Morse Code signal is able to quickly convey to the listener the quality of the communications link, and required link budget, to various points around the globe. All that is needed to be transmitted is a station identification, and the same symbol (in this case the letter "V") sent at 10 dB power steps from 100 Watts to 0.1 Watt. Complex modulation/demodulation equipment to achieve "orders of magnitude" faster data rates would not only not fit on the HF bands, they would not seem to offer much improvement in the quality of the service.

I suppose one could implement a beacon network using something like PSK31:

http://www.psk31.com/

which might even be able to demonstrate realizable communications link budgets below 0.1 Watt. But even that advanced digital mode would only have data rates comparable to Morse code. Though the NCDXF beacon network is a Morse code service, note that Morse code knowledge is really not necessary to utilize it effectively. A synchronized time base and a chart of which station transmits at which time would enable very fast determination of the link budget to the beacon locations. If you can't remember what a "V" sounds like in Morse Code (". . . _" like the intro to Beethoven's Fifth Symphony), I suppose you could put that on the chart as well. After all, the use of similar charts are how pilots usually decode the Morse code identifications of aeronautical beacons.

There are even a number of excellent software packages linked from the NCDXF site above that could automatically monitor the signals, decode the Morse, and record the quality of the communications paths over time. One such package is Faros:

http://www.dxatlas.com/Faros/

one of many advanced signal processing software packages for amateur radio that exploits the ubiquitousness of of inexpensive personal computers with sound cards in most home ham "shacks."

Focusing simply on information rate disregards other aspects of the communications and the channel over which it is transmitted. These important aspects include the bandwidth and propagation characteristics of the available channel, the complexity of the required transmitting and receiving equipment, the amount of data that needs to be transmitted, and how quickly and often it needs to be conveyed.

Single-attribute measuring contests may be fun, even ego-boosting to some, but are really not very useful or impressive to those who actually design and use practical communications systems.

>It just seems inconsistent with the way
>that so many hams have fought tooth and nail to hold onto Morse and to
>hinder the move toward digital modes.

I'm not sure that I understand your line of reasoning here. You are implying cause-and-effect. In other words, use and advocacy of Morse code somehow directly contributed to the obstruction of other technologies. Can you give direct evidence of specific examples? If you are implying that licensing requirements obstructed the development of advanced digital modes, that really doesn't appear to be the case. Witness the success of Tucson Amateur Packet Radio (TAPR):

http://www.tapr.org

and the Radio Amateur Satellite Corporation:

http://www.amsat.org

which have developed or championed many promising digital technologies, developed by amateurs with widely varying degrees of Morse code operating skills.

Furthermore, if the only technologies that you believe should be saved from being thrown away are those at 14.4 kBaud and up, those technologies are only practically realizable on amateur radio bands at high VHF and up. Such bands have been open to licensees without need of a Morse code test for going on 17 years now. Even before then, these bands were accessible to Technician-class amateurs since at least shortly after World War II, with a license that only required a minimal, 5 WPM (essentially individual character-recognition) Morse code test.

If you are saying that someone *else* should have developed these technologies (other than you, of course), and that since they haven't, then someone *must* be to blame, well, you can't really dictate how the world should turn out without taking an active role to help make it that way.

In your model, only a single axis of data is transmitted - the time of day. That seems like a great deal of infrastructure and energy consumption to transmit a single data quantity. The equivalent infrastructure for weather transmission (marine and air) is even more elaborate and expensive. Can you see that is an outrageously inefficient way to distribute a small quantity of information?

My understanding is that they use SMS for fairly trivial communications, like what they will have for lunch or where they will meet at the mall. A rough equivalence might be SMS users objecting to the use of the SMS system by people who are sitting at full-size computers or by people who have connected keyboards to their phone. If they were to complain that "typing" pidgin English (like "HOW R U?") with your thumbs on a tiny telephone keypad was the one true way to use SMS, then I think I could agree that there was an equivalence.

You might ask those kids why they also use conventional e-mail, despite having SMS availability.

Again, it is for the exchange of a single axis of data - geographic location. Please stop tying to pass off these single purpose, dedicated systems as examples of general purpose communications.

> To even give you a Morse code example, consider the simplicity and
> effectiveness of the NCDXF beacons running on the HF bands:

My understanding is that Morse-based beacon identifications are read by computerized devices and are not "copied" by the pilots. I doubt that you could find very many current pilots who could copy any Morse at all.

There is nothing about that that is unique to Morse. Any type of RF link would be usable in that way.

> Focusing simply on information rate disregards other aspects of the communications and the channel over which it is transmitted. Hams used to deride digital communications as "pulse" and tell tales about the way that it squandered bandwidth. They made it out to be something along the lines of spark-gap. Look for articles about "pulse" communications in old (1960's and 70's) issues of QST and Popular Electronics. Considering the lead time needed to develop a new mode, I think it is unreasonable not to go back at least that far. I believe that the anti-digital curmudgeons delayed the implementation of digital modes by a matter of decades. It is interesting to note that the most widely used digital modes (for 2-way radio, not for broadcast) were developed either in Japan (Icom/JARL DV) or under the auspices of a police organization that has no ties to radio, except as consumers (APCO

25).

> [...]
> Furthermore, if the only technologies that you believe should be saved

Can you point to something in my post that makes such a claim? The only technology that I have derided as being too slow as to have value is Morse code that is sent by hand (less than 100 baud). The Navy shut down its VLF network on the grounds that the data rate was inadequate. Perhaps it is time for the amateur community to take a similar step.

That last paragraph is incoherent. Could you rephrase it?

> of day. That seems like a great deal of infrastructure and energy
> consumption to transmit a single data quantity.

Actually, it's a very small infrastructure, and very efficient. I've been there, btw.

The time standard info is already present at the WWVB transmitter site, so that's no cost. All that's necessary is a system to encode it, and the WWVB transmitter and antenna. While an impressive installation by amateur radio standards, the WWVB transmitter is not overly large for the wavelength.

But WWVB's 60 kHz signal serves large numbers of clocks of many types all over North America - by radio. It keeps them all synchronized via radio, without any user intervention.

What alternative technology would do the same job with less infrastructure and energy consumption?

> The equivalent
> infrastructure for weather transmission (marine and air) is
> even more elaborate and expensive.

Of course. But it's also very important from a safety standpoint.

> Can you see that is an outrageously inefficient
> way to distribute a small quantity of information?

What alternative technology would do the same job with greater efficiency?

> > One of the most current and widely used
> > communications technologies
> > among young people

Not just "young people". A lot us find text messaging very useful.

>is cellular telephone text messaging:

> >http://en.wikipedia.org/wiki/Text_messaging

> > (sometimes also called "Short Messaging System" or SMS)

> > the realizable data rates are comparable in order of magnitude > > to th
at
> > of fast Morse code that can be sent and received by human
> > operators.

The facts are even more telling.

In that Leno clip, the text messager is the Guinness-book world-record-holder. The Morse Code ops are a couple of hams who were going less than 30 wpm - which is less than 40% of the world-record Morse Code speed.

The text messager was allowed to use common text-message abbreviations, while the Morse Code ops just sent the straight text with no abbreviations at all.

The Morse Code ops also produced a hard-copy in real time.

IMHO, what was most telling was that the audience was sure the text messager would win. But a much older technology proved to be faster.

> > Just try telling a teenager with an SMS-capable cellular
> > telephone that
> > it should be thrown in the trash because it isn't fast
> > enough, or isn't
> > of sufficiently novel technology, and see his or her reaction.

The answer will be that it's fast enough for what it's used for.

Isn't that the ultimate test of any technology - that it's good enough for what it's used for?

> My understanding is that they use SMS for fairly trivial
> communications, like what they will have for lunch or
> where they will meet at the mall.

I can say for a fact that's not true. While a lot of text - and cell phone - communications is trivial, much is not. For example, something as simple as a meeting place or time can be critical information.

> A rough equivalence might be SMS users objecting to
> the use of the SMS system by people who are sitting at full-size
> computers or by people who have connected keyboards to their
> phone.

Actually the system can be used that way, in that a message generated by a cell can be delivered as an email, and the reverse.

The point is that speed isn't the only criterion.

> > To give you an amateur radio example, the Automated Position > > Reporting

No one is trying to do that. The point being made is that speed
is not the only criterion.

What is meant by "general purpose communications"? My computer
allows internet access, email and some other things, but I still have
POTS and a cell phone. TV and radio come to my house over the air.

> > I'm not sure that I understand your line of reasoning here.

> > examples?
>
> Hams used to deride digital communications as "pulse"
> and tell tales
> about the way that it squandered bandwidth.

I don't know any hams who used the term "pulse" to refer to
digital communications. Nor have I heard tales about squandered
bandwidth.

However, note that not all digital signals are designed with
bandwidth efficiency as the primary consideration. For
example, classic 850 Hz shift 45.45 baud RTTY uses almost
a kHz of band to transmit about the same info (actually
less) as PSK31 which uses maybe 50 Hz.

> They made it out to be
> something along the lines of spark-gap.

If you mean spark, I have not seen that comparison anywhere.
Could you provide a specific reference?

> Look for articles about "pulse"
> communications in old (1960's and 70's) issues of QST and
> Popular Electronics.

I have all the QSTs back to the mid-1920s, and have read all
of them. I do not recall any comparison of digital modes to
"pulse" in any of them. Could you provide a specific reference?

I do recall some QST articles back in the 1950s *advocating* pulse
modes for use at microwave frequencies. The idea was that
rather than trying to adapt lower frequency narrow band techniques to
the microwave bands, broadband/radar techniques would be used for
communications.

> Considering the lead time needed to develop a new mode, I
> think it is unreasonable not to go back at least that far.

PSK31 was developed in a few years by G3PLX and a small group of hams
around the world. Lots of other examples.

> I believe
> that the anti-digital curmudgeons delayed the implementation of
> digital
> modes by a matter of decades.

How was this done?

The main impediments to the implementation of digital modes by
amateurs (at least in the USA) were two:

1) Restrictive regulations, brought about mostly by the FCC's need
to be able to monitor amateur transmissions. However, note that
digital transmissions other than digital voice are not allowed in the
US HF 'phone subbands - which comprise the majority of the
bandwidth on those bands. Those rules force the digital
data modes to share only with Morse Code users.

2) The high cost of hardware. Only a decade ago, a PC
was a significant investment compared to a ham rig.

> It is interesting to note that the most
> widely used digital modes (for 2-way radio, not for broadcast)
> were
> developed either in Japan (Icom/JARL DV) or under the auspices
> of a
> police organization that has no ties to radio, except as consumers > (APCO
25).

They were developed for specific applications, though. Not for general
purpose use.

> > Furthermore, if the only technologies that you believe
> > should be saved
> > from being thrown away are those at 14.4 kBaud and up,
>
> Can you point to something in my post that makes such a claim?

The statement about throwing 14400 modems in the garbage.

> The
> only technology that I have derided as being too slow as to have
> value
> is Morse code that is sent by hand (less than 100 baud).

PSK31 and most HF RTTY are also less than 100 baud. Are they
too slow to have value?

> The Navy shut
> down its VLF network on the grounds that the data rate
> was inadequate.

But amateur radio isn't the US Navy. IIRC, the purpose of that
network was/is to communicate one-way to submerged missile
submarines.

> Perhaps it is time for the amateur community to take a similar
> step.

What form would that step take? Should amateurs simply not
use Morse Code any more?

The *test* for the mode was an issue of great contention among
radio amateurs. But until July 2003 the ITU-R treaty prevented
complete elimination of the *test*.

However, as far back as 1990 it was possible to get any US
amateur radio license with just a basic 5 wpm Morse Code
test and a doctor's note. Since April 2000, no doctor's note
has been needed, and since Feb 2007 no Morse Code test
at all.

How any of this has impeded the development or implementation
of digital modes is unclear to me.

> > those
> > technologies are only practically realizable on amateur radio
> > bands at

> > at least

> > shortly after World War II, with a license that only required
> > a minimal,
> > 5 WPM (essentially individual character-recognition)
> > Morse code test.

The Technician class license was created in 1951. Its Morse Code test was always 5 wpm, until it was dropped completely in 1991.

IOW, as has been pointed out, practically all of the US amateur bands above 30 MHz have been available for the development and implementation of digital modes by amateurs, with no need for any Morse Code test. Lots of bandwidth, too - all those bands except 222-225 are wider than all the HF/MF amateur bands combined.

Transmitting 50 kilowatts from a single site capable of covering most of
North America, using groundwave propagation, independent of solar
```

activity, is an "outrageously inefficient way to distribute a small quantity of information?" Well, I do hope that you are hurrying to write your Congressman to demand that the National Institute of Standards and Technology put an immediate end to this grave outrage, and profound waste of taxpayer's money that has been going on for decades. After all, what does the NIST know about technology, or useful communications? Perhaps as little as the engineers and marketers in the economically successful and useful product field of WWVB watches and clocks, in your estimation.

I think you are underestimating the power of SMS. As for the comparison to E-mail, I don't have to ask, as journalists have already done so, including this recent article from Slate:

http://www.slate.com/id/2177969/pagenum/all/

Simply put, young people find appeal in the immediacy of small, but low-latency messages sent in relatively large numbers over a long period of time, and the information transmitted is far more rich and meaningful that what you imply above. In many respects, this type of communication is not stilted or limited, but almost provides the immediacy of a conversation, without having to run up your voice minute charges or leave your other callers unable to reach you due to the long-term busy signal.

Young people do still use E-mail, but in circumstances for which it is the better choice. They are not seeking some overall best "general purpose communications" to get their messages across to each other.

I didn't realize that only "general purpose communications" were considered worthwhile. Your previous reply argued that it was undesirable to use such a low-speed technology as Morse code given that there were many higher-speed alternatives (faster by "orders of magnitude" you said). I replied to you that fastest is not always best. Other issues (previously enumerated by me) might actually dictate the choice of lower-speed communications as the best choice.

I also don't see "general purpose communications" mentioned in Part 97. Many "single purpose, dedicated systems" are used by amateurs, and help fulfill amateur radio's Basis and Purpose. In many cases, a "single purpose" technology is far more useful than a misfit, one-size-fits-all, "general purpose" one.

Before we make too many assumptions about an undefined term, perhaps you can describe what types of "general purpose communications" you would consider to be worthy goals for the Amateur Radio Service, and which "single purpose" technologies you would like to see eliminated?

Would you also kindly define what is a "single axis of data," in terms familiar to those involved in communications engineering and technology? What, then, would be "multiple axes of data?"

>> To even give you a Morse code example, consider the simplicity and

So, in other words, you are actually agreeing with my previous reply to you that there are many useful Morse code based communications technologies that do not actually require memorized, in-head, copy of Morse code. I'm glad that we agree on something.

>link would be usable in that way.

Yes. That is somehow a point of disagreement between us? In what way?

I did acknowledge that you could re-engineer the NCDXF beacon system with one that uses, say, PSK31, but the bandwidth and data rate limits would still remain. A PC with a soundcard would still be usable for that system, as you note. I'm sure that the author of Faros could also quickly adapt, and make a PSK31 version of his NCDXF beacon recording software package.

> Hams used to deride digital communications as "pulse" and tell tales about the way that it squandered bandwidth. They made it out to be something along the lines of spark-gap. Look for articles about "pulse" communications in old (1960's and 70's) issues of QST and Popular Electronics. Considering the lead time needed to develop a new mode, I think it is unreasonable not to go back at least that far. I believe that the anti-digital curmudgeons delayed the implementation of digital modes by a matter of decades. It is interesting to note that the most widely used digital modes (for 2-way radio, not for broadcast) were developed either in Japan (Icom/JARL DV) or under the auspices of a police organization that has no ties to radio, except as consumers (APCO 25).

Wow, these curmudgeons must have been very powerful and effective in their obstructionism if they undermined entire areas of communications technology development in this country over the last 30-40 years. I didn't realize that our national technology infrastructure was so inflexible and lethargic that it could not recover from these influences, even after so many decades.

>> [...]
>> Furthermore, if the only technologies that you believe should be saved from being thrown away are those at 14.4 kBaud and up,

> Can you point to something in my post that makes such a claim?

Just the introduction to your previous article, where you directly compare the Baud rate of Morse code with that of "obsolete" telephone modems. You stated that their data rates differed by "orders of magnitude," implying that communications technologies that were "orders of magnitude" slower than telephone modems could be dismissed as obsolete. Following the natural extension of that argument, then the only technologies that could be favorably compared to such telephone modems, and meet your argued standard of non-obsolete, could only be realized on high VHF and up. As I argued previously, use and advocacy of Morse code has no bearing on the current deployment of such technologies, as no Morse code test has been required to access them for at least 17 years. The Technician-class license has existed for far longer, and has only a minimal Morse code examination.

> The only technology that I have derided as being too slow as to have value is Morse code that is sent by hand (less than 100 baud).

So, to summarize:

slow-speed (less than 100 baud) PSK31 : "Good"

similar order-of-magnitude speed Morse code: "Bad"

So, it's not the speed you object to, it's the use of Morse code? Couldn't you have just stated that, and not gone to the trouble of bringing in other arguments like speed and bandwidth, or whether a communications technology is sufficiently "general purpose" or not, regardless of whether something "general purpose" would be the best choice in a given circumstance? Just say that you don't like Morse code. Others would at least give you credit for honesty.

>The Navy shut
>down its VLF network on the grounds that the data rate was inadequate.
>Perhaps it is time for the amateur community to take a similar step.

References please? A Google search returns no evidence that Navy stations like NAA in Cutler, Maine have gone off-line. Are you possibly thinking of their ELF experiments that were recently ended? Even if so, what competing technology is the Navy contemplating that will reliably contact our submarine fleet that has "gone deep" under many fathoms of RF-attenuating sea water?

I also didn't realize that amateur radio had similar "networks" that would need to be shut down.

>> those

>> then someone *must* be to blame, well, you can't really dictate how the
>> world should turn out without taking an active role to help make it that
>> way.

>   That last paragraph is incoherent. Could you rephrase it?

Looked pretty coherent to me, but for your benefit, I'll dissect it in detail:

"If you are saying that someone *else* should have developed these technologies ..."

In other words, amateur radio has failed to meet some standard of technology development. Other people were somehow "wasting" their time doing other things.

"... (other than you, of course) ..."

What have you done to make amateur radio a better place? Have you written your Congressman? Petitioned the FCC? Worked in the communications engineering and technology field? Developed amateur radio software and hardware solutions? You seem to be knowledgeable on many technical subjects, including the history of that technology over many decades. Did you try to change things, or are you asserting that you did not have the skills or abilities to help do so, even working with others over many decades?

"... and since they haven't, then someone *must* be blamed, ..."

I was implying that you were seeking scapegoats, as it is easier to blame others than look in the mirror.

"... well, you can't really dictate how the world should turn out without taking an active role to help make it that way."

In other words, Lead, Follow, or Get Out of the Way. "Sidewalk Superintendents" have very little influence on society. What is your choice?

Also, some people seem to confuse actual solutions to problems (whether in amateur radio, or on the newsgroups) with a contest over who can become the most "outraged." To quote Jim Kelley, AC6XG:

"Outrage, and a buck-fifty, will get us exactly what?"

The only "pulse" reference that comes to mind is the pre-1979 emission
designator for what we now call "digital modulation" in the
International Radio Regulations. Nobody that I know, amateur or
professional (and most of the amateurs were professional communication
engineers) ever put it down.

Paul W. Schleck <pschleck@oasis.novia.net>" wrote:

> Transmitting 50 kilowatts from a single site capable of covering most of North America, using groundwave propagation, independent of solar activity, is an "outrageously inefficient way to distribute a small quantity of information?" Well, I do hope that you are hurrying to write your Congressman to demand that the National Institute of Standards and Technology put an immediate end to this grave outrage, and profound waste of taxpayer's money that has been going on for decades. After all, what does the NIST know about technology, or useful communications? Perhaps as little as the engineers and marketers in the economically successful and useful product field of WWVB watches and clocks, in your estimation.

Wouldn't it make more sense to include WWV and WWVH along with WWVB? Are you familiar with the Internet-based ntp system? Then, there is the matter of GPS, which has a time capability that is incidental to its navigation function.

> [...]
> I think you are underestimating the power of SMS. As for the comparison to E-mail, I don't have to ask, as journalists have already done so, including this recent article from Slate:
>
> http://www.slate.com/id/2177969/pagenum/all/
>
> Simply put, young people find appeal in the immediacy of small, but low-latency messages sent in relatively large numbers over a long period of time, and the information transmitted is far more rich and meaningful that what you imply above. In many respects, this type of communication is not stilted or limited, but almost provides the immediacy of a conversation, without having to run up your voice minute charges or leave your other callers unable to reach you due to the long-term busy signal.
>
> Young people do still use E-mail, but in circumstances for which it is the better choice. They are not seeking some overall best "general purpose communications" to get their messages across to each other.

I don't see anything in that that contradicts my statement that SMS is mainly used for messages of little importance. It is also called CMS, for casual messaging service.

> I didn't realize that only "general purpose communications" were considered worthwhile.

A multi-purpose system that can match a single-purpose system on the performance of the objectives of the single-purpose system is generally, if not universally, considered superior.

> Your previous reply argued that it was undesirable to use such a low-speed technology as Morse code given that there were many higher-speed alternatives (faster by "orders of magnitude" you said). I replied to you that fastest is not always best. Other issues (previously enumerated by me) might actually dictate the choice of lower-speed communications as the best choice.
>
> I also don't see "general purpose communications" mentioned in Part 97. Many "single purpose, dedicated systems" are used by amateurs, and help fulfill amateur radio's Basis and Purpose. In many cases, a "single purpose" technology is far more useful than a misfit, one-size-fits-all, "general purpose" one.
>
> Before we make too many assumptions about an undefined term, perhaps you can describe what types of "general purpose communications" you would consider to be worthy goals for the Amateur Radio Service, and which "single purpose" technologies you would like to see eliminated?

Why do you want me to reinvent the wheel? Lets go to the source (condensed from Part 97.1):

- emergency communications
- contribute to the advancement of the radio art
- advancing skills in both the communication and technical phases of the art
- expansion of the existing reservoir within the amateur radio service of trained operators, technicians, and electronics experts
- continuation and extension of the amateurs unique ability to enhance international goodwill

> Would you also kindly define what is a "single axis of data," in terms familiar to those involved in communications engineering and technology?

A single quantity, like time or location

> What, then, would be "multiple axes of data?"

Two or more simultaneous quantities, like time AND location or course AND speed.

> So, in other words, you are actually agreeing with my previous reply to
> you that there are many useful Morse code based communications
> technologies that do not actually require memorized, in-head, copy of
> Morse code. I'm glad that we agree on something.

There is probably no purpose for which Morse can be used as a machine language where there isn't a choice of other, better suited languages available. This includes aeronautical beacons. You are grasping at straws, now.

> Wow, these curmudgeons must have been very powerful and effective in
> their obstructionism if they undermined entire areas of communications
> technology development in this country over the last 30-40 years. I
> didn't realize that our national technology infrastructure was so
> inflexible and lethargic that it could not recover from these
> influences, even after so many decades.

When you look at the development of the Internet, Linux and other free software, you have to wonder about the infrastructure behind it. How did it come about? There was no regulatory body. There were no licenses. There were no "Elmers." Until recently, there wasn't even any formal schooling available, except on the sort of machinery that existed only within the Fortune 500. Early Internet users and developers had to read O'Reilly books and figure it out on their own.

That showed great initiative. It demonstrated the sort of determined, driven advancement of technology that was once seen in amateur radio. But that sort of thing has passed ham radio by. It has been a long time since ham radio was a source of innovation. I blame the Morse cultists who hijacked amateur radio for use as their personal playground.

> Just the introduction to your previous article, where you directly
> compare the Baud rate of Morse code with that of "obsolete" telephone
> modems. You stated that their data rates differed by "orders of
> magnitude," implying that communications technologies that were "orders
> of magnitude" slower than telephone modems could be dismissed as
> obsolete.

An amusing interpretation. It follows that trains and ships should be discarded because they are much slower than airplanes.

> Following the natural extension of that argument, then the only technologies that could be favorably compared to such telephone modems, and meet your argued standard of non-obsolete, could only be realized on high VHF and up. As I argued previously, use and advocacy of Morse code has no bearing on the current deployment of such technologies, as no Morse code test has been required to access them for at least 17 years. The Technician-class license has existed for far longer, and has only a minimal Morse code examination.

You left out the faster mode of communication known as "voice." It is widely used on HF. Further, I once looked at a band plan that showed how DV could be used on HF. They described a system of HF DV that took up just slightly more bandwidth than SSB and substantially less than AM.

> So, to summarize:
>
> slow-speed (less than 100 baud) PSK31 : "Good"
>
> similar order-of-magnitude speed Morse code: "Bad"
>
> So, it's not the speed you object to, it's the use of Morse code? Couldn't you have just stated that, and not gone to the trouble of bringing in other arguments like speed and bandwidth, or whether a communications technology is sufficiently "general purpose" or not, regardless of whether something "general purpose" would be the best choice in a given circumstance? Just say that you don't like Morse code. Others would at least give you credit for honesty.

Who are these "others" and when did they appoint you as their spokesman?

> References please? A Google search returns no evidence that Navy stations like NAA in Cutler, Maine have gone off-line. Are you possibly thinking of their ELF experiments that were recently ended? Even if so, what competing technology is the Navy contemplating that will reliably contact our submarine fleet that has "gone deep" under many fathoms of RF-attenuating sea water?

I am thinking of the site in the Upper Peninsula of Michigan and the increased reliance on TACAMO aircraft (at the time of the shutdown).

> I also didn't realize that amateur radio had similar "networks" that would need to be shut down.

The infrastructure that is being wasted on Morse includes band segments that have, until recently, been reserved for its exclusive use. I am very glad to see that almost all CW segments now allow data modes (50-50.1 and 144-144.1 being the only exceptions). There is also the inclusion of keyer provisions in HF radios. It will be interesting to see what the marketplace does to code tapes and code keys. I don't think they will last long.

While Morse supporters often point to treaties, the fact is that the US was one of the last countries to abandon the Morse requirement for an HF license. Other countries began dropping that requirement many years earlier, while still claiming to be in compliance with their treaty obligations. How do you explain that? To me, it sounds like the FCC used the treaties as a pretext to keep the code requirement in order to placate the ARRL and the Morse zealots.

> Looked pretty coherent to me, but for your benefit, I'll dissect it in detail:
>
> "If you are saying that someone *else* should have developed these technologies ..."

> In other words, amateur radio has failed to meet some standard of technology development. Other people were somehow "wasting" their time doing other things.
>
> "... (other than you, of course) ..."
>
> What have you done to make amateur radio a better place? Have you written your Congressman? Petitioned the FCC? Worked in the communications engineering and technology field? Developed amateur radio software and hardware solutions? You seem to be knowledgeable on many technical subjects, including the history of that technology over many decades. Did you try to change things, or are you asserting that you did not have the skills or abilities to help do so, even working with others over many decades?

I have worked in the electronics industry. I have made my views clear to any and all who had an interest in the subject. I made those views as clear then as I have done in this newsgroup.

> "... and since they haven't, then someone *must* be blamed, ..."
>
> I was implying that you were seeking scapegoats, as it is easier to blame others than look in the mirror.

Good mention, Paul. Ummm...the data rate is rather exactly one bit per second and takes exactly 60 seconds to send one frame of time and date data. :-)

ALL the details are given at www.nist.gov under the 'Time Frequency' page, including propagation charts at various times of the day and for various seasons. This southern California region can regularly receive enough signal to set radio clocks even if at an approximate distance of about 900 miles to Fort Collins. In 2005 my wife and I drove to southern Wisconsin and my La Crosse radio wristwatch never failed to set itself properly even though some of our overnight stays were in hotels having steel structures or in among other buildings.

We have two radio wall clocks in our residence and those are exact enough to compare on-the-second with HF time ticks from WWV and WWVH.

[I won't quibble about the PPM mode descriptor since the full details of modulation are given at NIST website... :-)]

>According to this recent demonstration on the Tonight Show with Jay
>Leno:
>
>http://www.youtube.com/watch?v=AhsSgcsTMd4

Ahem...<quibble mode on>...that little bit on the Tonight Show was a 'setup' gig that employed two young local male actors as the (described) "text messaging experts" but the two hams (one of which would very soon become marketing director for Heil Sound) were real. That is the input I got directly from a reliable staffer on the Tonight Show. Took a few phone calls to get that information but it is an advantage of living inside the entertainment capital of the USA (aka Los Angeles, CA)...and the NBC western Hq is only about 5 miles south of my place, down Hollywood Way to Alameda and then east about a mile. That whole bit was really a send-up on the popular fad of text messaging done by teeners and young adults.

That bit is about as 'real documentary' as Leno's send-ups on the 'street interviews' with ordinary (apparently clueless) younger folk on various kinds of knowledge. In short, ONLY for gag purposes.

>To even give you a Morse code example, consider the simplicity and
>effectiveness of the NCDXF beacons running on the HF bands:
>
>http://www.ncdxf.org/beacons.html

HF beacons are neat for their purposes of checking on HF propagation paths, but they aren't 'communications' in the regular sense. Those were also designed for simplicity at the various receiving sites but require rather precise time-of-day at each receiver in order to get the start of each cycle.

While I had not intended to restart some morse-vs-others kind of argument, I have to note where I began HF communications with the US military some 55 years ago. Not a single communications circuit used any form of morse coding to achieve a throughput of nearly a quarter of a million messages per month (average in 1955). The majority was teleprinter of the 5-level 'Baudot' format running at 60 WPM equivalent rates. 24/7 of course with TTY distributors to to automatically start another p-tape reader when the other reader was done. FSK 'spread' was then 850 cycles, not the narrower 170 Hz of today. Radio circuits (where I was assigned) spanned the northern Pacific from Saigon, Seoul, and Manila to Anchorage, Seattle, San Francisco, and Hawaii.

In 1955 the Army tried an experiment on a few select radio circuits to push the Teletype Corporation's machines to 75 WPM equivalent. End result of that was a failure rate more than double that of the standard 60 WPM equivalent machines. Teletype seems to have achieved an optimized design for 60 WPM equivalent; their 100 WPM equivalent next-generation machines used a different electromechanical system, were quite reliable at that rate.

>beacons.

Quibble mode on again. The LF aeronautical beacoms are what you are writing about but they are NOT used much at all for aircraft radionavigation now, nor were they a half century ago. Present-day (and in 1962) radionavigation over land is done mainly by VOR (Very high frequency Omnidirectional Radio range) using a unique 30 Hz antenna pattern rotation with a reference phase of 30 Hz sent on a 9.96 KHz subcarrier. Aircraft VOR receivers have used very simple (even for tube circuits) to determine their bearing to a ground station. These were simple enough (and low cost enough) for small private general aviation craft and the US VOR system was adopted internationally in 1955. For distance to a ground station the civil method emplyed a low L-band interrogator sending a (jittered) double pulse and measuring the return delay (plus 50 uSec) from the ground station responder. This DME (Distance Measuring Equipment) was compatible with military TACAN (TACtical Area Navigation) signal format and the FAA combined VOR-DME-TACAN equipments on the ground and those are identified by the contraction VORTAC. On aeronautical charts (from the government, usually reprinted by private companies) there is usually a magnetic bearing compass circle (VOR and civil-use-TACAN reference magnetic reference, not actual north reference)...the VHF frequencies (DME and TACAN frequencies have been paired with VOR), ICAO 3-letter ID, and the dot-dash pattern of that 3-letter ID.

The elegant simplicity of VOR is that it will permit AM Voice IN the ground station transmitter without disturbing the antenna pattern modulation or the reference phase subcarrier. In congested urban areas where a lot of general aviation aircraft abound, FAA stations routinely use VOR voice transmissions to aid civil pilots, easing the pilots' workload by providing extra information such as WX, special conditions at an airport. My local airport (BUR) now known as Bob Hope Airport, the FAA used to send a repeating voice announcement of local WX conditions, airport info, etc., all identified by a letter, beginning with A or Alpha at midnight. The tag on the voice tape loop was "please tell the tower you have received 'information <Foxtrot or whatever letter>'" when requesting landing at that airport. Yes, some VORs transmit the ICAO 3-letter ID as a low-modulation on-off tone in slow morse but I have yet to

find any civil pilot, beginner to experienced, who USES that code
for radionavigation.

>Focusing simply on information rate disregards other aspects of the
>communications and the channel over which it is transmitted. These
>important aspects include the bandwidth and propagation characteristics
>of the available channel, the complexity of the required transmitting
>and receiving equipment, the amount of data that needs to be
>transmitted, and how quickly and often it needs to be conveyed.

Martinez' PSK31 was rather precisely designed for low (<500 Hz)
bandwidth coincident with non-typists typing rate of about 30 WPM
equivalent, all in congested Data slices of amateur radio band
'bandplans' on HF. With relatively simple electronic terminal
equipment with microprocessor-aided operation, I/O memory space
and programming is a minor addition to handle faster typists'
input, even burst typing on a keyboard to 100 WPM or so equivalent.

The OLD FSK bandwidths on HF (of a half century ago) took up about
a whole KHz while using an 850 cycle shift. On the 3 KHz of an old
commercial-format SSB channel (one of four), as many as 8 separate
TTY circuits could be frequency-multiplexed. A more reasonable
shift (to 170 Hz) occurred later with improvements in terminal
equipment technology, is the norm now, even for 100 WPM equivalent
teleprinter rates of those still using electromechanical terminals.

BANDWIDTH occupancy seems to be the primary driver for modulation
rates on HF. YMMV.

There are more complex methods of modulation-demodulation that
have been available for some time. DRM (Digital Radio Mondial) is
one such as has been verified on HF for 'SW BC' (Broadcasting).
That DRM has not spread well among broadcasters has little to do
with technical details of modulation-demodulation, but rather in
the poor propagation conditions of this sunspot cycle limiting
broadcasters' range. If a signal can't get through at all, NO
modulation method is going to help. Besides, with the availability
of satellite radio broadcasting, 'SW BC' has gradually shifted
over to that method rather than using HF directly.

>I'm not sure that I understand your line of reasoning here. You are
>implying cause-and-effect. In other words, use and advocacy of Morse
>code somehow directly contributed to the obstruction of other
>technologies. Can you give direct evidence of specific examples? If
>you are implying that licensing requirements obstructed the development
>of advanced digital modes, that really doesn't appear to be the case.
>Witness the success of Tucson Amateur Packet Radio (TAPR):

It is disingenuous to 'force' an argument by introduction of
something not overtly stated by the originator.

TAPR and its membership have done some excellent technical development and spread of such technology. Note also that its membership is made up of radio amateurs who've been licensed for a while and are NOT technical beginners in radio or electronics.

In the view of the ENTIRE world of radio, not just amateur radio, the use of morse code modes to communicate has steadily decreased for over a half century. It has decreased so much so that some non-amateur radio services either stopped using that mode or never considered it for a new radio service introduced in the last half century. As a prime example, the changeover to GMDSS and replacement of the old 500 KHz international distress and safety frequency which used morse code exclusively. Even the USCG stopped monitoring that old 500 KHz frequency. GMDSS was designed and approved by the Maritime Community, not by amateurs.

The decline, or perhaps more accurately, the failure to keep up with overall population increase (of USA) amateur licensees is (in my opinion) NOT due exclusively to 'USE' of morse code. US amateur radio license totals peaked 5 years ago. In general, by informal polling, newcomers are NOT embracing morse code modes...nor are they flocking to HF amateur bands. PART of that MAY be due to the insistence of the 'amateur radio community' to hang onto the morse code TEST forever. Part of that is due to the slow acceptance of international amateur radio to change the international amateur Radio Regulations away from old standards. WRC-03 of nearly 5 years ago allowed individual administrations to drop the morse code test for an amateur radio license. The USA did not follow through on that until more than 3 years later. [precisely, the end of July 2003 to 23 February 2007]

[in response to 'Klystron']

>If you are saying that someone *else* should have developed these
>technologies (other than you, of course), and that since they haven't,
>then someone *must* be to blame, well, you can't really dictate how the
>world should turn out without taking an active role to help make it that
>way.

That's rather strong wording from a leading person of this newsgroup, isn't it?

For a very long while, ever since I first began as a pro in HF radio communications, PART of the 'amateur radio community' had been very busy 'dictating' how the amateur radio world should be by the continuation of the morse code test for an amateur radio license. OTHERS, including those of us (like myself) who were NOT licensed in amateur radio have actively campaigned to remove that test from US amateur radio...even though other countries had already preceded the USA in abolishing that code test. I won't say that I've 'been responsible' for any USA changes but I was certainly 'active' in trying to do so. The FCC apparently agreed with some of my views as well as so many others supporting that test elimination. It came to pass. But, that coming might have been too late to change others' interests in US amateur radio.

In my electronics work that began (professionally) in 1952, I've
been involved in a lot of different electronics and modes and
modulations of RF that were never allocated for US amateur radio
use. Some of those just wouldn't apply to two-way communications but
others would apply. There are still some US regulations that need
altering but a very vocal PART of the 'amateur radio community'
seems very adamant about NOT upsetting the status quo. The future
of US amateur radio does NOT depend solely on them.

73, Len AF6AY
First licensed in US amateur radio in March 2007
First licensed in US commercial radio in March 1956
First QSY of a 1 KW HF transmitter in February 1953

Want some fun? Compare the time ticks received from WWVB, WWV, NIST-on-line, and GPS. What, they are not all simultaneous? Welcome to the real world. GPS time does not correlate with UTC by any means (several seconds difference).

In one of the first digital military command and control system that I was involved in during the early 1960s, we used rubidium standards at our switching centers to get accurate time synchronization, and even then it was rather crude because the line delays varied so much. HF propagation (WWV/WWVH) is even worse in that regard.

As those of us who had our ears to the hull, so to speak, know very
well, the main reason was to get rid of "Sparks the Radio Operator"
who was a very large expense for the traffic that was being handled by
non-Morse methods. Some could be retrained as service technicians,
many could not and took retirement.

Be aware, though, that there are still several Public Coast Stations
in the US that are capable and do handle Morse traffic, and twice a
year the USCG fires up its Morse stations. It's not all dead.

I've compared each of our three radio-set clocks at this residence (in
Los Angeles) and find excellent correlation between their one-second
changes and both WWV and WWVH. Don't have any GPS receiver
to try the same.

In 1960, while working in the Standards Lab of Ramo-Wooldridge Corp.
in Canoga Park, CA, I got to pull some OT on Saturdays to measure
the difference between east coast transmissions of WWV and the
local General Radio frequency standard. Just a plain old quartz
crystal standard oscillator driving divider chains to the built-in
clock.
I would record the microseconds of difference between local clock
ticks and WWV ticks from the east coast. Not much variation in a
week's time, don't remember just how much (it was 48 years ago).

Yes, propagation on HF does vary but it is sometimes exaggerated.
Before R-W went into a business tailspin, the Standards Lab was
ready to get a low-frequency HP receiver for 20 KHz to improve on
establishing a local, secondary frequency standard. No joy on that
corporation which was eventually sold off. All I ever got to see was
the 'diurnal shift' of 20 KHz phase recordings at sunrise and sunset.
:-)

For what it is worth, my paper reference on TTYs is NAVSHIPS
0967-255-0010 "Principles of Telegraphy (Teletypewriter)" from
Department of the Navy Electronic Systems Command. I bought it
from the US Government Printing Office back in the early 1970s as
a reference. [I am an Army veteran, not Navy] The first chapter of
Part A in that TM has a nice historical record of 'telegraphy'
(which includes teletypewriting). It says only "60 WPM" but mentions
other Baud rates.

As far as we in Army communications of the mid-1950s were concerned,
all the teletypewriters that the Army used were called "60 WPM" and
only the teletypewriter maintenance people (and a few carrier systems
types) cared about many numbers. We did have Distortion meters used
to determine irregularities in a circuit.

BTW, the Army and the rest of the military used Teletype Corporation
Model 15s through 19s, variation being only the paper tape punch
and transmitting distributor (P-tape reader).

>Now when you get to ASCII, the old Teletype machines transmitted 8
>data bits per character and used an 11.0 unit code. This makes 100
>wpm work out to 110 baud. Electronic terminals don't need 11 unit

>numerically equal to the baud rate. 100 baud -> 10 ms/bit ->
>100 ms/char -> 10 chars/sec -> 600 chars/min -> 100 wpm.

OK on that. Teletype Corporation Model 28s (explained in intimate
detail in the NAVSHIPS TM I referenced) would easily do 100 WPM
equivalent 24/7 as long as supplied with paper, ribbon, and oil. :-)

>...word PARIS contains 50 bit times counting the space. So one word
>per second is 50 bits per second and 60 wpm. As an aside, the
>military sends a lot of encrypted 5-letter code groups, so instead
>of PARIS the Signal Corps uses CODEZ as a test word more statistically
>correct for their kind of traffic. And CODEZ contains 60 bits.

I never encountered any test word 'CODEZ' 1953 to 1956, nor
elsewhere in the Signal Corps or in DoD contracts after that. In
the mid-50s we simply used a continuous 'R-Y' generator (from
Teletype Corporation) for circuit checks with the old 60 WPM

equivalent machines. Teletype Corp. also made a 'fox test' generator consisting of a half dozen cams operating as many switches to generate "The quick brown fox jumped..." sentence (with Tx station ID at the end) for radio circuit checks.

Electromechanical teletypewriters are now rather passe' in the military and government (I use a French word to replace Obsolete which so many have trouble with). It is all electronic and, for permanent installations, over the DSN (Digital Switched Network) anywhere...including interfaces with the regular civilian telephone infrastructure. The DSN allows encryption on-line as per protocol. For field radios, the electronic data protocols are compatible with hard-wired ones and also allow encryption on-line. It was so in the first Gulf War (1990-1991) which 'battle tested' the whole military communications network DX to no-DX via TDRS (Tracking and Data Relay Satellites) and other military commsats from/to Florida to/from the Middle East.

Not having any access to the DSN or intimate details of military cryptographic equipment now, I have no exact knowledge of what is used for a test word, sentence, or whatever. For the OLD electro-mechanical teleprinters, I'd say the specifications for a specific TTY Distortion Meter would tell the exact story on timing for both polar and non-polar TTY circuits and equipment.

Each GPS sattelite has it's own on board atomic clock and the system can easily provide UTC with accuracy on the few microseconds level with an ultimate limit of +/- 340 nanoseconds using an appropriate receiver and hardware.

GPS is the basis for most of the current NTP time servers.

> there are 5 (five) letters to a word, my calculations look like this:

It has been common convention in wireline telegraphy to count "one word" as having 5 characters followed by a space. The origin of that seems to be that it was most advantageous for humans to use/remember while using the Commercial Codes, a form of encipherment both to protect information and to reduce the number of words in a telegram. Bentley's Commercial Code seems to have been the most used with 17 editions, publishing Code Books for any business or government.

As a result of those Commercial Codes, actual cryptographic codes also used 5 characters followed by a space, hence the term '5-letter groups' in referring to a "word." By the time of WWII starting, the cryptographic systems were more advanced and it was not possible to tell one 'word' from another but it was common practice to send encrypted text as 5-letter (or character) groups; the actual space in clear text was determined by the null or space substitute in poly-alphabetic rolling-key encryption codes. (reference: M-209 Code Converter used in the field in Europe by US forces)

Perhaps I should clarify. When I asked the above question, I meant specific technologies and examples of communications systems, not a restatement of the general strategies of the Amateur Radio Service that are enshrined in its Basis and Purpose. The Basis and Purpose enumerates high-level goals, but does not specify the implementation details, including the specific technologies.

I'm sure that we are all familiar with FCC Part 97.1, and restating it really wasn't the answer that I was looking for. Could you please be more specific?

 [...]

Sorry, but I've got to call baloney on this one. The individual who appeared on the Tonight Show who sent the text message was actually Ben Cook, and not an actor. Ben held the world's record for fastest text messaging:

http://en.wikipedia.org/wiki/Ben_Cook

The two Morse code operators, Chip Margelli, K7JA, and Ken Miller, K6CTW, have attested to this being an actual contest with an actual, previously unknown, message to send, which was sent both by Morse code, and by text messaging. And there's no disputing that fast Morse code would always beat an SMS text message of the same length. See:

http://www.arrl.org/news/stories/2005/05/16/3/?nc=1

Two named witnesses would appear to trump one anonymous source.

Therefore, your anonymous "reliable staffer" seems anything but.

WWV and WWVB transmitters are at the same site in Fort Collins, CO. I
was there.

> Are you familiar with the Internet-based ntp system?

Such a system requires connectivity to the internet. WWVB does not; just requires a receiver.

> Then, there is the matter of GPS, which has a time capability that is incidental to its navigation function.

GPS can only be used where the satellites can be "seen" by the receiver.

The WWV system still has its uses. I suspect its cost is trivial compared to other systems, too.

> > Would you also kindly define what is a "single axis of data," in terms familiar to those involved in communications engineering and technology?

The WWV system isn't just about time. The transmitters are also frequency standards. That's two axes of data. For those of us who use HF, they are also propagation beacons - that's three axes. There are also voice geomagnetic announcements - that's four axes.

> There is probably no purpose for which Morse can be used as a machine language where there isn't a choice of other, better suited languages available.

Yes, there is: Any application where the sender or listener may be a human rather than a machine, and where an interface like a keyboard/screen isn't practical.

> When you look at the development of the Internet, Linux and other free software, you have to wonder about the infrastructure behind it.
> How did it come about? There was no regulatory body.

Actually there was and is. "The internet" as we know it could not exist without certain legislation that made it possible, and a huge commercial investment of communications infrastructure to support it.

What we call "the internet" developed from ARPANET, which was
a DoD thing, just like GPS. Swords into plowshares and all that.

> There were no
> licenses. There were no "Elmers."

Actually, there were, just not in the same form as in radio. The
licenses were regulations; the Elmers were people who developed
easier-to-use systems.

How do you define "recently"? I got started online in 1997, and
"the internet" had only been publicly available for a few years at
that point.

> That showed great initiative. It demonstrated the sort
> of determined,
> driven advancement of technology that was once seen in
> amateur radio.

The internet was and is a commercial enterprise. Amateur radio
was never such an enterprise, by its very nature.

> But that sort of thing has passed ham radio by.
> It has been a long time
> since ham radio was a source of innovation.

When did it exist, and when did it end?

> I blame the Morse cultists
> who hijacked amateur radio for use as their personal playground.

When and how did that happen, exactly? I see a lot of claims but
no specifics or history.

> �The infrastructure that is being wasted on Morse includes band
> segments that have, until recently, been reserved for its exclusive
> use.

What band segments are those, specifically? In the USA,
there have been no Morse-code-exclusive-use band segments (except on 6
and 2 meters) for many years.

My 1962 ARRL License Manual has the FCC rules for the Amateur
Radio Service, and at that time - 46 years ago - there were no
Morse-code-exclusive-use band segments on the HF bands, or
any VHF/UHF band above 2 meters. And the rules weren't new then.

OTOH, even today, data modes are prohibited from using the
voice subbands in the USA.

Do you consider a rules change that happened more than 46 years
ago to be "recently"?

> I am very glad to see that almost all CW segments now allow data > modes
> (50-50.1 and 144-144.1 being the only exceptions).

"Now" includes at least the past 46 years.

> There is also the
> inclusion of keyer provisions in HF radios.

Which costs practically nothing.

> It will be interesting to
> see what the marketplace does to code tapes and code keys.

There are more keys on the market now than when I became a ham 40
years ago.

> I don't think they will last long.

I think they will.

> While Morse supporters often point to treaties, the fact is that the
> US was one of the last countries to abandon the Morse
> requirement for an
> HF license.

Yes - because of the slowness of the FCC to change Part 97
after the treaty changed in 2003.

> Other countries began dropping that requirement many years
> earlier, while still claiming to be in compliance with their treaty
> obligations.

Which countries? Please be specific.

> How do you explain that?

I only know for certain of one country that had a no-code-test
HF amateur radio license before 2003. There may be others,
but not many.

Japan has long had a nocodetest HF amateur license called the
4th class. But that license was and is limited to low power levels
(10 watts) and to parts of the amateur bands which are worldwide
exclusively allocated to amateurs.

Japan's claim was that the treaty exists to prevent interference between users of different radio services and between users o the same radio service in different countries.

By limiting 4th class JA hams to only worldwide amateurs-only bands, interference to other services was prevented. By limiting 4th class amateurs to very low power, and since Japan is an island nation, interference to amateurs of other countries was prevented.

Nobody challenged Japan on it, either.

But Japan still requires a Morse Code test for at least some of its higher-class amateur licenses. The USA does not.

> To me, it sounds like the FCC used
> the treaties as a pretext to keep the code requirement in order to
> placate the ARRL and the Morse zealots.

But why? In 1990, FCC created medical waivers for the 13 and 20 wpm Morse Code tests, but not 5 wpm. FCC said they would have waivered all the tests except for the treaty. Same for the reduction of all license classes to 5 wpm in 2000. Opposition to these changes did not stop FCC.

Would you have preferred that FCC violate the treaty? Or create a license class similar to Japan's 4th class?

Some additional info about US subbands-by-mode, in reply to Klystron's mention of exclusive Morse-code-only band segments.

In the following discussion, "modes" means "modes authorized for use by amateurs on the specific amateur bands in question".

The current US regulation of the HF amateur bands permits Morse Code everywhere, voice and image modes on specific subbands, and data modes wherever voice is not permitted. Morse Code has no exclusive subbands at all,
and is rarely used in the 'phone subbands. (I've been an active ham 40+ years and never used Morse Code in an HF voice subband). These regulations are descendants of those going back many decades, to times when amateur operation on HF consisted of Morse Code, voice and nothing else. (For example, HF RTTY operation by US hams was first authorized in the late 1940s, but only 45.45 baud 5 level Baudot code was allowed.)

A few years ago, ARRL proposed "Regulation By Bandwidth", which would have separated the various modes by the bandwidth of the signal rather than whether it was voice, data, image, etc. For example, under the proposal, any mode less than 500 Hz wide would be allowed in the 500 Hz and wider subbands, regardless of whether it carried voice, data, image, Morse Code or other information. There were also proposed changes to where automatic and semi-automatic data-mode stations could operate.

The proposal got an RM number and a comment period. The comments from those interested were overwhelmingly against the proposal. It was revised but to no avail; ARRL finally withdrew the proposal.

IMHO, the most common reasons for opposition that I saw reading the comments were these (in no particular order):

1) 'Phone operators did not want any data modes in the 'phone subbands.
2) "Robot" (unattended) digital stations should be confined to small subbands.
3) Concern that amateurs would have to be able to measure the actual occupied bandwidth of their transmitted signals or be subject to violation notices and complaints. Older equipment and hams who could not afford spectrum analyzers would be forced off the air seemed to be a common fear.
4) AM voice would be limited to 9 kHz bandwidth and was essentially "grandfathered", but other modes could not exceed 3.5 kHz on most bands
5) The existing rules did not need changing.

The FCC did act on an earlier "refarming" proposal by ARRL, and widened the 'phone/image subbands on some of the HF bands at the end of 2006. However, FCC went far beyond the ARRL recommendations in the amount of change. This effectively reduced the spectrum space available for data modes on those bands, since they could not be used where 'phone is allowed. The most radical change was on the 80/75 meter bands.

About the same time as the "Regulation by Bandwidth" proposal, a group of less than a dozen amateurs calling itself the "Communications Think Tank" (CTT) proposed the even more radical change of eliminating subbands-by-mode completely, and simply specifying a maximum signal bandwidth for each band.

This proposal also got an RM number and a comment period, but the comments were even more solidly against it than against "Regulation by Bandwidth". The opposition was so overwhelming that CTT also withdrew its proposal.

The point of all this is that ARRL and others have made proposals to fundamentally change Part 97 in ways that would favor the use of data modes, and the US amateur community has repeatedly and strongly opposed those proposals.

  There's only a couple of short video clips from Guinea-Bissau, much
more from Sierra Leone and Botswana (including a colorful cast of
characters) and quite a bit of Finland (shot in the early and mid-90's
```

and in 2003). The DVD's will be fleshed out with photos and audio clips.
Sample clips may well be made available.

You're right. Add South Africa to the "etc." Even if we added those
amateur populations, the RSGB Handbook wasn't widely distributed but it
was known to be a very good one. Its sister publications--and I'm
specifically including the series of "Technical Topics" books by Pat
Hawker--were also very good.

> had to pay postage, duty, etc.

I bought mine along with one of the "Technical Topics" books at RSGB HQ
in 1978 when the place was still located on Doughty street "just down
the street from Mister Dickens' house". Those books and a one year
membership in the RSGB equaled a bunch of 1978 dollars.

> Having bought "real" engineering books, I can say that both the ARRL
> and RSGB Handbooks were and are true bargains.

I'd have to agree. The current ARRL Handbooks have much more material
than the older ones. The ARRL Antenna Handbook is another bargain.

> The ARRL Handbook back then was mostly the work of W1DX,

> aided by the staff. The book evolved over time - the whole book was not rewritten every year.

Agreed. There were often just minor changes from one year to the next. I still have a number of the early 1930's Handbooks on the shelf here.

> The RSGB Handbook had many authors, and underwent serious expansion and revision between editions. Since there was not a set schedule for when the next edition would come out, the changes were much greater.

It was a similar story with the excellent "RADIO Handbook" edited by Bill Orr. It was updated only periodically and not on any particular schedule. I'm not certain how many contributed to the effort though.

> Friend of mine is trying to collect all the post-WW2 Handbooks, and has most of them. He has all the post-WW1 QSTs, in part because an OT gave him a lifetime collection, knowing he would appreciate and care for them.

I'm not bothering will all of 'em so I have selected editions from the thirties through present day. I haven't bought one since 2003. The League currently has the 2007 Handbook on sale at a bargain price so I may have to grab one of those.

W4HAV, then one of the corporate VP's at Cincinnati Milactron, gave me a run of 1934-1958 QST. That was the start of my collection. I bought the 1958-1963 and the 1920-1933 runs, a year at a time from various hamfests, typically in one-year bundles. I have only one issue from 1919 and that cost quite a bit. I ended up purchasing the QST CD's covering the early period.

> The Southgate Library keeps expanding, too. What you see in the shack picture is but a small part of it. Then there's the stuff I have in electronic format...

The expanding library is one of my worries about a move. There's mostly complete run of Popular Electronics through the early 1970's, a mostly complete run of Electronics Illustrated from the same period, a mostly complete run of 73, a mostly complete run of Ham Radio and Ham Radio Horizons and a complete run of CQ from its beginning in 1946. It took a number of years to find some of those rare 1946 issues. There's twenty-some feet in technical books here in the shack with the overflow out in the heated barn.

>
> But what about parts?

They weren't taxed at anywhere near that. That same thing extended (and may still extend) to imported automobiles. My '95 Dodge Neon cost me around $12,000. It's European equivalent, the Chrysler Neon, sold in Finland for $44,000. A Lada (Russian Fiat) cost about $20,000.

Then again, the military could afford to pay. It would be interesting if Ivor or another G-land newsgroup reader could tell us if Jackson Bros. made high quality drives for the British military.

WNOP was a 1 KW daytime only jazz station in Newport, Kentucky from the fifties until just about a decade back. Their studio, for the last twenty or so years of the station's existence, consisted of three large, connected vertical steel cylinders. The whole shebang was painted bright orange and bobbed up and down on the Kentucky side of the Ohio River across from Cincinnati. The transmitters and three-tower critical

antenna array were on top of a hill in the Delhi neighborhood of Cincy.
Until the early 80's, WNOP's transmitter was a 1948 Raytheon running a
pair of 833A's at a nice dull red glow.

The guy who owned it didn't have much money to spend on a repair.
Transformers capable of handling a KW were not found lying about. His
amp ran for many years with those copier transformers and, from the
outside, his amp didn't look any different from any other Heath Warrior.

That's a lot of bottles and 1625's were really cheap as surplus in those
days. It wasn't a very practical design, but it worked.

> depending on where you get your bottles a pair of 572Bs may be the

> better deal.

Well, not just "may be" but, IMO would be the better deal. An 811A is
good for 65 watss plate dissipation for 260 total watts of dissipation
for four. Four of the 572's are capable of dissipating 640 watts for
just a little more money.

> The solid-state option has been around for decades, but the high cost
> stops a lot of hams.

The MFJ AL-600 costs roughly what the company's AL-572 runs. The AL-572
will run 1000 watts CW output. The solid state AL-600 runs 500w CW.

> In April 1976, a legal-limit solid-state all-band HF linear amp was

>
> Those ceramic-metal tubes were never inexpensive in the first
> place.

Well, the 8874's weren't terribly expensive when introduced. In fact,
neither were tubes like the 3CX800, but they price increases have been
out of line with other tubes. Ten-Tecs latest high power amp, the Titan
III, uses a pair of the Russian 4CX800 tetrodes. Those are quite
reasonably priced compared to the 3CX800 triodes.

> Unlike almost all commercial/military applications, in ham radio,
> when an expensive final tube fails, it's up to the owner/operator
> to pay for the replacement.

Right. Destroying one or more high power vacuum tubes while in the
employ of a company or government with deep pockets isn't the same as
doing so when you are the guy responsible such expenses.

>> Well, there's likely a move in my future and something's going to > have t
> o go.
>
> (sigh)

I'm fifty-nine and it is likely time to decide which material things I hold dear enough to hang onto for the long run. It is probably about time to simplify my life. I can make some folks smile by giving them some things. I can sell some of the items and generate a little income instead of paying someone to haul them to a new location.

My grandparents always sat at home and we did the traveling even when we lived in Florida in the pre-Interstate Highway days.

> Still, all that means is you draw distance circles around where the
> kids are. Doesn't mean you have to live down the street.

If the kids have jobs which cause them to relocate every few years, it might be better to choose a place you like. We're a much more mobile society than ever. There are exceptions. My neighbor was born in his parents house across the road. That's all the farther he ever got from home. Now his son has the old family farm and a younger son has built a home 1/4 mile down the road. This approaching coal mine means a windfall for me. It is a family tragedy for the neighbor and his family.

>>> And most of all finances. With people living longer, having kids > > lat

People flock to states with no income tax or with no tax on pensions or
government pensions. A lot of those states are in the warm, sunny
southland.

> OTOH things like health care costs, rising energy prices, etc.,

>
> bwaahaahaa

It's gospel. My mentor lived along the New River at Hinton, West
Virginia. Hinton sits at 1200-some feet above sea level, but is
surrounded by 3000 foot or better mountains. He never installed a beam
antenna. There'd have been little point. Most of his DX was worked on
40m, where the wave angle of arriving radio signals was often higher
than on upper bands.

> But a good example of the problem, and the need to get the
> RE attorney and realtor to understand *exactly* what you
> will accept.

Look at the property. Ask questions. Get confirmation in writing.
Take along a portable receiver. No place is a good amateur radio
location if there's some noise source blotting out big pieces of the
radio spectrum.

> You have the most important resource, too: Flexibility. You don't have
> to move this month, or this summer, or land in a specific school
> district or some such.

That's right, but I'm not looking forward to dismantling antennas and towers and putting something similar up in a new location. I shudder when I think about holes to be dug, concrete to be poured, etc.

>> I'm thankful that my XYL and I agree that neither of us wants to be

>> gardening.
>> I like multiple towers.
>
> Works for me!

Best is that she doesn't object to the aluminum and copper overcast. I have friends whose spouses have apparent veto power over towers and antennas.

>> � I'm thinking 3 or 5 or 8 acres. *grin*
>>
> Think big, think flexible. Could you subdivide some acres for other
> homes? Lease for farming?

One of my friends rented some of his land to a local farmer. After a few years, it became more trouble than it was worth. I don't want to spend large chunks of my life just mowing grass. Some land can be allowed to grow up, leaving cleared areas for towers. Some can be planted in widely spaced clumps of trees. I think my pal intends for some of that land to be used for beverage antennas for 160 and 80m. He has a farm tractor and will just brush hog the land a couple of times yearly.

One local fellow (retired from the Postal Service) bought up better than 1,000 acres of hilly land out the ridge from me. He became a millionaire after his retirement in just one short day. How? He sold a million dollars worth of timber to the Amish.

> One thing that was/is popular in WNY is to have a woodlot. Usually a

See above.

> Of course you have to love to cut, split and stack wood, but a lot of
> us do.

...and a lot of us don't. I'll happily pay someone to cut, split and stack wood. I did some of it when I was younger.

> "Wood warms you twice - once when you cut it, again when you burn it"

I don't think many folks have suffered a fatal heart attack while
burning it, heh.

Hello Cecil!

You are correct, sir! Thanks!

While it could be argued that the five channels known as "60 meters" are not be an "HF amateur band" in the sense that, say, 20 meters is, they are HF and only upper-sideband voice is permitted to US amateurs there.

So amend the above to read:

"The current US regulation of the HF/MF amateur bands permits Morse Code on all frequencies except the five USB-voice-only channels known as '60 meters', ..."

Radios are built with features that people expect, and most hams do indeed expect a keyer these days. to not have one would indeed cost sales.

Even among those who do not use the keyers to send Morse, the keyer function can be used to reduce the duty cycle when tuning an amplifier, which will stress the tubes less in the event of a bad initial setting.

My understanding is that ntpd can handle that problem quite well. An OPTIMAL setup would involve 1 computer per radio, each acting as a radio controller (also called a strata 0 server). You could have a radio for WWVB or WWVH, a second radio that is set to scan the WWV frequencies and a third "radio" for GPS. Those 3 computers would connect to a fourth computer that would act as a strata 1 server. The result would be a time server that is as accurate as if it were connected to other ntp servers via the Internet. Such an arrangement is sometimes used by firms that need metrology-grade time service on a secured, internal LAN.

By the way, do not be put off by the expense of the four (or more) computers described above. According the ntp documentation that I have read, they need to have at least 100 MHz processor speeds for optimum accuracy, but there is no benefit in going much above 100 MHz. Thus, a pile of old, junkyard computers will do the job quite well and at an aggregate cost of $20 to $100 in total.

See my response to Phil Kane. A computer running ntpd can get metrology-grade time service from radio signals. ntpd can use radio only, Internet only or both.

> > Then, there is the matter of GPS, which has a time capability

In or near the continental US, that is not an issue.

No, it's an incidental benefit. It does not require the transmission of additional information.

I take it that you don't know what "machine language" is. Humans are not supposed to be involved. If they are, it's not machine to machine communications.

Utter hogwash. It started out as a network of Universities and a few defense contractors' laboratories. Much of the funding came from the individual Universities. The contribution of the government (via the defense contractors) was not absolutely necessary. Besides, after the Tappan worm incident, the networks were split into ARPAnet and DARPAnet (with a "D," as in defense). The public Internet is descended from the small slice of that pie.

The Internet opened to the general public in 1993 and 1994. At that time, there were essentially no courses at accredited Universities that covered UNIX, TCP/IP, the Internet or related topics. You had to learn it on your own. The Universities mainly taught MVS and 360/370 architecture.

> > That showed great initiative. It demonstrated the sort of

The Internet was not commercial in origin. When I first gained access, I had to sign an agreement not to use it for commercial purposes. Sending out for pizza via e-mail would have been a violation and would have resulted in account cancellation. But than, that was long ago. Spam hadn't been invented yet.

[...]

The CW bands were those band segments that excluded voice. Until fairly recently, there was no such thing as "data." There was some RTTY, but it was never a major issue. For many decades, the traffic in the HF ham bands was SSB voice or CW. A pie chart would show a very small slice labeled "other."

[...]

What about code tapes? How much longer will they last? My guess is that those keys are sold only to replace other keys. I doubt that there are very many first time key buyers today.

I'm not going to spend a lot of time doing your research for you, but there was more then one treaty and those treaties expired or were modified over a period of years. No-code HF licenses came about over time in a number of countries. The US was either one of the last to drop code or was dead last to do so.

If you say so, then it is so. All I've got are some acquaintences IN the entertainment industry who work behind the camera...plus five professional actors (who don't count in this particular discussion). That 'recent demonstration' was over a year ago, was it not?

"The Tonight Show with Jay Leno" is an entertainment vehicle. It is not a documentary source of absolute facts. All such 'talk' shows are convenience outlets for Public Relations in this capital of motion picture and television production of the USA. MOST of the movie and TV production in this city lives or dies by PR.

If I had become persuasive in my inquiry I MIGHT have gotten at least a Call Sheet for the 'Leno show' in question. Usually those are (by common agreement) Non-Disclosure documents. I could have then digitized that Call Sheet and sent it privately as 'evidence.' I did not think that such was necessary in this case.

>The two Morse code operators, Chip Margelli, K7JA, and Ken Miller,
>K6CTW, have attested to this being an actual contest with an actual,
>previously unknown, message to send, which was sent both by Morse code,
>and by text messaging. And there's no disputing that fast Morse code
>would always beat an SMS text message of the same length.

I have corresponded with Mr. Margelli in his new position as Director of Marketing for Heil Sound...about Heil products, not about this alleged 'test' or 'contest' on the 'Leno show.' I have NO complaints about Mr. Margelli's nor Mr. Miller's capabilities with manual morse code communications. I only have complaints about this entertainment gig being used as 'factual demonstration' of any comparison of manual morse code versus any other mode.

I haven't used a Teletype Model 28 machine in many years...but I could challenge ANY manual morse code operator pair to send either clear text or enciphered (5-character groups) textual data as to which method is 'faster' (TTY v. manual morse). I would not need a recipient on-stage since another TTY terminal would repeat all input sent by the transmitting terminal. The only problem there is that it ALSO is a 'set-up' kind of 'test' (any touch-typist on a TTY would 'win') and has very little entertainment value. The latter item would cause its non-appearance on 'the Leno show.'
I am a touch typist who learned that in middle school on manual typewriters with no legends on key tops. I am age 75 and still retain the ability to continuously 'send' keyboard input at about 50 WPM with burst-input rates approximately 100 WPM.

>Two named witnesses would appear to trump one anonymous source.
>
>Therefore, your anonymous "reliable staffer" seems anything but.

I cannot argue your statements or 'baloney' comments in this venue. My original source is now working for another show. No more access to Tonight show records is possible. If you or any other morse code mode champion say it was a 'real test,' then it must be a real test.

As to the efficacy claim that manual morse code communications beats cellular telephone textual-only (by keypad) communications, I do not know of a single communications service or provider that uses 'text' (via cellphone) for two-way communications. Of what point was this entertainment venue 'test' actually proving?

>In 1960, while working in the Standards Lab of Ramo-Wooldridge Corp.
>in Canoga Park, CA,

Errrr, Len, the Ramo-Wooldridge Corporation went out of existence in 1958 when it merged with Thompson Products to become Thompson Ramo Wooldridge, Inc.   Remember that I started with the "original" R-W in 1957 and was employed by them at the time of the merger at the former El Segundo Boulevard facilities (I never did get to work at the Arbor Vitae Street facilities which were the headquarters of the Air Force

Ballistic Missile Division). They didn't move to Canoga Park until the late fall of 1959, and I was laid off (for the second time) in June of 1960. Thompson Ramo Wooldridge, Inc - later TRW, Inc. - went on an acquisitions binge and itself went out of existence in 2002 when the electronics and aerospace parts were acquired by Grumman (now Northrop Grumman) and the automotive parts mostly by Goodyear.

In context - RW was always friendly to ham radio, and the pre-merger RW Corp. actually let us scrounge both new and recycled parts for ham rigs and audio projects which became our property as long as we signed a register/release stating what we were building.

>I got to pull some OT on Saturdays to measure
>the difference between east coast transmissions of WWV and the
>local General Radio frequency standard. Just a plain old quartz
>crystal standard oscillator driving divider chains to the built-in
>clock.

While at the El Segundo Blvd. facility we had a project of measuring distance to a transmitter using the time delay of HF transmissions received at different sites with a calibrated link between them (azimuth was easy using standard DF techniques) and we used the GR frequency standard referenced above. Using WWV was too error-prone.

>I would record the microseconds of difference between local clock
>ticks and WWV ticks from the east coast. Not much variation in a
>week's time, don't remember just how much (it was 48 years ago).

My references about time differences, BTW, was to the time of day, i.e the time of the tick, not the interval between the ticks. GPS has a very noticeable offset compared to NIST.

I guess that it's only nuts like me that care about that. My early training as a broadcast studio engineer while I was in engineering school required timing of program starts and endings to the second. "Dead air" was not permitted. Three o'clock did not mean three o'clock plus 1 second - the Western Union clock reset pulse on the hour was broadcast as a "beep".

>From my other hobby, "railroad accuracy" of watches (which are
compared with a master clock at the start of a shift) requires one second per day, 30 seconds per month. Easy to do with quartz watches nowadays. There even used to be a SP Railroad dial-up number (now long gone) where the "time man" would announce the time "Southern Pacific Standard Time is ...." as contrasted to Ma Bell's "time lady" who would announce "Pacific Standard Time is ..."

Something must have changed (or been fixed) then - we made
measurements about three years ago and there was about six seconds
offset - an eternity for accurate time measurements.  340 nanoseconds
we can tolerate.  Six seconds we can't.

Four such computers in a single box would be ideal for the way I run
my ham data-modes (packet/PACTOR/APRS/BPSK31 setup - 24/7 each).  Too
bad we can't get that in a box the size of a toaster at a price that
is less than $100.

My secretary at March AFB (early 1960s) could and did type faster than
the Model 28 could cut tape. It frustrated her no end.

Yes, there were "licenses" to users but it was a one-way deal. My
former FCC Bureau Chief went to the Reagan White House as the
Assistant Chief of Staff for Administrative Services, which included
overseeing the White House Communications Agency (staffed by the
military, not the Secret Service which has its own comm net). He was
given an ARPANET connection at home and WHCA mobile phone in his car.
When Reagan left office and George Bush I put his own Chief of Staff -
John Sununu - in place, my guy was replaced because of a personality
conflict and his ARPANET connection and mobile phone were physically
removed from his house and car with less than two hours notice.

Could "selective availability" have anything to do with that?

Just about any piece of cheap junk from the last decade could handle
all three sources at once, though it would be pointless since the
ntp software would always choose the GPS source (unless it became
unavailable for some reason).

The 'box the size of a toaster' part is out, but could you settle for 4 old blade servers, 1U size each, in a rack mount? If so, find a surplus property auction in your area (large state university, government agency, etc.) and you will probably be able to pick up something along those lines.

As does a GPS based time sytem.

Both WWVB and GPS require decoding of the time information by something.

GPS provides a better frequency standard that WWV.

It does not provide voice announcements or serve as a HF beacon though.

It's changed. GPS and UTC now differ by 14 seconds, according to
http://tycho.usno.navy.mil/gpstt.html. This is because GPS time does
not include leap seconds.

This 14 second difference is part of the GPS broadcast, so can easily
be backed out of the GPS time data to produce UTC. Once corrected,
the UTC values have the stated accuracy.

Don't be confused by the latency of some GPS units in producing time/fix
products. I've seen them produce fixes several seconds later. That's why
the time is included in postition data, so you know when you were there.
If you want time from your GPS, you need either the 1PPS pulse output or
a unit with a known and predictable period from real time to character
output. For many uses, simply assuming that the first character of the
output string (NMEA) occurs at the time in the message is adequate,
but that's not going to get you your 340ns accuracy.

For example, I am using a Trimble Acutime to feed an home-brew time
demon. Tests comparing system time from this demon to ntp stratum 1
servers gave a few millisecond difference. Good enough for me.

The only thing that has changed since the first sattelite launched is that the accuracy degrading dither for civilian use was removed about 7 years ago. With the dither the time accuracy was in the range of tens of microseconds.

Whereever you were getting your six seconds of error from, it wasn't from the GPS system.

My cohort at the old U.S. Embassy in Guinea-Bissau and I could jam one up as well. Nothing like poking tape on numerous multi-page outgoing cables five or six days per week to build typing speed and technique. The 28's were set up so that we never saw what we typed appear on paper. If you really wanted to check your work, you'd have to gather up the perf tape and look at it. Those machines were replaced just after I left Bissau in late 1987. I took the very last State Department 28 in Africa out of service in Sierra Leone in 1990. We had to destroy the innards, but a colleague wanted the cabinet. He re-worked the thing and turned it into a bar in his living room. His wife arrived at post a couple of months later and the new bar was quickly relegated to the fellow's ham shack.

During my early time at State, most places were using Teletype Model 40 equipment with the three 8" disk drives and the fastest, most rugged impact printer I'd ever seen. That stuff was gradually replaced by computer equipment in the 1987 to 1992 time frame.

I ran a Model 15 in Cincy and also had a Model 33 for a while. I wanted a 28 with the 3-speed gear shift badly. W8JIN offered me one long after I'd begun using a Commodore C-64. I gave it about thirty seconds thought before rejecting it as too big and heavy.

Len's point about touch typists winning a speed contest with Morse ops would depend entirely upon how fast the typist was. The second junior op I had in Bissau would have been lucky to do 30 wpm on a keyboard.

With the teletype model 40 stuff, there was not any typing of cables at all. Secretaries typed the cable and they were fed into an OCR. The operator might have to correct a formatting error or the occasional misread character. With the advent of the classified LAN's and the computerized equipment, drafters would electronically release cable text and addressees to the communications center and the ops would send the messages. Incoming traffic was routed in the same way, mostly automatically. Anything not understood by the computer would route to a 'spill que' to be manually assigned action and info offices. Occasionally the Deputy Chief of Mission would telephone or e-mail a request that the action office for a given cable be changed.

By then, part of our work involved keeping message router databases (the military addressees--especially Navy--could change frequently) up to date. The computerization was supposed to result in the paperless office. It didn't. The stuff was just printed somewhere other than in the comm center.

That is more complex and costly than a <$50 wristwatch or wall clock,
however. And it takes a lot more attention than simply keeping
batteries in it.

Why does it matter? Morse Code can be machine-to-machine,
machine-to-human, human-to-machine, or human-to-human.

That's a big plus.

DoD funded, then. Maybe not directly, but still DoD funded.

It wasn't a bunch of self-funded basement experimenters.

Why? Was there no legislation needed to make the internet
as we know it possible? Was there no one working to make it
easier to use?

994.

14-15 years ago.

So I got online 3 to 4 years after the beginning.

And how long did that no-commercial-use restriction last? It was long gone in 1997.

> � �The CW bands were those band segments that excluded voice.

But they have included data modes like RTTY for more than 46 years. Every Hz of them.

You claimed:

"infrastructure that is being wasted on Morse includes" band segments that have, until recently, been reserved for its exclusive use."

Note the terms "is being wasted" and "until recently". But no such band segments (except 2.5% of 6 and 2 meters) have existed for at least 46 years.

Not only that, but modes besides FSK RTTY have been common on the HF amateur bands since at least the early 1980s.

> Until fairly recently, there was no such thing as "data."

Please define "fairly recently". 10 years? 20 years? 46 years?

All of the non-voice parts of the bands have been open to data modes for decades. That hams didn't use them much 30-40 years ago wasn't because of Morse Code.

> There was some RTTY,
> but it was never a major issue.

When?

> For many decades, the traffic in the HF
> ham bands was SSB voice or CW.

Hams began using SSB voice in the early 1930s. It became more popular in the late 1940s and really took off in the late 1950s-early 1960s.

But there was also AM voice, narrowband FM voice, RTTY, SSTV, and even some FAX.

> A pie chart would show a very small slice
> labeled "other."

Perhaps, 30-40 years ago. Think about why that was.
It wasn't because of Morse Code.

> > > It will be interesting to
> > > see what the marketplace does to code tapes and code keys.

> > There are more keys on the market now than when I
> > became a ham 40 years ago.

> What about code tapes? How much longer will they last?

They've been largely replaced by Morse Code training
software, like G4FON's. No need to buy tapes anymore,
just download some free software and make your own. Or
download files to your MP3 player or iPod.

> My guess is
> that those keys are sold only to replace other keys.

My observation is that a considerable number are sold
to new hams who want to *use* Morse Code on the air.

Is that wrong? Should hams not learn, use or promote
Morse Code anymore?

> I doubt that there
> are very many first time key buyers today.

I know a couple. And since the usable life of a key is
measured in decades, the need for replacements is
pretty limited.

And consider this:

There are a considerable number of companies making
CW-only or CW-centric low-power HF amateur transceivers.
They are being sold in the tens of thousands.

For example, a new company called Elecraft appeared
in 1999 selling a CW-only QRP HF transceiver *kit* for
a bit under $600. To date, more then 6000 have been sold,
with minimal advertising. The company later produced
other CW-only transceiver kits, and they have sold well
with minimal advertising.

treaty
> obligations in different ways?

I know that Japan used that logic to get around the ITU-R treaty
requirement.

Do you know of *any* other country (besides Japan)
that had a nocodetest amateur radio license with HF privileges before
2003?

> > Would you have preferred that FCC violate the treaty?
> > Or create a
> > license class similar to Japan's 4th class?
>
>�I'm not going to spend a lot of time doing your research
> for you, but
> there was more then one treaty and those treaties expired or were
> modified over a period of years.

I have researched the subject. The treaty in question is
the ITU-R treaty, to which the USA is a signatory. That's
not just my opinion; it's what the FCC has repeatedly
written in its Report and Orders.

Before July 2003, in part S25.5, the ITU-R treaty required
that all amateur licenses which grant privileges below 30 MHz
had to have Morse Code tests.

That requirement was made optional at WRC 2003. Signatory
countries could retain Morse Code testing or eliminate it, as they
chose.

Some have chosen to reduce or eliminate it. Others have not.

> No-code HF licenses came about over
> time in a number of countries.

How many countries besides Japan had them before July 2003?

How many have them now?

> The US was either one of the last to drop
> code or was dead last to do so.

Japan still requires Morse Code for First Class licenses. Canadians have the option of passing a Morse Code test or getting a higher score on the written exam. Most of the countries in the former Soviet Union still require Morse Code testing.

In any event, here in the USA:

- there has been a nocodetest amateur radio license for more than 17 years

- all classes of amateur license have been available for just a 5 wpm test for 18 years with medical waiver, and for almost 8 years without such a waiver.

- Morse Code testing has been completely gone for more than a year.

Yet US amateurs continue to use the mode extensively. Some use it exclusively.

I've dealt with the WHCA folks on several occasions. The last was during the '97 Clinton-Yeltsin Helsinki Summit. It is plain why WHCA is staffed with military people: They don't get overtime. :-) Those I worked with were very dedicated and hardworking. The flurry of activity preceding a Presidential visit--for things like frequency clearances from the host government, the size of the PBX and number of lines for the visit hotel(s) and the number of cellular phones, is phenomenal. That Helsinki Summit was a double whammy in that it also involved a SECSTATE visit which meant that State's commo team was also on the ground with an entirely different set of communications requirements.

It was turned off about 7 years ago and even then just put the ultimate
accuracy in the low microsecond range.

GPS has never been off by six seconds.

It is a big issue in my comm room which is partially underground with concrete walls (what they call a "daylight basement" here) where neither WWVB nor GPS signals penetrate. I have not yet found an "atomic clock" (either digital or analog) that has an external antenna collection - they may exist but not at the consumer level. The consumer-grade clocks that I have sync well on the "upper" story but do not hold their accuracy for long.

And to add insult to injury, the analog wall clock that I use by intent has a face with the marine "silent period" and "auto alarm" markings, a configuration well known to shipboard radio operators. For a $20 quartz clock it keeps time remarkably well, considering that I have to manually adjust it at "DST" time changes anyhow.

Within the last two years I bought a set of keyer paddles to complement the 60-year-old J-38 key that I refurbished. And I'm not a "Valiant Morseman" (tm - Len Anderson) by any means.

"Out here" many of the teenagers who become new hams through one means or another take the CW classes that our radio club gives if for no other reason than it's a "thing" that many of their contemporaries who use cellphones for calls and texting can't do. One-upsmanship still lives.

He gave an example of Morse being used to encode transponder identification, thus proving the continuing need for Morse. I countered that transponder ID's are read by machines (the computers that drive video displays), not by humans and, therefore, any machine language would do. In fact, a REAL machine language would probably be better suited to the task.

Please, let's not lose the context.

according to whom?

indeed I would say most of Ham use is Machine to human interestion
wether by watching my R/C aircraft fly (as well as to to send my
comands to it) as though I was on board or my interaction with the
fairly lifely packet system that survives in this where I interact
with with people but very often not in real time at all

or looking at what recent didx aprs staion I can see as a guide t

where I might be able to send a signal
frankly phil you seem to over looking a lot of ham radio

If you read the whole thing, you find there are several differences
betweeen the raw time and UTC.

> This 14 second difference is part of the GPS broadcast, so can easily
> be backed out of the GPS time data to produce UTC. Once corrected,
> the UTC values have the stated accuracy.

All the offsets from UTC and their values are in the NAV message. Most
receivers do that adjustment automaticaly as UTC is what most end users
want.

Now, if you have some receiver that outputs the raw uncorrected stuff
or a home brew receiver without the corrections...

That would be a case of RTFM.

Most cheap receivers are either optimized for position or time, not
both, so it pays to read the spec sheet carefully.

> For example, I am using a Trimble Acutime to feed an home-brew time
> demon. Tests comparing system time from this demon to ntp stratum 1

That's one that has been optimized for time, so a good choice for your
application. A bit of attention to details could get you into the
microsecond range, but for the majority of people not necessary.

Steve,

I'll let you in on a secret: I think manufacturers put keyers in their
rigs because every ham who has forgotten the code wants to think that
he'll hook up an iambic key someday and win the CW SS.

Like the lottery, they're selling a dream: if the chip were omitted
without telling anyone, I doubt 99% of hams would notice. ;-)

73,

Bill W1AC

No rack mount space available, but it sounds good. My (step)son is the IT guy at a well-known audio test equipment manufacturer and has those sort of contacts.

I missed that; what kind of transponders?

Certainly not aircraft transponders as they have no morse id.

Irrelevant to the issue.

In any case, there have been several articles in the HAM press on moding
surplus telco GPS time/frequency standands for HAM use.

The usual output is 10 MHz with a lot better performance than anything
a crystal can provide.

I'm afraid that the majority of today's hams simply don't care. But if you mentioned any one aspect of ham radio -- DX, contesting, public service -- you could say the same thing. The _majority_ of hams don't care.

I wonder if there is any one aspect of the hobby that the majority do care about. What's the single most popular activity in ham radio? Based on our local group, I'd have to say "drinking coffee with the gang."

> Like the lottery, they're selling a dream: if the chip were omitted
> without telling anyone, I doubt 99% of hams would notice. ;-)

You mean put the jack on the back for the key, but don't connect it to anything? Yeah, I think you're probably right. Problem is, someone from that 1% would hook up a paddle, find that it didn't work, and inform the 99%. Then there would be an excuse to rant, and people who don't even own a paddle would be vociferously roasting the manufacturer.

:-) <-- Apply this smiley as necessary above if you take these comments
too seriously.

Instead of a chip, wouldn't it make more sense
just to use a small subroutine in the CPU?

That's what most radios do these days. Some with
less-than-perfect priorities: The internal keyer
of one particular YAECOMWOD flagship transceiver
I recently had the pleasure to operate generated
broken CW if the processor had other tasks, like
starting the internal fan, to do...

About the topic in general: The cost of adding a
keyer is negligible, and no serious manufacturer
will even consider to omit it from their radios.

It *is* a selling point, no matter if people use
it or not...

It is a interesting question, Steve. I suspect not. There are so many different aspects and unfortunately some of them are at odds. If I had to perform only one aspect of the hobby it would be homebrewing. But my favorite activities are Homebrewing, PSK31, and contesting in that order. Most everyone else would answer differently.

But to coin a phrase "Its all good!"

What's the single most popular activity in ham radio? Based
> on our local group, I'd have to say "drinking coffee with the gang."

Hehe, we've nicknamed our local repeater the "Food Repeater". It is pretty busy, but we do spend a lot of time talking about where to get together for breakfast, lunch, dinner, dessert, coffee, snacks..... well you get the idea.

>> Like the lottery, they're selling a dream: if the chip were omitted

Minor quibble... Do you really think it is that high a number? Keeping in mind that that roughly half of all hams are Technicians that probably wouldn't be expected to know. But of General and above, I would think that most would notice.

At any rate, it isn't that expensive or space hogging an addition, and it has uses beyond transmitting CW Morse - tuning and Morse practice.

The rigs are meant to be versatile, I mean I have USB capability on 40 meters and below, and LSB above that. There are other things that are likely used much less than a keyer.

On a related subject, There was a new Ham trying to sell a Icom IC-7000 (I Want, I Want!)on QRZ Because he said it didn't perform well and he was tired of it. Several other Hams tried to get him to say exactly what wasn't working with it, and it ended up that he just didn't understand how to work an HF radio. The thing with HF rigs is that they are definitely NOT plug and play. That's what I love about them, but new guys and gals coming from the HT world of repeaters need a lot of Elmering. And we should be doing it.

While I'm not an editor or proofreader by profession, I do have some
experience in those fields and would be glad to proofread/comment
on your memoir if that would be of any help. Just for the fun of it.

Always have been, really. The ARRL Handbook now covers a lot of
material,
yet does not require an extensive engineering background to understand
and
use.
>

That it is listed as "edited by Bill Orr" says the author list was
extensive.

If the transmitter final stage efficiency was 65%, those tubes were
dissipating
about 250 watts each. Given that the 833A's maximum rated plate
dissipation
is 400 watts and that at that level the anode color is warm orange-
red, the
"dull red glow" was completely normal.

> just a little more money.

A pair of 572Bs is good for 320 watts plate dissipation, which is
about the same
as three 811As. In Class B GG they will do a kilowatt on CW and 1200
watts on SSB
(input, not output).

>

Which was (ahem) a few years ago, when life was somewhat different.
For example,
did both parents have full-time jobs?

> > Still, all that means is you draw distance circles around where the
> > kids are. Doesn't mean you have to live down the street.

> If the kids have jobs which cause them to relocate every few years, it
> might be better to choose a place you like.

Of course. What I'm saying is that Grampa and Gramma can often find
a place they like which is within a reasonable distance from where the
kids are.

> � We're a much more mobile
> society than ever. � There are exceptions. � My neighbor was born

in his

> parents house across the road. � That's all the farther he ever got from home. � Now his son has the old family farm and a younger son has built a home 1/4 mile down the road. � This approaching coal mine means a windfall for me. � It is a family tragedy for the neighbor and his family.

Both extremes have their price. Highly mobile societies do not form stable communities, immobile ones fall victim to changes such as you are seeing.

> If you have a pile of money, any time is a good time. � A lot of folks
>
> don't have a pile of money or their investments have taken a beating or their home has lost value or they are unable to sell it.

Agreed. But even in good times it can be a challenge. For example, even if the house can be sold fast for a good price, if the retire-to place is also expensive there's no savings.

> People flock to states with no income tax or with no tax on pensions or government pensions. � A lot of those states are in the warm, sunny southland.

Yep. But over time those tax situations may change. As the population age mix changes, those states see increasing burdens on Medicare and other services and less revenue because of all the exclusions. Sooner or later, something has to give.

> > OTOH things like health care costs, rising energy prices, etc.,
> > work the other way.
>
> Exactly.

Look at the water shortage problem in Georgia. It really boils down to having too many people in the wrong place.

> Look at the property. � Ask questions. � Get confirmation in writing.
> Take along a portable receiver. � No place is a good amateur radio location if there's some noise source blotting out big pieces of the radio spectrum.

Agreed all around.

The big problem many folks face is lack of time. If a move is 100% voluntary, doing the research is easy, but when it's because of a job relocation or such, there may not be time to wait for the perfect place to come on the market.

When the local RE market was really hot, a couple of years ago, it
was not uncommon for a house to go on the market at noon and for
there to be multiple offers above the asking price before the sun went
down. Buyers had pre-approved mortgage papers in their back pockets
with the checkbook. Research CC&Rs? Line up a professional home
inspector? Make an offer with conditions? Forget about it, that house
is SOLD - to somebody else.

Great folks, but often misunderstood by outsiders. We could do well to
emulate some of their values IMHO. Lancaster County is not
far west of here.

> > One thing that was/is popular in WNY is to have a woodlot. Usually a

>
One way to prevent those heart attacks is to stay in shape with
exercise - like
splitting wood...

Back at the house on RadioTelegraph Hill, about 1982, there was a
maple about
80 feet high which had few leaves one spring, so I called an arborist.
Who said
"You better take that tree down before it falls down in a storm, it's
sick and won't get well."

So I had the tree taken down and the wood cut into fireplace lengths.
But that's when
I learned that "cut" and "split" meant different things: the wood was
in fireplace lengths
but some parts were several feet in diameter. So I bought an axe and a
couple of wedges
and learned to split wood by hand. I got pretty good, too.

It all went to the fireplace in that house.

> >>(described) "text messaging experts"

No, it wasn't. They were not actors.

In the clip, the sending text messager is described by Jay Leno as "the country's fastest text messager" and his name is given as "Ben Cook". He says his record is sending a 160 character message in 57 seconds. Those facts can be verified by watching the clip.

160 characters in 57 seconds at 5 characters per word works out to approximately 33.68 wpm.

160 characters in 57 seconds at 6 characters per word (allowing for spaces between words) works out to approximately 28.07 wpm.

The current Guinness Book of World Records for a 160 character message is 41 seconds. That works out to about 46.83 and 39.02 wpm for 5 and 6 characters-per-word, respectively.

All are well below the world-record Morse Code speed, or the speed of skilled Morse Code operators.

The 160 character message used in the text-message speed-record attempts is a standard message previously disclosed, so that all attempts use the same message. The Leno test used a message unknown to any of the participants.

>
> If you say so, then it is so.

No, it has been verified by several independent sources, including
people who
were actually there and part of the test.

> That 'recent demonstration' was over a year ago, was it not?

Yes - what difference does that make? The video clip can be
reviewed for confirmation.

> "The Tonight Show with Jay Leno" is an entertainment vehicle. It is
> not a documentary source of absolute facts.

Yet the facts are clear: Neither the text message sender nor the Morse
Code operators were actors, according to named people who were
actually there.

> >The two Morse code operators, Chip Margelli, K7JA, and Ken Miller,
> >K6CTW, have attested to this being an actual contest with an actual,

>
> I have corresponded with Mr. Margelli in his new position as
> Director of Marketing for Heil Sound...about Heil products, not
> about this alleged 'test' or 'contest' on the 'Leno show.'

Yet you use the word "alleged" and imply he is wrong when he says
the text-messager was not an actor.

> I have
> NO complaints about Mr. Margelli's nor Mr. Miller's capabilities
> with manual morse code communications.

OK so far.

>I only have complaints
> about this entertainment gig being used as 'factual demonstration'
> of any comparison of manual morse code versus any other mode.

Why? What are the complaints? What was not factual about the demonstration?

Do you think that text messaging is faster than Morse Code done by skilled operators?

The text-messaging sender has been identified as a record-holder named Ben Cook. The record text-messge speed is below that of skilled Morse Code operators, and the text-messager simply lost the speed race. Not just on the show, but in rehearsals.

The two Morse Code operators, K7JA and K6CTW, have publicly and privately said it was a real test. Are they not telling the truth? Why should anyone believe your account of an unnamed ex-staffperson, and not believe two identified people who were actual participants?

> >Two named witnesses would appear to trump one anonymous source.
>
> >Therefore, your anonymous "reliable staffer" seems anything but.
>
> I cannot argue your statements or 'baloney' comments in this
> venue.

Why not?

What's wrong with "this venue"?

> My original source is now working for another show.
> No more access to Tonight show records is possible. If you or
> any other morse code mode champion say it was a 'real test,'
> then it must be a real test.

What was wrong with the test? Given the evidence, why would any reasonable person say it was not a real test?

> As to the efficacy claim that manual morse code communications
> beats cellular telephone textual-only (by keypad) communications,
> I do not know of a single communications service or provider
> that uses 'text' (via cellphone) for two-way communications.

Mine does.

When I receive a text message, the cellphone display shows "reply" in the lower left corner. All I have to do is push the right button, type in my message, and push "send". The recipient can text me back, too.

That's two-way communications. I've had long conversations via text messaging that way. It's slow but it works. Effective in noisy environments or when having a voice call is otherwise not the best choice.

Text messaging is a useful communications tool. So is Morse Code.
I use both.

> Of what point was this entertainment venue 'test' actually proving?

It showed that old methods aren't necessarily slower or less useful than newer ones.

In the first part of the clip, Jay Leno selects a young lady from the audience, talks to her a bit, and asks if she thinks Morse Code or text messaging is faster. The young lady says text messaging is faster. The audience agrees.

Jay Leno then brings out the "country's fastest text messager" (not an actor) and the two Morse Code operators, introduces them, and explains the test.
The audience and the young lady are confident that the new technology of text messaging will be faster than the old Morse Code.

Yet when the test is actually run, Morse Code proves to be faster, and produces a hard-copy printout for verification. The world-record-holder could not beat a couple of amateurs going at a fraction of the Morse Code record speed.

Not only is the bit entertaining, it proves the point of newer not always being faster.

What serious CW operator cannot send Morse faster than he/she
can text-message? I don't know of anyone including me. But
give me a full sized keyboard and the situation changes.

> Not only is the bit entertaining, it proves the point of newer not
> always being faster.

Given no previous experience and one hour of training for
each mode, which would win? :-)

I recently bought a high end HF rig and would not have considered it
if it had been the same rig with no keyer built in.
My code skills have been lost from years of not using them, but now
that I don't have to gain a certain word speed to "upgrade" I have a
paddle and will be starting CW again.   Ashame that a hobby that is
suppose to promote experimentation and communication had blocked
of so many frequencies for "elitist" use.
******************   Oh by the way straight from the
current ARRL QST April issue Page 12 "This Just In" "U.S. hams
who wish to operate with full privileges in European countries covered by
the
European Conference of Postal and Telecommunications Administrations

(CEPT) must now hold an Extra class licensee."******************
I was studying for my Extra, but if all it is to be, is another elitist" use
of
rules and reg's to validate the "high standing" of VEC's and 'higher ups'
then
maybe I should skip the Extra Class. I have heard OT's and many in the
Extra portions of the bands using as poor practices / illegal power / rude
and
foul language as in any other portions of the bands.   If someone new or at
a
lower class licensee want so misbehave, restricting them to operate outside
Extra band plans will not create good manors and legal behavior. Didn't
anyone learn a thing from prohibition nearly a century ago.   Same
philosophy.

Those bits of it with an uninterrupted view of the sky, anyway. Doesn't
work too well in my basement office. Or under the canopy of trees on the
road outside my house.

Of course! But what cell phone has a full sized keyboard?

And if the Morse operators are allowed full sized Morse keyboards,
the situation changes yet again.

With a decent 10 speed bicycle I could win the Boston Marathon
(as long as everybody else has to run).

Neither do any of the traditional time and frequency stations without
a working antenna.

Your concern misses the whole point. It is a *privilege* to hold an extra class licensee... especially if she's cute!

I don't see the connection. btw, all US amateur licenses that required code tests were available for just a 5 wpm code test and a doctor's note since 1990 (18 years) and for just a 5 wpm code test since 2000 (8 years).

> Ashame that a hobby that is

What frequencies were those?

The only CW/data spectrum reserved for Extras is the bottom 25 kHz of 80, 40, 20 and 15 meters.

Extra or Advanced.

> I was studying for my Extra, but if all it is to be,

> "high standing" of VEC's and 'higher ups'
> then maybe I should skip the Extra Class.

The change has nothing to do with the VECs. It is the result of CEPT's

Radio Regulatory Working Group re-evaluating the equivalence between
CEPT country license requirements and US license requirements.

IOW, the CEPT folks decided that having a General or Technician class license does not qualify the licensee to have full operating privileges in CEPT countries. Since Techs and Generals don't have full US operating privileges, why should they have full privs in CEPT countries?

Have you heard those goings-on from hams using non-voice modes?

That would be correct. Sometimes I/we forget that this is an international group. Sorry about that.

Anyhow, the point is that there are a lot of Amateurs who might not be expected to know that there is a Keyer or even a Key jack on an HF radio because they wouldn't be expected to

Where do you think most ntp servers get their time these days?

The concept of reserving privileges by license class is not a bad one.
While some may argue that any sort of class distinctions are elitist,
there are many of us who believe in education and advancement.

While I would not want to mess with the license class band access as it
is now, I would not at all object to new license classes that were just
based on knowledge, and didn't confer any particular privileges.

Knowledge is way cool! 8^)

It would seem consistent and appropriate.

I've heard a little - not much. But by and large, most people who use non-voice modes such as PSK31 and OOK Morse are going to be less likely to engage in shenanigans because the very nature of the modes slows things down a little, and the Op is more likely to give a little more thought about what they type or key.

And let's not forget that everyone out there can hear what goes on on SSB, so statistically things will get skewed a bit.

Amateur radio is largely a knowledge and skill based activity, and it has been for a long time. I look at the different classes as a way to work up to a high level of that knowledge and skill, rather than require the highest level at the start. Even the technician level license allows significant privileges, such as the ability to construct high power stations and experiment in a lot of different areas.

That Ops are encouraged to gain in skills and knowledge are a great thing IMO. The increased privileges are a nice enticement.

That was essentially the case in 1954 when the Extra Class license didn't confer any particular frequency privileges. With a lowly mail-order Conditional Class license obtained by a lowly high school junior, I earned access to all amateur radio frequencies. ex-WN5DXP

: That would be correct. Sometimes I/we forget that this is
: an international group. Sorry about that.

No problem :-)

: Anyhow, the point is that there are a lot of Amateurs who
: might not be expected to know that there is a Keyer or
: even a Key jack on an HF radio because they wouldn't be
: expected to.

But I rather think those who do expect it would be rather annoyed if it
wasn't there. The question is what percentage of amateurs is that overall
in the market for HF radios..?

Personally I've never been interested in CW but it would be rather nice if
a radio I bought had the facility, just in case. Particularly if the
additional cost was negligible.

IIRC I can generate and send text-messages using the Motorola Phone Tools computer software connected to my Motorola cellphone via a USB port, thereby using a full-size screen and keyboard to do so. I use that setup to edit my "call list" in the 'phone.

Although I have received text messages on that 'phone, I have yet had no need to send one. Compared to the JHS and HS crowd, I am certainly "deprived".

So given a typist of comparable proficiency to the Morse operators (meaning probably in the region of 80 - 100 wpm) it is most likely that the text message would win the race; depending on system delays, which again is not a fair comparison to face to face Morse. You could wait for hours, or days, or even years for the bands to open to a particular location!!

It all goes to show that you must compare like with like. I am sure that the Morse operators would have also lost if they were forced to send extraneous letters as they cycled through to find the correct one, as the text'er had to.

Ultimately, we need to treat these various modes as methods of sending text - no more and no less. Two methods that send the same text are competing modes, regardless of whether keyboards, a telephone keypad or a telegraph key is used to send it. A method that sends those blocks of text faster and with fewer errors is better. A slower, more error prone method is inferior. Not all encoding schemes are equal. Some, like ASCII, encode the entire alphabet, including upper and lower case. Others, like ISO-Latin-1, can encode even more characters. In general, the more inclusive encoding method is better. An encoding scheme that is easily adapted to error correction (parity, automatic re-send, etc.) is also considered better. So claiming that phones, data modes and Morse can't be compared because they are somehow "different" ignores the ultimate reason for their existence - text communication via radio.

Respectfully I disagree. None of these methods compete with each other. They are just different applications of technology, some simpler, some more complex, and some quite strange (read feld-hell) Users can use whatever mode they are interested in, and are on equal footing.

> A method that sends those blocks
> of text faster and with fewer errors is better. A slower, more error
> prone method is inferior.

Here is some difficulty when we try to apply your description to HF. It is difficult to get a high data rate via HF due to the relatively noisy conditions.

An example is Digital SSTV vs analog SSTV. On the face of it, digital SSTV has it all over the old fashioned variety. No image size restrictions, digital accuracy, and the jpeg you send looks the same on the recipient's end. The problem is under certain conditions that exist fairly often, the analog SSTV picture is sent, looked at and stored, while the digital version never arrives, because noisy condx causr the receiving end to send a continual stream of "Retry please".

NOw to apply this to text modes, this would make PSK31 inferior to PSK64, 128. and so on. But the psk31 text reads about the same speed, and takes up less bandwidth.

I disagree! Morse Code is more than simply a method of sending text.

> Two methods that send the same text

> or a telegraph key is used to send it.

I disagree again! Lots of differences, for example, a simple telegraph
key can be made in a few minutes with simple tools. Keyboards are a
bit more work.

> A method that sends those blocks
> of text faster and with fewer errors is better. A slower, more error
> prone method is inferior.

If the only factors considered are speed and accuracy, that's true.
But there are other
factors when it comes to things like amateur radio - bandwidth,
required equipment,
etc.

See above about what factors are considered.

> So claiming that phones, data modes and Morse

One can compare all sorts of things, and have the results come out
differently
depending on the factors considered. Is rollerblading "better" than
running because
the same person can go faster and farther for the same effort?

The real point of the Jay Leno clip was to show that the assumption of
"newer is faster/better" turned out to be exactly wrong. The audience
and the woman Leno talked to were *sure* the text-messager would win,
yet Morse Code was faster.

If all you want to do is send text from point A to point B, there are
lots of good modes.

But consider these factors:

1) Morse Code can be manually encoded and decoded by humans and
machines. RTTY, ASCII, etc., cannot, at least in practical terms.
(Yes, I once got to the point where I could usually recognize "RYRYRY"
and "W3ABT" in 45.45 baud Baudot FSK, but have you ever met anyone who
could have conversations that way?)

2) Morse Code can be done with audio or video - by watching a flashing light, text on a screen, or simply listening to it. Audio reception is a big advantage in situations where a visual display isn't practical.

3) Morse Code can be implemented with a bare minimum of simple equipment, or with complex equipment, or anything in between.

There are lots more, that's just a sample.

None of this proves the idea that all radio amateurs must use Morse Code, or must pass some sort of test on it, etc. That issue has been decided (at least in the USA).

Should radio amateurs not *use* Morse Code any more?

As I said in both a print interview and a TV interview during the December storms here while passing gobs of hospital traffic using PTT UHF FM ham radios when the electrical power, cellphones, internet circuits , landlines, and even the sat-phone connections were all down to the hospitals on the Oregon coast, we showed that 1950s technology can get through when 1990s technology fails.

> Ultimately, we need to treat these various modes as methods of sending text - no more and no less. Two methods that send the same text are competing modes, regardless of whether keyboards, a telephone keypad or a telegraph key is used to send it. A method that sends those blocks of text faster and with fewer errors is better. A slower, more error prone method is inferior. Not all encoding schemes are equal. Some, like ASCII, encode the entire alphabet, including upper and lower case. Others, like ISO-Latin-1, can encode even more characters. In general, the more inclusive encoding method is better. An encoding scheme that is easily adapted to error correction (parity, automatic re-send, etc.) is also considered better. So claiming that phones, data modes and Morse can't be compared because they are somehow "different" ignores the ultimate reason for their existence - text communication via radio.

Indeed, compare it with "text communication via radio" not with sending Morse across a table. Try the same test, but sending a message to ZL or VK, I am sure that the SMS message would win. The text message would have arrived long before the band opened and you tuned up your antenna.

I hope you'll pardon me when I ask "Which deity spoke to you and laid down those particular points of Absolute Truth?". What's all this "We need to" and "no more and no less" and "xxx is better" and "yyy is inferior" and "... is also considered better"?

If you're willing to state those as _your_ personal opinions of the basis on which two partially-competing methods of encoding and communicating _should_ be compared (and that no other criteria need apply), I have no objection at all.

I do, however, object in principle to the idea that these are the highest (or only) criteria, or that they're somehow sacred.

And, I also object to the idea (which I think is implied by the tone of your other messages - please correct me if I'm wrong) that the choice of communication methods is somehow exclusive... that the fact that a method which is superior (by your criteria, perhaps) means that other methods that you find inferior should be wiped out or abandoned... or that people who prefer to use the other methods are somehow responsible for Holding Back The True Progress.

My own perspective is that people may have *many* criteria for chosing a means of communication (by radio or otherwise). Bandwidth, or bandwidth*reliability is not the sole criterion that people use, in practice, nor do I think there's any reason that it should be. Life is full of tradeoffs between different criteria - information bandwidth per Hz of spectrum, robustness of encoding, suitability for multi-point communication, resistance to different sorts of interference, cost of equipment, availability of equipment, and so forth. I communicate with my wife by voice, by email, by telephone, by scribbling half-illegible notes on scraps of paper, and by bringing home flowers... different methods, for different types of information-passing under varying conditions.

In commercial communications and public-safety, bandwidth (or payload) and reliability and cost all play a big factor. In military communications, reliability and security seem big, bandwidth is important, and cost (of equipment at least) tends to take a back seat.

Ham radio is a much more diverse motivation-space. Some people optimize their operations as for public safety and commercial (the EMCOM folks), others for "most distance per watt" or "per dollar spent on the radio" (QRP folks, homebrewers, and other experimenters), others for portability, others for plain ordinary fun (according to their own definition of fun... for some folks, using single-frequency crystal-oscillator transmitters is just what gets their rocks off :-)

There's plenty of room in ham radio for different modes of operation. Saying that we all *have* to abandon Morse (or SSB, or voice, or AM, or...) and strap computers to all of our rigs, in order to encourage experimentation and use with newer modes, is really missing the point... it's implicitly denying a large percentage of hams the right to explore those aspects of ham radio that *they* find interesting and worthwhile.

If we were all being paid to do all of this stuff, then the people paying us would perhaps have the right to set our agendas. We aren't (and by the rules of the game, cannot be... at least, not here in the

US) and so we get to set our own priorities, operating-mode and otherwise.

[And, for the record - I operate CW only rarely, and have enjoyed experimenting with packet and the newer digital modes quite a bit.]

Not to mention other aspects not involving modes.
My favorite aspect of ham radio is pretty much mode
independent - experimenting with antennas.

But where's the fun and the challenge?

If I want to do business with someone in Australia, I'll pick up the telephone and avail myself of the investment of billions of dollars in research money and construction cost for a worldwide communications infrastructure. If my only objective in this case is to communicate with a specific individual in Australia, right now, reliably, that's the way to do it.

If I wait for a band opening and manage to snare some rare DX using only my modest radio equipment and my wits, that's a completely different goal. Comparing "communication" via ham radio and "communication" via sending a text message is a lot like comparing traveling over the ocean on a commercial airliner with doing it on your own sailboat. Yes, in both cases you are transported from point A to point B. But goals and priorities that determine "success" for these two endeavors are much different.

I'm bemused by where this discussion of the Leno "Morse vs. Texting" segment has gone. I have to give Leno's writers credit for coming up with something entertaining and unique. It even gave ham radio a bit of publicity. But a literal comparison of the two items misses the point of ham radio as a hobby and avocation.

That's not guaranteed at all.

> The text message would have
> arrived long before the band opened and you tuned up your antenna.

You're assuming the band isn't open and the antenna needs tuning. That changes the conditions of the test.

If the path from A to B is already set up and working, the Morse Code speed advantage may be even greater than it was on the Jay Leno show, because it only takes a fraction of a second for the direct radio signal to reach the Antipodes, but the text message will be relayed many times to go the same distance.

KB9X, in another post, makes a valid comparison between riding on a
jet airliner and piloting your own sailboat. Are sailboats "obsolete"
because they're slower?

> Indeed, compare it with "text communication via radio" not with sending
> Morse across a table. Try the same test, but sending a message to ZL or VK
,
> I am sure that the SMS message would win.

That's not guaranteed at all.

> The text message would have
> arrived long before the band opened and you tuned up your antenna.

>You're assuming the band isn't open and the antenna needs tuning. That
changes the conditions of the test.

>If the path from A to B is already set up and working, the Morse Code
speed advantage may be even greater than it was on the Jay Leno show,
because it only takes a fraction of a second for the direct radio
signal to reach the Antipodes, but the text message will be relayed
many times to go the same distance.

>KB9X, in another post, makes a valid comparison between riding on a
jet airliner and piloting your own sailboat. Are sailboats "obsolete"
because they're slower?

The test made an interesting piece of tv, but nothing more than that. All it
proved is that mobile phones have a slower and clumsier way of inputting
text than a proficient cw operator.

Jeff

Let's not forget that the texters have their own limitations, such as being in range of an antenna, hopefully no power outages or disasters that cut off the service.

But truly that wasn't the point of the demonstration anyhow. All other things being equal, texting is slower because of the physical aspect differences between the two.

Voice would have beaten either OOK Morse or texting. But who cares about that really? It's all good.

side trip....

I've alway thought that there are some interesting parallels between regular folks and Us Hams, with seemingly different impressions by the public.

humor alert!

Using an HT isn't cool, but Using a cell phone is.

Using OOK texting isn't cool, but using cell phone texting is.

My Suzuki Vitara with it's legal height Bugcatcher antenna isn't cool, but if I put a Penn State banner on it during football season I am waaaay kewl!

Humor alert off

I really need to post some pictures of the Vitara all set up. That 13+ foot antenna so completely overwhelms the thing that it almost becomes cool in it's own right. The only downside is that so many people want to come over to talk to me about it that I sometimes don't get to operate it as much. OTOH, I was talking to a Fish and Game officer who is going for his license now

==> ARRL EXPO REVVING UP FOR THE 2008 DAYTON HAMVENTION

ARRL EXPO Coordinator Katie Breen, W1KRB, tells that plans for the ARRL EXPO <http://www.arrl.org/expo> at this year's Dayton Hamvention <http://www.hamvention.org> are coming together nicely. "Our current focus is on the new look and feel of our space. In past Hamventions, Forum Room 5 was located adjacent to the ARRL space. It is now moving to the Silver Arena, giving us more room and the opportunity to spread out a bit and do more creative things inside the EXPO."

Breen said that the ARRL EXPO team is looking at expanding the Field Services area to accommodate more programs and activities, including a larger meet-and-greet area for members to visit with ARRL President Joel Harrison, W5ZN, as well as the many other League officials and staff who will be on hand to answer any questions.

"The Field Services area will boast a large interactive display devoted to Logbook of the World <http://www.arrl.org/lotw> for real time demonstrations, as well as a question-and-answer session with ARRL Web and Software Development Manager and LoTW developer Jon Bloom, KE3Z," Breen added.

Personnel from the ARRL DXCC Branch will be on hand to check DX cards and applications for all ARRL awards; JARL personnel will check cards and applications for JARL awards. All cards, including old cards, cards from deleted countries and cards for 160 meters, will be eligible for checking. Applications will be limited to 120 cards; more cards will be checked as time and volunteer Card Checkers are available. See the DXCC Web site <http://www.arrl.org/awards/dxcc> for the latest program information and current forms.

The ARRL Bookstore and Membership area will continue to buzz with activity, particularly with all of the new publications and products being offered this year. QST Editor Steve Ford, WB8IMY, will be on hand to sign your new copy of "ARRL's VHF Digital Handbook." QST Contributing Editor and author of the popular QST column "Hands-On Radio" H. Ward Silver, N0AX, will also be available to sign copies of his latest book, "ARRL's Hands-on Radio Experiments." The new desktop and pocket-sized versions of the "ARRL Repeater Directory" are sure to be a hit with their new handy indexing tabs on the cover, easier-to-read listings and "Key to Repeater Notes" located right up front.

Visit the Dayton Hamvention Web site <http://www.hamvention.org/hv2008/tickets/tickets.html> to buy tickets at the discounted rate. Hotel rooms are filling up, so don't think twice -- if you've always wanted to attend Hamvention and have never had the chance, make this year your year to go. Hotels in the Dayton area can be found at the Dayton Montgomery County Convention and Visitors Bureau Web site <http://www.daytoncvb.com/accommodations/>. Keep updated with ARRL EXPO activities on the ARRL Web site <http://www.arrl.org/expo>.

==> W1AW TO CELEBRATE WORLD AMATEUR RADIO DAY AS NU1AW

Each year on the anniversary of its founding, April 18, the International Amateur Radio Union (IARU) marks World Amateur Radio Day <http://www.iaru.org/rel030418.html>. On this, the 83rd anniversary of its inaugural meeting in Paris, the IARU dedicates World Amateur Radio Day to the radio amateurs, educators and administrators who use Amateur Radio to support technology education in the classroom.

To call attention to the occasion in advance, ARRL staffers will be activating W1AW in the CQ WPX SSB Contest <http://www.cqwpx.com> this weekend (March 29-30) using the IARU club call sign NU1AW. By celebrating the event, staffers hope to provide an opportunity for hams worldwide to put NU1AW in their logs, chase the WPX award <http://www.cq-amateur-radio.com/cqworldwidewpxawards.html> and learn about HF propagation as the world turns through day and night not once, but twice! Springtime propagation near the equinox is enhanced on the HF bands, even during the Solar Cycle minimum, so it's worth taking a listen even if the HF bands have been quiet lately.

This year's theme for World Amateur Radio Day is "Amateur Radio: A Foundation of Technical Knowledge." What better way to express the theme than by engaging in one of the largest international radiosporting events. ARRL Contest Branch Manager Sean Kutzko, KX9X, said, "If you haven't tried HF contesting or the WPX contest, the general format is to exchange a signal report (a simple '59' will do nicely) and a serial number (the number of the contact in the contest for you). The contest

Web site spells out the way to compute your score, but the fun of this contest is to contact as many different prefixes as possible. For example, NU1AW counts as the NU1 prefix and KX9X counts as KX9. If you're new to HF, your prefix might be one sought after by those calling CQ! The WPX contest also features a 'Rookie' category for new radiosport folk, so be sure to send in your log as described by the rules -- it's easy!"

World Amateur Radio Day is also an opportunity for publicizing Amateur Radio to the interested public that may not be familiar with ham radio activities. Radiosport is an excellent way to introduce our service to teachers and students, as well. Competitive activities are an important focus for students to take the opportunity to ask questions about how signals get "from here to there" while watching hams make rapid-fire contacts around the world or even making a contact or two themselves, Kutzko said.

"NU1AW is not expected to be seriously competitive in the event," Kutzko explained, "but will make every attempt to be on the air as propagation warrants, so we hope to hear you marking the day and making World Amateur Radio Day a part of your springtime ham radio operation."

==> W1AW ENDOWMENT FUND DRIVE

It's an unimposing brick building, sitting on a small knoll in a residential area, yet not out of place. Accented with unique detail, the architecture of the building sets it back in time and apart from its surroundings. Round windows grace the end walls of the rectangular building and a formal entrance, reserved for special occasions, lies at the top of steps leading down to Main Street in Newington, Connecticut.

This simple and graceful building represents far more history and accomplishment than most passersby would imagine. Cross the threshold and you enter another world, one in which the magic of radio communication has spanned several generations. You can feel the spirit of Hiram Percy Maxim, whose "Old Betsy" rotary spark gap transmitter graces the vestibule. You can almost see HPM sitting at his desk in the era of Amateur Radio when sparks flew and each contact was a rare event. And his spirit of adventure and experimentation -- and above all, service -- is still alive at W1AW, the Hiram Percy Maxim Memorial station.

The days and nights spent at W1AW by generations of ham radio operators have paved the way for all amateurs. They have left their mark and we are bound to continue the traditions that define our history. While we celebrate that history, W1AW embodies so much more. Through its round windows you can glimpse the future as well as the past.

Today, W1AW is a showcase for an Amateur Radio Service with capabilities that surpass what HPM, with one of the most imaginative minds of his generation, could have envisioned. A vintage AM station sits gracefully alongside D-STAR and other advanced digital technologies. A matrix of antenna connections and a wall of transceivers and amplifiers for nearly every band bring daily bulletins and Morse code practice to every corner of the country and the world. The guest operating suites showcase the most up-to-date equipment.

W1AW has come a long way since his Old Betsy ionized the air with every dit and dah from Hiram Percy Maxim's fist! He would be glad to see the station that W1AW has become. In recent years, since the ARRL launched the W1AW Endowment Fund, the station has been modernized without sacrificing its character and history. Income from the Endowment Fund has contributed to the replacement of aging equipment and antennas. New band pass filters, computers and cables have been installed.

The ARRL is continuing to build the permanent fund -- The W1AW Endowment Fund -- to cover W1AW annual operations and capital needs. The next steps to improve the station will be to upgrade software and continue to replace equipment that is at or near the end of its reliable service. In 2008, new transceivers and amplifiers in the three operating suites will be installed to enhance your experience when you visit and contact hams back home, or even when you work W1AW from your own shack.

ARRL Chief Executive Officer David Sumner, K1ZZ, said, "Your financial commitment in 2008 will help ARRL maintain W1AW as America's Amateur Radio station. Your generosity will send a strong message that you honor the history of W1AW and are committed to a bright future for W1AW as the heart of our service. ARRL will use your contribution to build a fund to ensure that the flagship station, W1AW, will continue to represent the best of all of us. If you haven't visited ARRL and W1AW recently, I hope you'll plan a trip to Newington and arrange to operate W1AW and see for yourself the magical role that W1AW plays for Amateur Radio."

If you you'd like to discuss your giving plans, please call the Development Office at 860-594-0397 or contact ARRL Development Director Mary Hobart, K1MMH, via e-mail <k1mmh@arrl.org>.

==> TWO NEW INSTRUCTORS JOIN THE TEACHERS INSTITUTE TEAM

The ARRL is pleased to announce the addition of two new instructors to the ARRL Teachers Institute staff this year. "For the first time this year, the ARRL Teachers Institute <http://www.arrl.org/FandES/tbp/ti.html> will offer 72 teachers the opportunity to explore and experience wireless technology basics, teaching of basic electronic concepts integral to micro controllers and robotics, bringing space technology into the classroom, radio astronomy basics, building a radio telescope, building and programming a robot and more," said ARRL Education Services Manager Debra Johnson, K1DMJ. "In past years, Mark Spencer, WA8SME, taught each course, but this year, he will have a little help." In past years, the ARRL Teachers Institute was limited to 48 teachers.

Miguel Enriquez, KD7RPP, was first licensed as a Novice in 1976 and learned about electronics by building a Heathkit; he upgraded to an Amateur Extra class license in 2002. Enriquez teaches mathematics, statistics and psychology at Pueblo High School in Tucson, Arizona, and has 10 years of experience teaching at the community college and university levels. In 2005, Enriquez established an Amateur Radio club at Pueblo High School. Through donations of equipment and support from individuals and ARRL, the club grew to 26 members and five licensed students exploring satellite communications, ATV, robotics, HF, EchoLink and weather satellite imagery.

Nathan McCray, K9CPO, is a sixth grade teacher at East Elementary School in Zion, Illinois where he has integrated Amateur Radio, electronics and robotics into the his science and math curriculum. McCray's knowledge areas include electronics, computer programming, communications, Amateur Radio, computer systems, leadership and teaching. His background includes instruction at the community college level, as well experience as a senior instructor at a US Navy technical school. McCray has been licensed for 24 years and holds an Amateur Extra class license.

Enriquez and McCray will each co-teach a Teachers Institute session this summer with lead instructor Mark Spencer WA8SME. They are expected to take on lead instruction responsibilities in 2009. Six Teachers Institute sessions will be offered in 2008: April 7-10, Tampa, Florida, Museum of Science & Industry; June 16-19, Rocklin, California, Parallax Facility; June 25-28, Tucson, Arizona, Pueblo Magnet High School; July 14-17, Dayton, Ohio, P&R Communications; July 28-31 and August 4-7, Newington, Connecticut, ARRL Headquarters.

==> FCC FINES COLORADO COMPANY FOR SELLING "NON-CERTIFIED CITIZENS BAND (CB) TRANSCEIVERS"

On Friday, March 21, the FCC released a "Forfeiture Order" <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-08-597A1.pdf> in the amount of $7000 to CB Shop and More in Loveland, Colorado for "willful and repeated violations of Section 302(b) of the Communications Act of 1934, as amended (Act), and Section 2.803(a)(1) of the Commission's Rules." According to the FCC, CB Shop and More was selling a "non-certified Citizens Band ('CB') transceiver." According to the Forfeiture Order, the CB Shop and More has been in the Commission's sights since at least 2002.

Section 302(b) of the Act states: "No person shall manufacture, import, sell, offer for sale, or ship devices or home electronic equipment and systems, or use devices, which fail to comply with regulations promulgated pursuant to this section." Section 2.803(a)(1) reads that "Except as provided elsewhere in this section, no person shall sell or lease, or offer for sale or lease (including advertising for sale or lease), or import, ship, or distribute for the purpose of selling or leasing or offering for sale or lease, any radio frequency device unless in the case of a device subject to certification such device has been authorized by the Commission."

On January 26, 2007, and March 8, 2007, the Denver Office received complaints alleging that CB Shop and More was selling non-certified CB transmitters and modified 10 meter band radios. On March 30, 2007, the Denver agents again visited CB Shop and More and noted that one of the

CB transceivers offered for sale was a Galaxy Model DX99V and asked if they could purchase the transceiver. "The Denver agents subsequently identified themselves as FCC agents, and proceeded to interview the owner of the CB Shop. The owner acknowledged that he once received a Citation from the FCC, but he thought it was still legal for them to sell the referenced CB transceivers."

On August 28, 2007, the Denver Office issued a "Notice of Apparent Liability" (NAL) in the amount of $7000 to CB Shop and More. In the "NAL," the Denver Office found that CB Shop and More "apparently willfully and repeatedly violated Section 302(b) of the Act, and Section 2.803(a)(1) of the Rules by offering for sale a non-certified CB transceiver." CB Shop and More filed a response on September 17, 2007 (Response). In its "Response," CB Shop argued that "Galaxy Model DX99V does not require certification by the Commission because it is not a CB transceiver." Consequently, CB Shop and More argued that the forfeiture should be cancelled.

According to the FCC, the proposed forfeiture amount in this case was assessed in accordance with Section 503(b) of the Act, Section 1.80 of the Rules and "The Commission's Forfeiture Policy Statement and Amendment of Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines." In examining CB Store and More's "Response," Section 503(b) of the Act requires that "the Commission take into account the nature, circumstances, extent and gravity of the violation and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and other such matters as justice may require."

CB radio transceivers are subject to the equipment certification process and must be certified and properly labeled prior to being marketed or sold in the United States. Unlike CB radio transceivers, radio transmitting equipment that transmits solely on Amateur Radio Service frequencies is not subject to equipment authorization requirements prior to manufacture or marketing; however, some radio transmitters that transmit in a portion of the 10 meter band of the Amateur Radio Service (28.000-29.700 MHz) are equipped with rotary, toggle or pushbutton switches mounted externally on the unit, allowing operation in the CB bands after completion of minor and trivial internal modifications to the equipment.

To address these radios, the Commission adopted changes to the CB-type acceptance requirements by defining a CB transmitter as "a transmitter that operates or is intended to operate at a station authorized in the CB." Section 95.655(a) of the Rules also states that "no transmitter will be certificated for use in the CB service if it is equipped with a frequency capability not listed in Section 95.625 of the Rules" (CB transmitter channel frequencies). Also, the Commission's Office of General Counsel released a letter on the importation and marketing of Amateur Radio transmitters, clarifying that transmitters that "have a built-in capacity to operate on CB frequencies and can easily be altered to activate that capacity, such as by moving or removing a jumper plug or cutting a single wire" fall within the definition of a CB transmitter under Section 95.603(c) of the Rules and therefore require certification prior to marketing or importation. The Commission's Office of Engineering and Technology "evaluated Galaxy Model DX99V here and determined that it could easily be altered for use as a CB transceiver."

The FCC examined CB Shop and More's Response to the NAL "pursuant to the statutory factors above," and in conjunction with the Forfeiture Policy Statement. As a result of the review, the Commission concluded that CB Shop and More "willfully and repeatedly violated Section 302(b) of the Act, and Section 2.803(a)(1) of the Rules. Considering the entire record and the factors listed above, we find that neither reduction nor cancellation of the proposed $7,000 forfeiture is warranted." The Commission ordered that, pursuant to Section 503(b) of the Act and Sections 0.111, 0.311 and 1.80(f)(4) of the Commission's Rules, "CB Shop and More is liable for a monetary forfeiture in the amount of $7,000 for willfully and repeatedly violating Section 302(b) of the Act, and Section 2.803(a)(1) of the Rules."

==> MERLE GLUNT, W3OKN (SK)

Merle Glunt, W3OKN, of Mount Union, Pennsylvania, passed away March 16. He was 90. Glunt served as the ARRL consultant for the World Administrative Radio Conference 1979 (WARC-79), and through years of hard work, was instrumental in gaining the 12, 17 and 30 meter bands for the Amateur Service.

During World War II, Glunt was the senior radio intercept analyst in the Radio Intelligence Division of the Federal Communications Commission, specializing in worldwide German espionage radio communications and Philippine guerrilla radio circuits. He served as the FCC Radio Intelligence Division (RID) liaison with the Office of Strategic Services (now the CIA) and the British Security Coordination. After the war, he was in charge of US Naval communications security surveillance and traffic analysis. He was a member on the US Navy task force charged with the creation of the Armed Force Security Agency (now the National Security Agency).

Returning to the FCC during the Korean conflict, Glunt later held such positions as Chief of the Treaty Branch and Assistant Chief Engineer, responsible for the Frequency Allocation and Treaty Division and International and Operations Division. He was active in US preparation for various national and international telecommunications conferences, serving frequently as a US spokesman at NATO and the International Telecommunication Union (ITU), and international conferences in Canada, Great Britain, Spain and Brazil. As a consequence, Glunt served as a member of US delegations that were responsible for the development of international radio terms and definitions, the Maritime Mobile and Amateur Radio Services rules and regulations. Sponsored by the Agency for International Development (USAID), he organized and participated in a two-man team of experts, at the request of the prime minister of Thailand, to study and make recommendations to reorganize the Thailand Radio Communications Activity to facilitate communications in that area during the Korean conflict.

ARRL Chief Executive Officer David Sumner, K1ZZ, remembered Glunt "as a key figure in gaining allocations at 10, 18 and 24 MHz for the Amateur Service at the 1979 World Administrative Radio Conference (WARC-79). Anyone who ever operated on what we used to call the 'WARC bands' owes Merle a great debt. In 1973, as Assistant Chief Engineer of the FCC, Merle participated in a four-member study group that developed a report demonstrating the desirability of these amateur allocations. After retiring from the FCC, Merle became a consultant to the ARRL and was the most regular and most visible ARRL presence at dozens of Washington meetings during domestic preparations for WARC-79. He earned a position on the US delegation to the conference in Geneva specifically to represent the Amateur Services, and he did so with great skill and professionalism. It was my good fortune to have Merle as a mentor."

Richard L. Baldwin, W1RU, ARRL General Manager at the time of WARC-79, said, "Merle believed that there was no limit to what you could accomplish so long as you didn't worry about who got the credit for it and Merle lived that philosophy. As a member of the FCC staff, as a participant in many ITU meetings, as an advisor to ARRL and IARU, Merle was influential in organizing quiet and effective support for the Amateur Service. Those of us who worked with Merle know what a privilege it was to benefit from his expertise. Speaking personally, Merle was a good friend for many, many years and I shall miss him."

Glunt was a Life Member of the ARRL, the Quarter Century Wireless Association, the Radio Intelligence Division Association, the Old Old Timers Club, the Society of Wireless Pioneers and the Veterans Wireless Operators Association. Also active in the National Traffic System, he was also a member of the FISTS CW Club, the Association of Former Intelligence Officers, the US Naval Cryptologic Veterans Association and the US Naval Institute.

A funeral service was held March 21. Memorial contributions in remembrance of Merle Glunt may be given to the Home Nursing Agency, 900 Bryan St, Huntingdon, PA 16652 or to the American Cancer Society, 10955 Raystown Rd, Ste B, Huntingdon, PA 16652.

==> ARRL PRESIDENT APPOINTED TO ARKANSAS STATE BOARD

Arkansas Governor Mike Beebe has appointed ARRL President Joel Harrison, W5ZN, to a four year term on the Board of Directors of the Arkansas Science & Technology Authority <http://www.asta.arkansas.gov/index.html>. Harrison's appointment was approved by the Arkansas Senate. "It's an honor to be appointed by Governor Beebe to serve the people of Arkansas in this area that recognizes not only my professional accomplishments, but those related to Amateur Radio as well," Harrison said. The Arkansas Science & Technology Authority was created by statute in 1983 with the mission to bring the benefits of science and advanced technology to the people and state of Arkansas. This mission is addressed by strategies to promote scientific research, technology development, business innovation, and math, science and engineering education.

==>SOLAR UPDATE

Tad "How the March Sun feels like May!" Cook, K7RA, this week reports: It is exciting to see heightened solar activity one week into spring. Currently, three sunspots are visible: 987, 988 and 989. The consensus says that all seem to be old Solar Cycle 23 spots. But with the three sunspot groups so close to the Sun's equator, it is hard to tell for certain. We know that Cycle 24 spots should have magnetic polarity opposing the magnetic signature of Cycle 23 sunspots, but this is also true for sunspots below the equator relative to sunspots above. Average sunspot numbers for the reporting week (Thursday through Wednesday) rose more than 18 points from the previous week, to 23.4. The average daily solar flux was up nearly six points to 75.4. The average geomagnetic indicators were unchanged, but this is because they fell from the start of last week and rose this week. Sunspot numbers for March 20 through 26 were 0, 0, 0, 14, 35, 52 and 63 with a mean of 23.4. The 10.7 cm flux was 68.4, 68.2, 69.6, 72, 79.4, 88.6, and 81.6 with a mean of 75.4. Estimated planetary A indices were 8, 5, 5, 8, 4, 4 and 27 with a mean of 8.7. Estimated mid-latitude A indices were 7, 4, 4, 7, 2, 3 and 16 with a mean of 6.1. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you courtesy of Robert Browning.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, another running of the NCCC Sprint is on March 28. The CQ WW WPX Contest (SSB) is March 29-30. Next weekend, look for the YLRL DX-YL to NA-YL Contest (CW) on April 4-6. The SP DX Contest, the EA RTTY Contest, the QCWA Spring QSO Party, the Missouri QSO Party and the Yuri Gagarin International DX Contest are all on April 5-6. The RSGB RoPoCo 1 is April 6, the RSGB 80 Meter Club Championship (CW) is April 7, the ARS Spartan Sprint is April 8 and the NAQCC Straight Key/Bug Sprint is April 9. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, April 6, 2008, for these online course sessions beginning on Friday, April 18, 2008: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a

particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* "Hints and Kinks": Do you have an idea or a simple project that has improved your operating? Maybe you've taken something commonly found around the home and developed a ham radio use for it? Why not share your hints with fellow hams in "Hints and Kinks," a monthly column in QST. If we publish your hint, you will receive $20. Send your hints via e-mail to <h&k@arrl.org> or to ARRL Headquarters, Attn: "Hints and Kinks," 225 Main Street, Newington, CT 06111. Please include your name, call sign, complete mailing address, daytime telephone number and e-mail address. Items in "Hints and Kinks" have not been tested by QST or ARRL unless otherwise stated. Although we can't guarantee that hints published will work for every situation, QST makes every effort to screen for harmful information.

* Communications Academy Set for April: The 10th Annual Communications Academy will be April 5-6 at South Seattle Community College. Communications Academy is a non-profit coalition of volunteer communications teams put together to provide a high quality, professional-grade training opportunity for the various emergency communications teams around the Pacific Northwest. By providing a once-a-year large-scale venue for training, volunteer communicators are exposed to topics in emergency management, communications techniques and protocols, real-life emergency responses, and other pertinent subjects, that might not otherwise be available to them. The Communications Academy is open to anyone with an interest in emergency communications, volunteer or professional. The presentations are designed to promote the development of knowledgeable, skilled emergency communicators who will support their local communities during a disaster or emergency response. There will be two keynote speakers on Saturday: King County Emergency Management Coordinator Rich Tokarzewski, and Charles Simonyi, KE7KDP, astronaut on the International Space Station. The Sunday 2008 keynote speaker is ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD. Registration for both days is $50; if participants can only attend one day, the fee is reduced to $30. All fees include lunch. For more information, please visit the Communications Academy Web site <http://www.commacademy.org/2008/index.php>.

* Notes from the DXCC Desk: ARRL DXCC Manager Bill Moore, NC1L, reports that the following operations have been approved for DXCC credit: the 2008 VP6DX DXpedition to Ducie Island; the 2008 TX5C DXpedition to Clipperton Island, and the 2007 S05A operation to Western Sahara have been approved for DXCC credit. If you have any questions about these

operations, please send an e-mail to the ARRL DXCC Desk <dxcc@arrl.org>.

* Corrections and Clarifications: Last week, we reported that Emmett Freitas, AE6Z (ex-W6OIA) (SK), participated in the first-ever VE testing session. Freitas participated in the first-ever ARRL VE testing session.

===

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Amateur Radio Newsline(tm) Report 1598 - March 28, 2008

Amateur Radio Newsline report number 1598 with a release date of Friday, March 28tht, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. Washington state invites it ham radio community to join the Amber Alert system, a ham radio satellite gets a workout in a rescue radio drill, CQ Magazine says Kosovo is an awards country and Pierre is here with a look at the future of hand held wireless communications. Find out the details on Amateur Radio Newsline(tm) report number 1598 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: WASHINGTON STATE INVITES HAMS TO JOIN AMBER ALERT SYSTEM

Hams in Washington state are officially invited to join that states Amber Alert public notification system. Burt Hicks, WB6MQV, reports:

--

According to a news report aired on Spokane television station KHQ, there are some 27,000 licensed radio Amateurs in Washington to whom the states Emergency Management System and State Patrol have jointly invited to take part in the Washington's Amber Alert program.

Representing the local Spokane ham community on the KHQ newscast was Jack Tiley, AD7FO. Tiley is the Spokane County ARES and RACES Assistant Emergency Coordinator. He indicated that the advantage ham radio it that it has people on the roads with two way radios in their vehicles. If they are aware of an Amber Alert, and then spot the fugitive car with a kidnap victim, that they can quickly call in the information to authorities. He also noted that hams have communications into areas of Spokane where cellphones simply do not work.

Washington State Trooper Jeff Seventhy appeared by telephone in the KHQ report. He said that the addition of the ham radio community to the program is truly welcome. He said that the main goal is to find kids who are missing as quickly as possible and that the more people out there helping, the better.

No mention was made as to whether any of the states ham radio repeaters plan to install decoders to permit direct relay of Amber Alert messages. Some hams in other states do not think doing so is legal, others

do but nobody has ever petitioned the FCC to get a definitive ruling. You

can see the entire KHQ report at http://tinyurl.com/28tpjc

For the Amateur Radio Newsline, I'm Burt Hicks, WB6MQV, in Los Angeles.

--

For those not aware, the nations Amber Alert System is named in honor of Amber Hagerman of Arlington, Texas. She was only 9 years old when she

was abducted on January 13, 1996. Four days later her body was found in a drainage ditch four miles from her home. Her kidnapping and murder still remain unsolved. (KMQ-TV)

**

RESCUE RADIO: HAMSAT USED IN HOSPITAL DRILL

Ham radio in space became rescue radio in space. This, when Shands hospital in Gainesville, Florida conducted a simulated emergency communications drill on Wednesday, March 12.

Students and faculty with the Gator Amateur Radio Club at the University of

Florida participated. The University of Florida Dental School club station, W4DFU, used their satellite ground station to distribute an e-mail

test message though the GO-32 amateur radio satellite. This provided proof

of concept in a disaster scenario to augment Amateur Radio voice communication if all telephone and internet services were down.

Keeping patient privacy laws in mind the ham radio operators could not transmit sensitive personal or health related data. However, in support of

the larger disaster scenario the ham radio satellite e-mail concept could be useful for getting list of supplies, reporting hazardous situations, and

status reports.

**

HAM RADIO IN SPACE: CUBESAT PROPOSES D-STAR OPERATIONS ONLY

D-Star may soon be heading into space. This as a new European Amateur Radio CubeSat project is proposing to using the D-STAR digital-communication protocol for all aspects of its operations.

Called OUFTI-1, the bird will be built by students at the University of Liege in Belgium. Its purpose is to provide hands-on experience to students in the design, construction, and control of complete satellite systems. One that will ultimately serve as the basis for a variety of space experiments.

The most innovative feature of OUFTI-1 will be the use of the Japan Amateur Radio League-developed D-Star digital-communication protocol. D-Star would be used as a means of satellite control and telemetry, as well as for relay communications for hams operators worldwide.

Future plans call for D-Star to be used to command on-orbit experiments as well. More on this exciting development is on-line at http://www.leodium.ulg.ac.be/cmsms/   (OUFTI-1 release)

**

RESCUE RADIO: HAMS RESPOND TO GEORGIA TORNADOES

Meantime, ham radio was on scene when tornadoes swept through Georgia on Friday, March 14th.   At 9:38 PM Eastern time an F-2 tornado touched down in downtown Atlanta. The National Weather Service said the twister was 6 miles long and 200 yards wide. An F-2 tornado has wind speeds from 111 to 135 miles per hour and the ability to tear roofs off houses, completely destroy mobile homes and snap apart tress as if they were toothpicks.

And as seen in T-V coverage the damage was extensive. Eyewitness accounts said that huge hunks of metal and broken glass were everywhere in Atlanta and that the Olympic Centennial Park was a mess. The high winds caused major damage to several other landmarks including the Georgia World Congress Center. Grady Memorial Hospital, the major trauma center for the Atlanta metro area, had its 100 foot tall communications tower blown off the hospital roof, disabling communications with emergency medical personnel.

According to the ARRL Letter, soon after the twister hit, hams sprang into action. According to ARRL Georgia Section Manager Susan Swiderski, AF4FO, William Chandler, KG4JTK, went from house to house in the wind and the rain checking for any injuries in the homes that had sustained damage by falling trees and debris. At the same time, he issued reports via radio to Barry Kanne, W4TGA, the Emergency Coordinator for neighboring DeKalb County regarding fallen trees, billboards, power lines and other threats to public safety. Kanne relayed this information to the Atlanta 911 center and to the Grady Hospital Emergency Operations Center.

In Effingham County, near Savannah on Georgia's coastline a tornado took down six power towers during the annual St Patrick's Day celebrations, and thrusting the community into total blackout conditions. A local 2 meter SKYWARN net, with Greg Tillman, N4VAD, serving as net control, provided a vital link for the staff at Memorial University Medical Center in Savannah.

And there has already been words of praise for the volunteer work performed by Georgia's ham radio community. Dr Ra Meguiar, N4RVM, a physician and senior hospital administrator, sent a letter of appreciation in recognition. He thanked the local hams for staying with us through the weather and the power outage. (ARRL, others)

**

RESCUE RADIO: PHILADELPHIA NWS TO OFFER SKYWARN TRAINING

If you live in and around Philadelphia Pennsylvania or Southern New Jersey and want to become a SKYWARN trained operator, listen up. The National Weather Service, in conjunction with the Skywarn Program of the Camden County Office of Emergency Management, will conduct the Basic Skywarn training program on Wednesday, April 9th. The venue is the Camden County Boathouse in Pennsauken with the class beginning at 7:00 pm Eastern time. To reserve a pace please pre register by calling 1-866-CAMDEN COUNTY. That's 1-866-226-3362. More information on the overall SKYWARN program is on-line at www.nws.noaa.gov/skywarn/ (N2PHI via QRZ.com)

WITH NEWSLINE: SPEAKERS NEEDED FOR HAM RADIO TOWN MEETING

If you are planning to attend the 2008 Dayton Hamvention and would like to be a speaker at one of the major sessions, then listen up. Have we got a deal for you.

Each year, we at the Amateur Radio Newsline host an open discussion forum called the Ham Radio Town Meeting. Its where we take a topic of interest, bring in some experts and then open it up for discussion with the live studio audience. In years past we have covered such controversial topics as no code licensing, and the digitalization of ham radio to mention only a few. But this year, we have decided to make it a truly fun two hours by taking a trip back in time to what some might call a kinder and gentler ham radio.

This years topic is titled "Grandpa's Ham Radio - The Magic of Yesteryear." It will take a look back at the hobby over the past half-century to see where it was in the latter 1950's through the mid 1980's. We have already assembled some top names in ham radio whose career go back into the latter half of the 20th century, but we still have a few spots open that need to be filled. First we need someone who remembers what it was like to take a Novice or Technician test by mail and then face the local FCC office to upgrade to General or higher. We also need someone who can talkk on the old days of emergency communications before the advent of F-M and repeaters. Last but by no means least, we are looking for a female ham who was first licensed as a teen or pre-teen in the early 1960's who can talk about what it was like to be one of the few gals in what was then a make dominated hobby.

If you are planning to be at Hamvention 2008, and would like to have a bit of fun talking for about 10 minutes on any of these topics, please send us an e-mail to newsline@arnewsline.org with the name of the topic, your contact information including a phone number and a short bio. We will get back to you very quickly.

Again that e-mail address is newsline@arnewsline.org And whether you are a participant or an audience member we hope to see you at the Ham Radio Town Meting at Hamvention 2008. (ARNewsline(tm))

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W1JLI Memorial repeater serving Norwood, Massachusetts.

(5 sec pause here)

**

RADIO AWARDS: CQ TO ACCEPT KOSOVO FOR ITS AWARDS PROGRAMS

CQ says that Kosovo is a country and effective immediately it is being added to the list of countries and territories recognized for CQ DX awards. Amateur Radio Newsline's Don Carlson, KQ6FM, has more:

--

Kosovo's status has been the subject of some controversy in the amateur radio community as well as the world community. Ham radio wise, the ARRL recently declared that the special operations from there on February 17 will count as Serbia, not Kosovo, in terms of DXCC credit. The League says

it is waiting for Kosovo to become a member state of the United Nations or

be issued a callsign block by the International Telecommunications Union before taking any action to recognize it as a separate DXCC entity.

While CQ the magazine's editor says that because it is their policy to grant credit for contacts with 'new' entities as of the date that their status changes, it has decided not to wait for U.N. action. Instead it will follow the lead of the United States and other countries that have recognized Kosovo's independence. Therefore it will grant credit for contacts made with stations in Kosovo as of its independence day. That date was February 17, 2008. Its also good news for those radio amateurs who have made contact with stations in Kosovo and are anxious to have it recognized as a new nation by all.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

--

In a related development, on March 26th it was announced that the Worked All Europe award committee of the Deutsche Amateur Radio Club had voted to

add Kosovo to the W-A-E country list. The CQ World Wide DX Contests and the CQ DX Marathon both use a combination of the DXCC and WAE lists as the

basis for their country lists. Therefore, Kosovo will now be considered a separate entity for both the CQ DX Marathon held this past February 17th and for the upcoming CQ World Wide DX Contests, beginning with the RTTY DX

Contest this coming September 27th and 28th. (CQ)

BREAKING DX NEWS: ZS6GCM ON HIS WAY TO MARION ISLAND

Some breaking news from the world of D0X. Petrus Kritzinger, ZS6GCM says that he will be active from Marion Island within the next month or so.   Definitely by mid-May.

Hardly having touched soil in South Africa after his trip to Bouvet, Kritzinger is already on his way to Marion and will be operating as

ZS8T. ZS6GCM says that he will be active on 160, 80, 40, 30, 20, 17, 12 and 10 meters using SSB, CW and RTTY. He expects to start operation in May 2008 depending on his work load on the island.

Further information on Krizinger's D-X exploits is on-line at www.sarl.org.za. We will have more D-X news at the end of this weeks newscast. (OPDX)

**

ENFORCEMENT: FCC PROPOES $7000 FINE FOR NON CERTIFIED CB GEAR

The FCC has proposed a $7000 fine against CB Shop & More, LLLP of Loveland, Colorado. This for willful and repeated violations of of the Communications Act and the Commission's Rules by offering for sale non certified transceivers capable of operation in the 11 meter Citizens Radio service.

The story is an all to familiar one. A retailer caught by the FCC selling what it claims to be 10 meter ham radio gear but which the FCC says is easy to make work on 11 meters. In this case it was transceivers carrying the Connex and Galaxy brand name labels.

CB Shop was specifically cited on a Galaxy transceiver. The FCC says that the unit is really C-B sets disguised as ham gear in order to skirt their rules. CB Shop argues that the gear at issue and does not require Commission approval because it is not a CB transceiver. The company has hired a lawyer who already responded to the FCC's initial notice in this case. Chances are that this one could eventually wind up being adjudicated in the federal courts. (FCC)

**

RADIO LAW: MOTOROLA KOREA FINED FOR FAIR TRADE VIOLATIONS

The subsidiary of one of the worlds largest telecommunications equipment providers has some legal issues overseas. Fred Vobbe, W8 HDU, has the details:

--

South Korea's Fair Trade Commission has levied a fine of 696 million won, or $729,000, on Motorola Korea Inc.. This, for allegedly helping three South Korean companies collude to get orders from government agencies.

Leenos Corp. and two other South Korean companies were fined a combined 282 million won or $295,000 for their part in conspiring to coordinate their bidding prices for the supply of mobile telecommunications devices to state police agencies, the antitrust agency said in a statement.

The three companies worked as sales agents for Motorola's trunked radio system, sold in the South Korean market. Motorola Korea, the South Korean unit of U.S. electronics manufacturer Motorola Inc. as might be expected, it criticized the Fair Trade Commission ruling.

--

No word whether any of the companies involved plan to appeal. (BN)

**

RADIO LAW: FCC SAYS NO APPARTMENT HOUSE CABLE EXCLUSIVITY

A divided panel of the U.S. Court of Appeals for the D.C. Circuit has refused to bar the Federal Communications Commission from enforcing rules that abolish exclusive contracts between cable companies and apartment building owners.

The request for stay, rejected in a February 28th order, was sought by the National Cable and Telecommunications Association. The N-C-T-A wanted a stay pending appeal insofar as the FCC's rules voided existing contracts to serve multiple dwelling units. Without issuing an opinion, the panel voted 2-1 to deny NCTA's request, stating that the trade group failed to satisfy the stringent standards governing requests for such relief. (BD)

**

EMERGING TECHNOLOGY: THE DTV TRANSITION - AN UPDATE

In less than a year most of the nations analog television transmitters will fall silent by government decree. And, if you want to keep watching your favorite shows, and are not subscribed to either cable or satellite, you will need a set top converter. Up till now these units have been scarcer than hens teeth and almost so expensive that you might think they were made of gold. But that too is changing as Uncle Sam puts your tax money where his mouth is to subsidize the purchase of these units. Jack Parker, W8ISH, is in Indianapolis, with more:

--

Come February 2009 your analog TV may be useless. On that day TV stations across America will turn off their analog transmitters and broadcast only in digital. Viewers who get their television over the air from a roof mounted antenna or rabbit ears will turn on their sets and see nothing but snow. That is, unless you have received a government issued coupon or bought a converter box on your own.

Each home may get two forty-dollar coupons to purchase an analog to digital converter box giving your old TV set a new lease on life. Most big box electronic stores now carry the converter box as well as new High Definition TV's. As of Christmas 2007, most stores no longer carry analog TV's.

While the move to high def will make your sitcoms look better and sound better, the Environmental Protection Agency has cause for concern. Discarded analog TV's contain about five pounds of lead. They fear that could cause widespread contamination of America's landfills.

So, if you have a cable TV or satellite TV converter box then you are already ahead of the game. Like old ham radios, you can sit back and enjoy what you have while the broadcast television industry gets ready for its February 2009 analog to digital transition.

Reporting for Amateur Radio Newsline, this is Jack Parker W8ISH.

--

So what now? Well if you watch TV with an antenna on your roof or rabbit ears on your set, now is the time to get you set top converter boxes coupons. The coupons will became available this past January 1, 2008 and you can get them through March 31, 2009. All households that own a TV using over-the-air analog reception are eligible. A link to the needed application is on line at www.dtv.gov (W8ISH from FCC information)

NAMES IN THE NEWS: VO1VZ NEW LABRADOR SM

Some names in the news. First up is Charles Marsh, VO1VZ, who has been elected Radio Amateurs of Canada Section Manager for Newfoundland and Labrador. Marsh ran unopposed, thereby eliminating the need for a balloted election. He begins a two-year term on July 1, 2008. (RAC)

**

RADIO HAPPENINGS: WHAT GOES UP MAY NOT STAY UP

The saga of the KFI AM radio tower rebuild in Los Angeles continues. This after the installation of the stations new antenna structure grinds to a halt as the structure crumbles to the ground.

The story goes this way. Back on December 19, 2004 the main tower for KFI A-M on 640 kHz, was hit by a private plane. The entire tower came crashing to the ground, folding into pieces but for the most part missing the buildings around the tower base. About 2 weeks ago, construction of the replacement tower finally got underway. But on Tuesday, March 18th, as the new tower had almost reached the 300 foot mark when it suddenly collapsed.

According to eye witness Dino Darling, K6RIX, afternoon around 2:00PM. Darling says that two levels of guy wires were in place. The third set of guys were slowly being brought into place, when the failure occurred.

Thankfully, nobody was on the tower during this phase of the installation.

Only one person was hurt when the North East guy structure gave way. There was some minor damage to a couple of trailers and the top 8' of the gin pole came through a warehouse roof.

Darling says that the third level guys were slacked at the time of the failure. Right now it looks as if the KFI tower installation is kind of back to square one. (K6RIX)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: RETIRED NEWSMAN ROBERT DYK, NW1A, SK

The changing of the guards in Amateur Radio continues. This with word that former ABC network correspondent and longtime Maine broadcaster Robert

Dyk, NW1A, died of cancer at his Falmouth home on March 22nd.

Dyk, who had a background in radio and television, was an anchor and reporter for WMTW from 1987 to 2004. He began his professional career as a

page at CBS television in Los Angeles and transferred to CBS News as an editorial assistant during the network's coverage of the 1960 Democratic

convention, working with broadcast luminaries such as Edward R. Murrow, Walter Cronkite and Don Hewitt.

Among the highlights of his career was being the only American network correspondent on the scene in Tehran in 1979 for the first four days of the

Iranian hostage crisis, when radical students stormed the U.S. embassy in support of Iran's revolution and held 52 Americans hostage for 444 days.

He came out of retirement last year to work as a part-time anchor-reporter

for WGAN and was working as recently as last month. Robert Dyk, NW1A, was 71. (KT1B)

**

THE CHANGING OF THE GUARD: NEWSLINE REPORTER MICHAEL CORBIN, K0ACL - S.K.

And we are very sad to report the passing of one of the newest members of the Newsline family. Michael Corbin K0ACL, who had done reports for Newsline died of complications following a stroke on Wednesday, March 19th,

Michael Corbin, lived in Denver, Colorado, and was host of the nationally-syndicated talk radio program called A Closer Look.. He had become a member of the ham radio community in March of 2006. He had only joined the Amateur Radio Newline team earlier this year after volunteering

to cover ham radio happenings in the United States Mountain time zone area.

According to one report Michael suffered a massive stroke and was found in

his car at the side of a Denver road by a passer-by on Tuesday March 18th. He passed away the following day. Michael Corbin, K0ACL, was only age 52. (WY0X)

**

HAM RADIO FROM SPACE: SOLAR ACTIVITY IS SURGING

Spaceweather dot com says that solar activity is surging. Three large sunspots have materialized and at least one of them holds the promise of energy for strong solar flares.

An M2-class eruption on March 25th hurled a coronal mass ejection or C-M-E

into space and emitted radio bursts audible in shortwave receivers on Earth.

Translated into information useful to ham radio operators this all means you can expect some interesting propagation or lack of propagation depending on the bands you frequent and the amount of solar activity that actually develops in the coming days. (Spaceweather)

**

EMERGING TECHNOLOGY: GIVE THE CUSTOMER A NEW TV SET

Sometimes even big business takes the easy way out. Witness the recent incident where it appears as if UK telecommunications giant British Telecom bought a customer a new TV set. Because of interference. No, not

interference to the customers television reception. Rather because of the

amount of interference to operations that the old one was causing to broadband users. It seems that a faulty power supply in the old television

receiver was disrupting broadband services for a 200 meter radius. (MM0KGB)

**

WORLDBEAT - AFRICA: NEW FOUR BEACON ON 70 MHZ FROM GUNIA BISSAU

The SV2DCD blog carries a report that J5FOUR is a new 70 MHz 4 meter beacon

is now operational from Guinea-Bissau. According to CT1FFU, the J5FOUR beacon came to life on March 10th using 20 watts out to a 4 element yagi designed by YU7EF specifically for this project. The antenna is beaming 20
�
to cover all Europe.

Formerly the Portuguese colony of Portuguese Guinea, Gunia Bissau is one of

the smallest nations in continental Africa. It is bordered by Senegal to the north, Guinea to the south and east, with the Atlantic Ocean to its west.

And its not at all surprising to hear that a new 70 MHz beacon has taken to

the air from Gunia Bissau. Interest in 4 meters seems to be spreading with

a growing world-wide with the number of countries granting their Amateurs some form of access to 70 MHz increasing every month. (Southgate)

**

ON THE AIR: NEW 2 METER SSB NET IN CALIFORNIA

On the air, if you live in California and operate on VHF, this is for you.

A newly created Santa Barbara Two Meter SSB Roundtable meets every Wednesday evening at 8:30 PM Pacific time on 144 point 210 MHz on Upper Sideband. The net is dedicated to developing interest in the use of SSB above 50 MHz. More information is available on-line at www.n6kth.com/vhf (Press release)

**

WORLDBEAT - POLAND: CELECRATING 75 YEARS OF THE SP DX CONTEST

The 2008 SP DX Contest takes place on April 7th and 8th. This year edition celebrates the 75th anniversary of the contest which was first organized in 1933. To celebrate the Polish Amateur Radio Union and SP DX Club are sponsoring a special Jubilee Award. Called the SP DX Contest - 75th Anniversary Award it is available free to all licensed operators and SWL's who meet specific criteria. Complete rules are on line at www.spdxcontest.info. (SP8AJK - SP75N)

**

DX

In D-X, HB9BEI and HB9AUZ will be at work in Liberia through the end of April. Expect activity only during their rare spare time. Listen ouut for HB9BEI will on CW and the digital modes. HB9AUZ works only CW. QWSL as directed on the air.

JD1BMM will be active from Minami Torishima on H-F working in CW/SSB/digital modes through about April 7th. QSL via the JARL bureau or to his address on QRZ.com.

F6BUM is going to activate several islands belonging to the Gulf of Tongking South Group through April 2nd. QSL via the bureau to F6BUM.

Also, word that the ARRL DXCC desk has approved two recent operations for DXCC credit These are the VP6DX DXpedition to Ducie Island and the TX5C DXpedition to Clipperton Island. Both were considred as highly uccessful operations in the world of D-X.

Lastly, this one looks like it could be the first ever no-code DXpedition. This as several operators from Belgian and members of South Africa's Radio Club Secunda activate as 7P8FC from Katse Dam in Lesotho. The operation runs from March 27th to April 3rd and they will use SSB only on 160 meters, SSB and RTTY on 80 metres and SSB, RTTY and PSK all other HF bands except 30 metes. They do not appear not to be using any CW. Further information can be obtained from www.7p8fc.be.

(Above from various DX newsletters and other ources)

THAT FINAL ITEM: NEW HT MAY COMBINE HAM RADIO - CELLPHONE - CB SET -- WAFFLE IRON AND MORE

And finally this week, cellular telephone technology has come a long, long

way since Motorola introduced its first lug along cellphone more than three

decades ago. Nowadays a cellphone not only fits in your pocket, but can also function as a camera, a music player and even provide Internet access

and e-mail on the go. When might some of this technology show up in our ham

rigs? Our April 1st roving reporter Pierre Pullinmyleg says that day may not be all that far away:

--

Eef you, like me, follow all of ze latest whistles and cowbells een technologee, zen you are most likely aware of ze new Sumsing Turbo 3000 XI

Multitasking cellular telephone recently seen demonstrated on zee YouToob.

Eef you have not seen eet, eet is not only a telephone, a camera and a museek player, but also a hair dryer, air pump, waffle iron and more.

I am pleased to announce excluseevelee here on Newsline zat in a unique technology-sharing agreement wis Sumsing, amateur radio manufacturer I-Ken-Ten-su-rola will soon introduce a multitasking handheld as well. Ze new unit will not only operate on all ham bands as well as C-B, F-R-S and MURS, but it also will include a talking GPS system zat will be able to tell you where to go -- and how to get zere -- in a dozen languages, as well as an S-W-R bridge, frequency counter, soldering iron, propane torch,

five-kilowatt amplifier, emergency power generator and seex-thousand candlepower spotlight.

Oh yes, it will also include a cell phone in case no one is listening when

you call for help on your local repeeeater. Ze new radio, from Sumsing and

Ken-Ten-su-rola, will sell for five dollars and ninety-five cents, and will

be called "Sumsing Else."

For ze Amateur Radio Newsline, zees ees Pierre Pullinmyleg reporting.

--

Until the "Sumsing Else" ham rig becomes available, you can see an actual demonstration of the amazing Turbo 3000 all purpose communications device on-line at www.youtube.com/watch?v=TYIOIM6hHBk

You may be amazed by what you see. Then again, maybe not.

And lest we forget -- a happy April Fools Day to one and all.

(Courtesy of the Annual April 1st Pierre Pullinmyleg Ever Roving Report News Service)

==> 2008 GLOBAL EMCOMM CONFERENCE TO BE HELD IN FRIEDRICHSHAFEN, GERMANY

The fourth annual Global Amateur Radio Emergency Communications (GAREC) Conference <http://www.iaru.org/emergency/GAREC2008Program.pdf> is scheduled for June 26-27, 2008 in Friedrichshafen, Germany, just prior to HamRadio 2008 <http://www.hamradio-friedrichshafen.de/html/en/>. That event, called "the Dayton of Europe," is scheduled for June 27-29. GAREC's schedule is continuously being updated and is subject to change.

Dr Hamadoun Toure, HB9EHT, Secretary General of the International Telecommunication Union (ITU), is scheduled to present the opening remarks at GAREC-08; Dr Toure received his Amateur Radio license in 2007. Ole Garpestad, LA2RR, President of IARU Region 1, is scheduled to participate in the opening remarks, too.

GAREC will take a look at the state of EmComm preparedness in each of the IARU regions, as well as discuss experiences of the 2006 and 2007 EmComm Parties-on-the-Air and the future of the Global Simulated Emergency Test (SET). Delegates will also discuss implementation of the WRC-03 modifications to Article 25 of the Radio Regulations, in respect to third-party traffic during emergencies and exercises. The part of Article 25 concerning Emergency Communications says "Amateur stations may be used for transmitting international communications on behalf of third parties only in case of emergencies or disaster relief. An administration may determine the applicability of this provision to amateur stations under its jurisdiction" (RR 25.3), and "Administrations are encouraged to take the necessary steps to allow amateur stations to prepare for and meet communication needs in support of disaster relief" (RR 25.9A).

GAREC delegates will also have the opportunity to look at and discuss the Memorandum of Understanding (MOU) between the International Amateur Radio Union (IARU) and the International Federation of Red Cross Red Crescent Societies (IFRC), as well as the MOU between the IARU and the ITU. IARU Vice President Tim Ellam, VE6SH, with assistance from IFRC Secretary General Markku Niskala and IARU International Coordinator for Emergency Communications Hans Zimmermann, HB9AQS/F5VKP, will lead the discussion. A representative from the ITU will also be on hand.

Each of the three IARU Region Presidents will speak on the status of EmComm in their respective region. Seppo Sisatto, OH1VR, and Juha Hulkko, OH8NC, will present on the possibility of Emergency Communication Centers around the world. There will also be a talk on D-STAR in emergency communications. Case studies of emergency communication practices will also be presented.

Those wishing to attend GAREC-08 are encouraged to register online <http://www.korkee.net/Garec2008/>. For those registering prior to June 12, the fee is 55 euros; after June 12, the fee is 75 euros. GAREC will take place in the Conference Center of the Friedrichshafen Messe in the Oesterreich Room. Travel and lodging information for GAREC and HamRadio 2008 is available online at the HamRadio 2008 Web page.

==> IDAHO AMATEURS ON HAND FOR SPECIAL OLYMPICS INVITATIONAL WINTER GAMES

More than 20 Amateur Radio operators wrapped up technical and operational support for the 2008 Special Olympics Invitational Winter Games in Boise, Tamarack and Sun Valley, Idaho the last week in February. Approximately 365 athletes from 10 countries competed in five sports -- Alpine Skiing, Cross-Country Skiing, Floor Hockey, Snowboarding and Snowshoeing. The Invitational Games were seen as the practice run for the 2009 Special Olympics World Winter Games to be held in Idaho February 6-13, 2009.

The Department of Defense provided Motorola VHF analog and P25 handheld radios and temporary repeaters to support the Games. Covering all of Southwestern Idaho, the ARES VHF repeater was instrumental in providing Games radio communications and critical communications for athlete transportation to and from Bogus Basin and Boise. Crossband links were used to coordinate and provide communications to the KX7ID Boise ARES repeater from the Tamarack Snowboarding venue near the Cascade/Donnelly area, about 100 miles north of Boise.

"It was a privilege to work with the Idaho State Police, Boise Police, Ada County Sheriff, Ada County EMS, Blaine County Sheriff and others within the Public Safety community," said Chuck Robertson, KX7ID, Technical Director for Games Radio Communications. "We are grateful for the relationships built during these test Games which will improve cooperation and teamwork as we work together toward support of the 2009 Games and public service initiatives beyond the Games."

The 147.380 MHz ARES repeater was the primary system used for the event, but the KX7ID UHF repeater, D-Star VHF simplex and P25 VHF simplex were also used. In addition, D-Star VHF low speed data using D*Chat <http://nj6n.com/dstar/dstar_chat.html> was tested from the Boise National Weather Service to Boise area hospitals.

"Communications are a vital component to any successful event, especially one as complex as the 2008 Special Olympics Invitational Winter Games and the upcoming 2009 Special Olympics World Winter Games, which are both multi-sport and multi-venue events with a lot of moving parts," said Kirk Miles, 2009 Special Olympics World Winter Games Chief Operating Officer. "We are grateful to all the Amateur Radio operators that have worked or will be working to make the 2009 Games a great success."

The 2009 Special Olympics World Winter Games <http://www.2009worldgames.org/> will be held in Idaho, February 6-13, 2009 and will include up to 3000 athletes from as many as 85 countries and 6000 volunteers. Competition will take place in seven winter sports -- Alpine Skiing, Cross-Country Skiing, Figure Skating, Floor Hockey, Snowboarding, Snowshoeing and Speed Skating. Competition and activities will be in communities and venues throughout Idaho, including Bogus Basin, Boise State University, Qwest Arena, Idaho Ice World, Sun Valley Resort and Tamarack Resort.

==> TEXAS TO HOST USA'S ARDF CHAMPIONSHIPS

Bastrop State Park in Central Texas will be the site for this year's USA championship of on-foot hidden transmitter hunting. Fans of this international sport -- also called foxhunting or Amateur Radio Direction Finding (ARDF) -- are making travel plans now.

Interest and participation in ARDF has been growing every year since stateside hams first competed at the World Championships in 1998. Beginning in 2001, there has been an annual national championship to see who is best at the sport and to select team members for the World Championships. The Texas ARDF group and the Houston Orienteering Club are combining to host this year's events, to be held the second weekend of May.

Thursday, May 8 is scheduled for arrival and equipment testing; 2 and 80 meter transmitters will also be on the air near the event headquarters. There will also be a get-acquainted meeting and drawing for the starting order. The 2 meter contest will take place Friday morning. Competitors will start in small groups made up of different age and gender categories, in the drawn order.

The 80 meter event will be early Saturday morning with starts in reverse order, highest numbers first. After everyone returns from the woods and the results are tallied, medals will be presented for first, second and third place in each category. There will be ample time for everyone to return home in time for Mother's Day activities.

On both bands, each of the five foxes transmits for 60 seconds at a time in numbered order on one frequency, and then the cycle repeats. Fox #1 continuously sends "MOE" in Morse code, then #2 sends "MOI," #3 sends "MOS" and so forth. Knowledge of Morse code isn't necessary, because the number of dits reveals which fox is on. Find your required foxes in any order and then head for the finish, following your map or the continuous beacon transmitter on a second frequency.

As always, the USA ARDF Championships are open to anyone of any age who can safely navigate the woods. A ham radio license is not required, so encourage your unlicensed-but-athletic friends and family members to join in. Each person competes as an individual; there is no teaming or person-to-person assistance allowed on the courses. Using GPS as a navigation aid is also forbidden.

The annual ARDF championships are an ideal opportunity to watch and learn from the best radio-orienteers in the country, as well as visitors from around the world. Previous USA championships have drawn experts from Australia, China, the Czech Republic, England, Germany, Hungary, Kazakhstan and Ukraine.

Registration for the 2008 USA championships is now open. A $70-per-person package includes the practice session, both competitions, Friday dinner and a T-shirt. Check out the Texas ARDF Web site <http://www.texasardf.org/> for detailed schedules, frequencies, lodging information and registration forms. An e-mail reflector <http://lists.texasardf.org/mailman/listinfo/texasardf> is available for Q&A, as well as for coordinating transportation and arranging equipment loans.

If you have never participated in an international-style transmitter hunt, you will find all the basics at ARRL Amateur Radio Direction Finding Coordinator Joe Moell's, K0OV, Web site <http://www.homingin.com/intlfox.html> including the rules and signal parameters. You will get equipment ideas for 2 meters and 80 meters. You can also determine your own age category. The pages of photos from our previous championships will help you decide what gear to carry (the lighter, the better) and what to wear. -- Information provided by ARRL ARDF Coordinator Joe Moell, K0OV

==> MICHIGAN AMATEURS TEAM UP WITH STATE

ARRL Michigan Section Manager Dale Williams, WA8EFK, and Michigan Section Emergency Coordinator John McDonough, WB8RCR, have been working with the Homeland Security Division of the Michigan State Police Emergency Management to align the capabilities of the Amateur Radio Public Service Corps (ARPSC) more closely with the communications needs of the state's public service agencies.

ARPSC -- Michigan's integrated ARES/RACES program -- also participates in the Michigan State Department Emergency Management Coordinators Quarterly meetings at the State Emergency Operating Center. It is here, Williams said, that discussion of the Public Safety communications grants are discussed and their investment justifications are detailed. "We have been afforded the opportunity to discuss Amateur Radio's involvement with communications interoperability, as well as our ability to fill gaps in disparate networks and outages. As a result of these conferences, I was asked to include a list of ARPSC's needs for the next three years."

To further that end, Williams told the ARRL that they have been successful in incorporating the ARPSC Program into the Michigan State Preparedness Priorities. Michigan intends to develop the ARPSC into a fully integrated communications team operating under common standards and procedures, including maintaining and enhancing the statewide Amateur Radio communications system; establishing suggested standards for Amateur Radio capabilities in local Emergency Operations Centers, and developing a public awareness and education program to bolster the ranks of Amateur Radio participants. The hope, Williams said, is to have all this implemented by 2010.

Williams said, "Since the early 1980s, Michigan has operated an integrated ARES, RACES and NTS program referred to as the Michigan Amateur Radio Public Service Corps. By combining the forces of these normally separate structures, these valuable resources are pulled together to form an active trained and unified organization. The Section Emergency Coordinator also holds the positions of Section Traffic Manager and RACES Radio Officer. Membership in ARPSC is open to all amateurs and is structured to allow a beginning ham to progress from an entry-level position to a RACES-qualified operator by meeting specific training milestones."

"There is no doubt that by presenting a unified organization, the Michigan ARPSC has demonstrated the effective use of resources, training and our unique capabilities so that we have become a well respected public service organization in the state," Williams said.

==> FCC SLAMS PENNSYLVANIA HAM WITH FORFEITURE ORDER

On March 6, the FCC announced that it has issued a "Forfeiture Order" <http://fjallfoss.fcc.gov/edocs_public/attachmatch/DA-08-498A1.pdf> in the amount of $4300 to Ronald Mondgock, KA3OMZ, of Honeybrook, Pennsylvania, "for willfully and repeatedly violating Section 301 of the "Communications Act of 1934, as amended" (Act), by operating radio transmitting equipment on the frequencies 439.850 MHz and 147.560 MHz without a license." Section 301 states a federal license is required to "operate any apparatus for the transmission of energy or communications or signals by radio." Mondgock's Amateur Radio license expired in December 2005.

Mondgock, who held a Novice class license, first received an "Advisory Notice" in February 2001 warning that he had been heard operating on the 75 meter band. He was told that he was not authorized to use that portion of the band and to review the Commission's rules relating to Amateur Radio Service frequencies.

In July 2004, Mondgock, received a "Citation" from the FCC's Philadelphia Field Office "related to failure to identify, transmissions involving obscenity and indecency and operating on a frequency not authorized for your Novice Class license." He was issued a "Warning Notice" in November 2004 for not replying to the "Citation" within the 20-day period. In the Warning Notice, Mondgock was warned by the Commission that if "a reply is not received by December 15, 2004, a 'Notice of Apparent Liability for Monetary Forfeiture' will be issued against you. We note also that your license expires December 14, 2005. No renewal or upgrade will be granted until this matter is resolved."

Also in July 2004, Mondgock received a letter from the FCC stating that the Commission "received an anonymous complaint alleging that several operators on the Amateur Radio Service frequency 146.55 MHz were using profane or obscene words or language and were failing to transmit their amateur license call signs. On June 2, 2004, between 7:30 p.m. and 8:45 p.m., an FCC agent with the Philadelphia Office investigated the complaint and monitored radio communications on the frequency 146.550 MHz allegedly between William Chapman (KB3IXS) and you. Based on your alleged radio communications that the FCC agent monitored, you may have violated the following FCC rules: Failing to transmit an amateur license call sign, in violation of Section 97.119(a) of the rules; Transmitting obscene and indecent words and language, in violation of Section 97.113(a) of the rules, and Operating on an unauthorized frequency, in violation of Section 97.301(e) of the rules. (A Novice class amateur licensee does not authorize operation on any frequency in the 2-meter Amateur Radio Service frequency band, 144-148 MHz, including 146.55 MHz." Mondgock was given 20 days to respond and told that his response "must address each alleged violation and include a statement of the specific actions taken to preclude a recurrence."

In February 2006, the Commission sent Mondgock a letter telling him that his application for renewal of his Amateur Radio license "cannot be routinely granted and has been referred to the Enforcement Bureau for review." He was advised that this was because he had never submitted responses to the Commission's correspondence or never claimed a letter sent via certified mail. Mondgock was given yet another 20 days to respond to this letter, and warned that if he chose not to do so that "your application for renewal will be dismissed and a 'Notice of Apparent Liability for Monetary Forfeiture' will be issued against you."

In December 2006, the FCC's Field Office in Philadelphia sent Mondgock another "Letter of Inquiry" to "follow up on a recent investigation, of the operation of your Amateur Radio Service station, on the frequencies 147.560 MHz and 439.850 MHz. in Philadelphia, Pennsylvania. As discussed more fully below, agents determined the operation of your Amateur Radio

Service station on the frequencies 147.560 MHz and 439.850 MHz violates Section 1.903(a) of the Rules and your operation on those frequencies must cease immediately. In addition, you are required to submit a detailed written response to the questions below regarding the operation of your station."

The FCC received information that Mondgock was operating radio transmitting equipment on the frequencies 147.560 MHz and 439.850 MHz. In response, the Philadelphia Field Office conducted an investigation between August-October 2006. "An agent used direction finding techniques to determine that you apparently operated radio transmitting equipment on the frequency 439.850 MHz from your residence on September 19, 2006, between 8:45 p.m. and 9:30 p.m. and from your vehicle on October 24, 2006, between 5:30 p.m. and 6:02 p.m. In addition, on September 12, 2006, the agent used direction finding techniques to determine that you apparently operated a repeater station on the frequency 147.560 MHz from One Commerce Square in Philadelphia, Pennsylvania."

The FCC asked Mondgock 11 detailed questions concerning his operations, directing him to "provide a complete explanation to the following questions and should provide copies of any relevant documents." He was told that his answers must be accompanied by a signed, sworn statement attesting to the truth and accuracy of the response. He was given 20 days to respond with answers to the questions and provide the sworn statement.

On August 15, 2007, the Commission's Philadelphia Field Office issued a "Notice of Apparent Liability for Forfeiture" (NAL) to Mondgock in the amount of $10,000 for operating radio transmitting equipment on the frequencies 439.850 MHz and 147.560 MHz without a license. Mondgock responded to the NAL and did not dispute the findings of the Commission, but requested a cancellation of the Forfeiture based on his inability to pay.

In examining Mondgock's response, Section 503(b) of the "Act" requires that the Commission take into account "the nature, circumstances, extent and gravity of the violation and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and other such matters as justice may require." When considering someone's inability to pay a fine, the FCC has determined that, in general, gross revenues are the best indicator of an ability to pay a forfeiture. The FCC examined Mondgock's financial documentation that he provided. The Commission declined to cancel the forfeiture but reduced the amount from the original $10,000 to $4300, based on Mondgock's demonstrated inability to pay the full forfeiture amount.

==> FCC FIXES TYPOGRAPHICAL ERRORS IN PART 97

On March 12, in an effort to correct typographical errors in the Commission's Rules (including rules affecting Part 97, the Amateur Radio Service), the FCC released a Memorandum Opinion and Order (MOO) <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-08-530A1.pdf>. According to the FCC, these changes in the MOO are "non-substantive editorial revisions" and do not introduce new rules or change old rules applicable to Amateur Radio operators.

In this MOO, the FCC is updating the Allocation Table and service rules for the Amateur Radio Service with regard to the band 75.5-81 GHz. In 2003, the Commission released a Report & Order (R&O) <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-248A1.pdf>, commonly called the "70/80/90 GHz R&O," that adopted a transition plan for the amateur use of the segment 75.5-76 GHz. The Commission concluded that moving Amateur Radio operations out of the 75.5-76 GHz band would not pose a major inconvenience to the Amateur Radio Service, but would "substantially benefit future fixed services, because it would eliminate the possibility of harmful interference from amateurs." Accordingly, the primary allocations to the Amateur and Amateur Satellite Services in the 75.5-76 GHz band were downgraded from primary to secondary status, with secondary use ceasing on January 1, 2006. After that date, the band 75.5-76 GHz was no longer available for use by the Amateur Service or the Amateur Satellite Service.

This transition plan was codified in footnote US387 and in Section 97.303(r)(3) of the Commission's Amateur Service rules. Because the transition period has concluded, the Commission "removed expired footnote US387 from the list of U.S. footnotes and we are amending Part 97 of the Commission's Rules to reflect this allocation change by: (1) revising the entry "75.5-81.0" GHz in Section 97.301(a) to read "76-81" GHz; (2) removing paragraphs (r)(2) and (r)(3) from Section 97.303; and (3) renumbering paragraph (r)(1) as paragraph (r)."

In October 2006, the FCC released another Report & Order (R&O) <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-06-149A1.pdf>, the "Amateur Phone Band Expansion R&O," that expanded the phone bands. With the release of the MOO, the FCC is making two changes.

The first change to the October 2006 R&O is simply a correction of a typographical error in the Rules for the General phone allocation on 15 meters. In the Amateur Phone Band Expansion R&O, the Commission revised 21.30-21.45 MHz to read 21.275-21.45 MHz, but the current codification of the rule does not reflect this change. All the Commission did was to bring the Rules into alignment with the R&O.

The second change fixed an omission in the Novice/Technician allocation on 40 meters. The FCC found that when the Amateur Phone Band Expansion R&O was released, "the Commission expanded the frequency segment authorized for amateur voice communications within the 40 meter band by correspondingly reducing a band segment used for narrowband emission types by 25 kHz, from 7.100-7.150 MHz to 7.100-7.125 MHz." The revised frequency table in Section 97.301(e) of the FCC's Rules that lists authorized frequency bands for Novice and Technician Class inadvertently omitted 7.100-7.125 MHz from Regions 1 and 3. "Because the Amateur Phone Band Expansion R&O addressed the division of amateur frequencies among permissible emission types and not between geographic ITU Regions, we must further amend Section 97.301(e), as set forth in Appendix C, to implement the Commission's decision. Specifically, we are revising the

40 meter band by reinserting the segment '7.100-7.125' MHz in the Region 1 and Region 3 columns."

The FCC also took the opportunity to remove a double negative from Section 97.303(b). Before the release of the MOO, this Section read: "No amateur station transmitting in the 1900-2000 kHz segment, the 70 cm band, the 33 cm band, the 23 cm band, the 13 cm band, the 9 cm band, the 5 cm band, the 3 cm band, the 24.05-24.25 GHz segment, the 76-77.5 GHz segment, the 78-81 GHz segment, the 136-141 GHz segment, and the 241-248 GHz segment SHALL NOT cause harmful interference to, nor is protected from interference due to the operation of, the Federal radiolocation service." The FCC chose to take out the word "NOT" to bring the rule's words in line with the spirit of the rule.

==>SOLAR UPDATE

Tad "Saw in the Sun a mighty angel stand" Cook, K7RA, this week reports: With just a few scattered sunspots in the past two weeks -- February 28-March 12 -- it isn't meaningful to ponder the change in weekly averages. There were just four days with sunspots during that time: February 28, March 5-6 and March 10. Sunspot numbers for March 6 through 12 were 12, 0, 0, 0, 12, 0 and 0 with a mean of 3.4. The 10.7 cm flux was 70.3, 70.5, 69.8, 69.5, 70.3, 70.2 and 69.4 with a mean of 70. Estimated planetary A indices were 2, 3, 11, 25, 18, 12 and 14 with a mean of 12.1. Estimated mid-latitude A indices were 2, 1, 6, 14, 12, 7 and 9 with a mean of 7.3. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the NCCC Sprint is March 14. The AGCW VHF/UHF Contest, Feld Hell Sprint and the 10-10 International Mobile Contest are on March 15. The Russian DX Contest is March 15-16 and the Virginia QSO Party is March 15-17. The UBA Spring Contest (6 meters) and the 9K 15 Meter Contest are both March 16. On March 17, look for the Run for the Bacon QRP Contest and the Bucharest Contest. The NAQCC Straight Key/Bug Sprint and the RSGB 80 Meter Club Championship (SSB) are scheduled for March 20. Next weekend is the ARLHS Annual Spring Lites QSO Party from March 21-30. Another running of the NCCC Sprint is March 21. The BARTG Spring RTTY Contest is March 22-24. The UBA Spring Contest (2 Meters) is March 23 and the SKCC Sprint is March 26. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains

open through Sunday, March 23, 2008, for these online course sessions beginning on Friday, April 4, 2008: Technician License Course (EC-010); Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL to Close in Observance of Good Friday: ARRL Headquarters will be closed in observance of Good Friday on March 21. There will be no W1AW bulletin or code practice transmissions that day. "The ARRL Letter" will be posted a day early on Thursday, March 20; there will be no "ARRL Audio News" that week. ARRL Headquarters will reopen Monday, March 24 at 8 AM Eastern Daylight Time. We wish everyone a safe and enjoyable holiday weekend.

* KH6 Incoming QSL Bureau Address Change: As of April 1, 2008, Barbara Darling, NH7FY, will assume management of the Hawaiian KH6 Incoming QSL Bureau. All card shipments should now be sent to KH6 QSL Bureau, Big Island ARC, Attn: Barbara Darling, NH7FY, PO Box 1938, Hilo, HI 96721-1938. Any concerns regarding this bureau's operation should be directed via e-mail to Barbara Darling, NH7FY <nh7fy@yahoo.com>. The ARRL would like to thank former KH6 Incoming QSL Manager Wayne Jones, NH6K, for his years of service.

* "Spirit of Knoxville" Sees Successful Launch: The trans-Atlantic balloon flight of the "Spirit of Knoxville IV" <http://www.spiritofknoxville.com/> launched into orbit on March 11 at 0200 UTC (10 PM EDT March 10). The balloon, designed to stay aloft for more than 24 hours, was successfully inserted into the current jet stream at normal flight altitudes of 30,000-40,000 feet. On Wednesday, March 12, it had made two-thirds of its journey and crossed the tectonic plate to Europe. Organizers hoped the balloon would make to Europe, but after 40 hours and 3300 miles, the balloon lost altitude late Wednesday and went into the ocean as it neared Ireland. Using radio frequencies, the balloon transmitted data detailing its current location, distance traveled, speed, height and health of the balloon. The balloon's payload consisted of hand-made computers and radios, along with a GPS and self-authored software. The onboard computer gathered such information from the GPS as altitude, speed and temperature; the computer then determined whether the balloon needed to drop weight to maintain its

altitude and sent this information, via Amateur Radio frequencies, to volunteers around the globe.

* Exhibit Kits Now Available for Field Day: Please visit our Field Day information page <http://www.arr.org/fieldday> for all the details on Field Day rules, frequencies, forms, pins, logos and T shirts. The complete Field Day packet can be downloaded from the site as well. If you have unanswered questions about Field Day, contact ARRL Field Day Manager Dan Henderson, N1ND, via e-mail <fcinfo@arrl.org> or by phone at 860-594-0236. If you want to order exhibit kits containing printed flyers about Amateur Radio, you may order these materials <http://www.arrl.org/brochures/> on the ARRL Web site. The cost of the exhibit kits ranges from $8-$12 depending on shipping. To make sure you'll have the display material in time for Field Day, your order must be received before June 13.

* Amateur Radio Exempt from California's New "Hands Free" Law: On July 1, the State of California will have new laws on the books to deal with the use of wireless telephones while driving. There has been some confusion as to whether California amateurs who operate in their car will be affected by the new law. According to the California Department of Motor Vehicle's Web site <http://www.dmv.ca.gov/cellularphonelaws/dl208_03cell_phone.pdf>, "the use of dedicated two-way radios such as walkie-talkies or Citizen Band (CB) radios is not affected by the new law" for drivers 18 or older.

* Notes from the DXCC Desk: ARRL DXCC Manager Bill Moore, NC1L, reports that the 2007 ZL1GO/8 DXpedition to Kermadec Island has been approved for DXCC credit. "If you had cards rejected for this operation, please send an e-mail <dxcc@arrl.org> to the ARRL DXCC Desk to have your DXCC record updated," Moore said.

* Snake Update: E-mails to name the W1HQ snake <http://www.arrl.org/news/stories/2008/02/21/100/> keep coming in to ARRL HQ. According to ARRL News Editor S. Khrystyne Keane, K1SFA, more 600 names have been submitted. "I am sorting through the names and soon the W1HQ team will go through all of them and choose the name for our mascot."

==

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

This may be the case in the UK - I'm not up to speed on that, though -
but as far as US-registered aircraft is concerned, non-aviation radio
equipment, such as amateur radio, common-carrier radio, private mobile
("two-way") radio, and broadcast auxiliary radio is installed and
operated routinely by persons other than the aircraft commander, as
long as the station is authorized either by specific license or by
blanket authorization.

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup for amateur radio operators and other people having an interest in the Amateur Radio Service, as defined by national regulations and international treaties. Following are the posting guidelines for this newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
    2.1 Netiquette guidelines
    2.2 Posting form requirements
    2.3 Guidelines on signature (.sig) files
    2.4 Guidelines on excessive quoting
    2.5 Guidelines on pointers to outside sources
    2.6 Guidelines regarding questioning someone's suitability to hold an amateur radio license
    2.7 Guidelines regarding name-calling
    2.8 Guidelines regarding civility
    2.9 Other unacceptable topics

---

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur radio operators and other people having an interest in the Amateur Radio Service. Participants are invited to engage in open discussion of amateur radio issues and exchange information about participating in the hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions and discussions about amateur radio licensing, regulations, tips on various aspects of setting up an amateur radio station, and sharing operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade posts, posts that are off-topic to the Amateur Radio Service, posts promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:

- Welcome to Usenet!
- Rules for posting to Usenet
- Hints on writing style for Usenet
- A Primer on How to Work With the Usenet Community
- Emily Postnews Answers Your Questions on Netiquette
- Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html |

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in

reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

Except for the reuse of possibly-contaminated 55-gal drums it all sounds good.

The dial drum of the Southgate Type 7 was made from a piece of 6" diameter plexiglass pipe. It was thoroughly cleaned and about a 2" long section cut off. A disk 6" in diameter was then cut and the pipe solvent-welded to the disk using Duco.

The neutralizing-adjustment disk from a BC-375 tuning unit was then bolted to the bottom so that the dial drum could be mounted on an extension of the tuning capacitor shaft.

The dial drum is viewed through a Plexiglas window. A piece of paper wrapped around the drum was calibrated using an LM frequency meter, then a good copy drawn using a CAD program. The good copy was printed on translucent Mylar and put on the drum.

A lampholder/reflector assembly is mounted inside the dial drum, with two pilot lights so the whole thing is illuminated.

Indeed! I will speak with Engineering Documentation about it.

There's a good discussion over on eham about high power tubes,
gettering and other issues. Unlike receiving tubes with their shiny
flashed getters, high power tubes often use the anode or a coating as
the getter, and need to operate at high temperature to work.

Lots of good info out there free for the download. W5JGV's site has
info from Eimac, RCA, Taylor and other tube makers. Not just the usual
number and data but application notes, recommended practices, etc.

Don't want fancy. Want functional.

Thursday there was the remains of a packing box for some new furniture
by a dumpster near here. The box was corrugated but the base was nice
2x4 and 1x6, nailed together. Cut off the corrugated and saved the
wood.

Yep, you're right. Particularly around here!

>� I can appreciate antiques as art but we don't

Same here. All about multiple uses.

For me that frame is overkill but the hollow-core door is underkill -
not strong enough.

> Did I mention the six foot rack to my right?

I've had table racks but always wanted a six or seven foot floor rack.
My old Handbook has plans for a wooden one...

> > I did one table with a hollow core door many years ago (it was

Yes but that's not the issue. You can punch right through the surface
with something sharp and heavy enough.

>
> Mine will break down too, but I don't think it'll fit in a Rabbit. :-)

Less than 10 minutes to set up or take down, no tools needed. It's all
about multiple uses. No card-tables on FD for me.

Yeah, I've thought about it a great deal. Some of those drums may have
had petroleum products or pesticides or such. You might want to think
about getting your beef in a black trash bag which was previously used

for garbage. I once bought a loaf of French bread on the street which came wrapped in a letter I'd discarded in the trash. It didn't bother me too much since I'd already gotten used to picking the baked weevils out of the bread.

> The dial drum of the Southgate Type 7 was made from a piece of 6" diameter plexiglass pipe. It was thoroughly cleaned and about a 2" long section cut off. A disk 6" in diameter was then cut and the pipe solvent-welded to the disk using Duco.

>
> The dial drum is viewed through a Plexiglas window. A piece of paper wrapped around the drum was calibrated using an LM frequency meter, then a good copy drawn using a CAD program. The good copy was printed on translucent Mylar and put on the drum.

That's a pretty inventive way to handle a homebrew dial.

> A lampholder/reflector assembly is mounted inside the dial drum, with two pilot lights so the whole thing is illuminated.

It sounds remarkably like the way Hammarlund handled the dial/illumination in the HQ-215.

>
> There's a good discussion over on eham about high power tubes, gettering and other issues. Unlike receiving tubes with their shiny flashed getters, high power tubes often use the anode or a coating as the getter, and need to operate at high temperature to work.

I've read the eham thread and have even participated.

> Lots of good info out there free for the download. W5JGV's site has info from Eimac, RCA, Taylor and other tube makers. Not just the usual number and data but application notes, recommended practices, etc.

I'm forced to admit that I've got many of the original transmitting and receiving guides. When I sold industrial electronics for Hughes-Peters, I rescued an old Eimac three-ring binder from the trash. It contains the specs for most early and late Eimac bottles along with applications notes and design info for amateur amplifiers. Quite a number of those notes and articles were done by Bill Orr W6SAI (SK). I consider Bill's articles to be excellent.

I can't tell you how many leftovers I have from buying material for a project. When I lived in Cincy, I used to hit the scrap bins of a plastics distributor so I have quite a bit of scrap teflon, nylon and lucite rod, sheet and tube. Finding it when I want it is the hard part.

I'm not above that. My last crank up tower from Tashjian/Tri-Ex had a crate built from 22-foot-long California 2x4's and some long, narrow strips of plywood. I kept it all. I'd never even seen 22' pieces of 2x4 stock prior to getting these. They're reddish in color and are of some sort of pine not often found here in the East.

Well, these 3,000 to 5000 square foot mega-homes have been cropping up
everywhere in the past decade. They're much cheaper to heat and cool
than some of the earlier built homes.

>
> Yes but that's not the issue. You can punch right through the surface
> with something sharp and heavy enough.

That's why I mentioned the console. Everything heavy sits on it. The
four supports for it distribute the weight so that nothing can break

through the door. There's one large HF rig, one HF/VHF/UHF rig, four rotor control boxes, an HF amp, three remote coaxial switches, three watt meters, two speakers, an antenna tune, a RTTY/digital modem, spare receiver and a monitor scope on the console. Assorted accessory boxes sit under the console and there's an LCD computer monitor and a keyboard on the desk too.

TNX. Not a single new part was used. It's done a good job these past
dozen years.
```

> It sounds remarkably like the way Hammarlund handled the

That's what inspired the design, except there's no dial cord in the Type 7. IIRC, the HQ-215 lamps aren't *inside* the dial drum, are they?

> I received the data from Engineering.

Good. Ms. Yardley sends greetings.

Priceless stuff!

> Quite a number of those
> notes and articles were done by Bill Orr W6SAI (SK).
>� I consider Bill's
> articles to be excellent.

I agree. Those articles and notes often go far beyond mere specifications and general data, too. They often explain *why* something is done, not just what to do.

A lot of the info is rather subtle. For example, if one is used to receiving and low-power transmitting tubes with their silvery flashed getters, where overheating causes the getter to lose its silvery appearance, it is counter-intuitive that the gettering action of high power transmitting tubes can actually depend the plate reaching high temperatures. Or that, in the case of high-gain glass tetrodes like the 4-125A, running lightly loaded can cause the glass of the tube to soften from electron bombardment.

I think that a lot of things were tossed in the 1970s-1990s because folks thought they'd never be needed again. Can't tell you how many tubes and tube-related parts I acquired in those years for little or nothing, because the folks getting rid of it thought nobody would ever need or want it in the future.

This sort of thing even happens in the aerospace industry. A lot of documentation was simply dumped as programs ended. Rocket engine designers are going to museums to see how it was done in the past, and have the problem of seeing what was done but not why.

Same here.

How's this for scrounging:

When this house got new siding back a few years, the antenna mast had to come down so the siding could be put on. But when the mast was to be reinstalled, I needed some spacers to make everything line up correctly.

Machining metal to do the job would have been a big deal. Wood was easy but would be a maintenance job, exposed to the weather. PVC was too soft and not available in the right sizes anyway.

Then I remembered that relatives had redone their kitchen some years earlier, and had gotten white Corian countertops installed. The installers had left some Corian scraps behind. The relatives had kept them, figuring there had to be some use for such wonderful material.

Sure enough, the scraps were still available for the asking. I got some and made the exact spacer blocks needed. Tough, weatherproof, easy to machine, and even the right color.

> > Don't want fancy. Want functional.

The only places I've seen such long pieces of 2x4 were in old balloon-framed houses. One reason balloon-framing ended was the availability and cost of such wood.

> Well, these 3,000 to 5000 square foot mega-homes
> have been cropping up
> everywhere in the past decade.

We call them "McMansions" in these parts. But that really applies more to the 4,000-8.000+ sf houses we see.

It is not unusual around here to see a perfectly good house from the 1950s to 1970s bought and torn down by a developer so a McMansion can be built. The value is in the land - often the price of the new place is twice that of the old. The current housing bust has mostly put an end to that, but not completely. More than a few locals are up in arms because it means less "affordable" housing units.

The amateur radio connection to all of this is that often the house which was torn down had mature trees good for antennas and no CC&Rs. "Development" often removes at least some of the trees, or they don't survive the construction process, and the new place is usually CC&R'd to the max.

>� They're much cheaper to heat and cool
> than some of the earlier built homes.

That depends on two factors: scaling (as a house gets bigger, the interior volume grows faster than the exterior wall/roof area) and how houses are built.

When this house got the work done a couple summers ago, and some walls were opened, it turned out that there was no insulation. Just a thin layer of wallboard, 2x4s, 1x10 sheathing (not plywood yet the house is from 1950) tar paper and mineral siding. Of course insulation and Tyvek were installed, and then the new siding.

Beautiful, just beautiful..

One difference is that your console/desk is purpose-built for the shack. Custom use, IOW. The op desk I use was designed to be multi-purpose, and has been on several Field Days, as have the Southgate rigs.

When a thing is built to do just one thing, it can often be made simple and yet high-performance for that one thing. When it has to do multiple things, there are always more compromises.

Hello Phil, I was wondering if the Secrecy Clause was still a part of
the Communications Act of 1934, or if it had been rescinded or replaced
by some other Language in some later Act? Does it still apply to any FCC
Operator License Holder?

Heh. What's funny is that after you've lived in one of those places for a while, these things tend to seem perfectly rational. When the embassy water pump broke, we lived for six weeks with a string of locals hiking the five flights to our flat with a bucket full of water in each hand. They'd dump the buck in a plastic garbage can, turn around and trot down the stairs for another couple of buckets. We lived like that for six weeks--taking bucket baths, doing hand wash and so forth. Keep in mind that all water used for drinking/cooking had to be boiled and filtered before use, whether the pumps were in operation or not.

We had a pipe burst inside a wall of our laundry room once. There was no pipe available in town. Worker dug into the concrete wall, found the break and used rubber tubing and hose clamps to join the broken pieces. With every surge of the water pump, the tubing expanded and contracted, looking like it had a pulse. WAWA--West Africa Wins Again.

Yes, it is. There's only one inside the drum and another for the S-meter. To the left of the dial window is a calibration adjustment. To the right is an identical knob which dims the dial lamps if desired. I desire it a lot since dimming them a bit keeps from having to put in new lamps very often.

> something is done, not just what to do.

Exactly. I'd never realized until I got the binder that Eimac had even
published amateur linear amplifier "how to" articles. A linear amp
isn't a difficult thing to design yourself if you understand why a final
tank Q within a paricular range is desired and you can use tables
published by Orr for translating the plate load impedence of a
particular bottle (run at a particular plate voltage) to find the values
of C1, C2 and L needed for the tank circuit.

> A lot of the info is rather subtle. For example, if one is used to
> receiving and low-power transmitting tubes with their silvery flashed
> getters, where overheating causes the getter to lose its silvery

> power transmitting tubes can actually depend the plate reaching high
> temperatures.

It makes sense. There is a great difference between a receiving-type tube run at relatively low voltages and a high power transmitting tube run at high voltages. Their construction is quite different.

> Or that, in the case of high-gain glass tetrodes like the 4-125A, running lightly loaded can cause the glass of the tube to soften from electron bombardment.

That sort of thing was also evident in TV horizontal output tubes. As I pointed out in the e-ham forum, Nonex glass was used in some later sweep tubes to help in preventing suck-in.

> I think that a lot of things were tossed in the 1970s-1990s because folks thought they'd never be needed again. Can't tell you how many tubes and tube-related parts I acquired in those years for little or nothing, because the folks getting rid of it thought nobody would ever need or want it in the future.

I have enough boat anchor gear that I've taken about anything offered over the years. Having the parts to keep something running isn't the problem. Storage is.

> This sort of thing even happens in the aerospace industry. A lot of documentation was simply dumped as programs ended. Rocket engine designers are going to museums to see how it was done in the past, and have the problem of seeing what was done but not why.

I've read articles stating that NASA is having real problem as those with knowledge of the design of such engines are retiring or have already retired.

That's one I'd not considered. What I might have considered is that
newer composite decking material which is designed to last for decades.
  It can be cut easily and comes in a variety of color. I'd have likely
gone with something like that since nobody hereabouts has put in any
Corian counters lately.

> Sure enough, the scraps were still available for the asking. I got

I'm not familiar with the term "balloon framing". I'm looking it up. I
don't think there's anything available from my local lumberyard in
lengths exceeding 16'.

There are some of 'em in Wheeling, but not many. I think those homes were the product of a booming economy and easy credit. Those days are over for at least the time being.

> It is not unusual around here to see a perfectly good house from the
> 1950s to 1970s bought and torn down by a developer so a McMansion can

I can't really understand the "up in arms" part because we really having a surplus of existing housing in the country. The "tear it down and build a new one" stuff is going on in the Cincinnati area too.

> The amateur radio connection to all of this is that often the house
> which was torn down had mature trees good for antennas and no CC&Rs.
> "Development" often removes at least some of the trees, or they don't
> survive the construction process, and the new place is usually CC&R'd
> to the max.

That IS a problem for radio amateurs. I think a bigger problem is that most of our newer housing is built in subdivisions. Those subdivisions are not radio friendly at all. I'm seeing more and more magazine articles on stealth antennas. I won't consider living in one of those areas.

We're sitting on an acre. If we re-locate, I'd be happier with 2 or 3 acres. I wouldn't object if half of that area happened to be in trees or woods though.

>> � They're much cheaper to heat and cool
>> than some of the earlier built homes.
>
> That depends on two factors: scaling (as a house gets bigger, the
> interior volume grows faster than the exterior wall/roof area) and how
> houses are built.

The "how houses are built" part is what I meant to address. Things like a geothermal heating/cooling systems are another factor. W8RHM's new place has one and it is a large house. His heating and cooling bills are quite reasonable.

> When this house got the work done a couple summers ago, and some walls

> Tyvek were installed, and then the new siding.

That had to make a difference.

>
> Beautiful, just beautiful..

If not beautiful, at least it isn't ugly. The console and the former W8YX desk got hauled to each of my Foreign Service postings. The console is approaching thirty years in age. It gets a new coat of paint about once per decade.

> One difference is that your console/desk is purpose-built for the
> shack. Custom use, IOW. The op desk I use was designed to be multi-

N8NN and I have been using those plastic-topped banquet tables with the folding legs inside a screen room for FD use. That's because 1) they're easy to set up and take down and 2) Bert has some.

> When a thing is built to do just one thing, it can often be made
> simple and yet high-performance for that one thing. When it has to do
> multiple things, there are always more compromises.

It is really difficult to buy something which is really ideal for an amateur radio operating position. Computer hutches/desks tend to be a little on the small side and aren't generally as stoutly built as necessary. For some of us, what worked really well at one point might not be as handy years later, when the amount of gear expands to fill all available space. I used to get by with the old W8YX desk with a 3x5' top. The position I now use is 3x7'. If I relocate, I'll consider a homebrew U-shaped operating position. The room I'm in at present does not lend itself to that.

Dave K8MN

I am not an attorney or a specialist so I can't answer this directly. However, you might be able to find what you want at:
http://www.law.cornell.edu/uscode/18/usc_sup_01_18_10_I_20_119.html

The entire current communications act is available as a PDF from the FCC at:
www.fcc.gov/Reports/1934new.pdf

I think what you are asking about is the restriction on discolosing any private communication one might intercept. This never applied to amateur communication because it is not, per se, private. It would apply to any commercial communication you might overhear other than that clearly intended for public consumption such as broadcasting.

That is, if you can hear telephone conversations from a wireless phone or similar you may not disclose them to a third party.

I suspect that like all law there are all sorts of convoluted special conditions applying to this.

Hi All,
  Does anyone have any info, experience, opinions, etc. about the MFJ-998, 1500 watt Intellituner. I am thinking about ordering one for HF operations. BTW, (now I'm bragging) I recently got a mint condition Henry 3002 amp but I haven't installed the 240 V AC wall socket yet. Unless I put up another antenna I will not be able to run it at full output as my cushcraft 215wb is only rated for a KW.
73 all, Ace - WH2T

I was just wondering if that language was still part of the
Communications Act of 1934.  I am familiar with all it's ramifications,
as I have been a FCC Resident Field Agent, in the past.  Phil
was an FCC Lawyer in California, before he left the Commission,
and I know he will have more current knowledge, about this, than
I have.

The second link, the one to the FCC, has the complete text of the current act but does not have an index which makes it hard to look stuff up. I think it runs some 300 pages, if you know what section to look at you can see if the language is still there. The privacy act may also apply here and may provide protections not in the communications act. All this is complicated by the various homeland security acts which allow the government to do a lot of snooping, but that does not apply to individuals.

I am also anxious to have an opinion from a lawyer who specializes in communications law.

I am trying to convert "words per minute" into "bits per second." Bits per second, in turn, is APPROXIMATELY equal to baud, a common measure of modem (or other means of data transmission) speed. I need to quantify one factor: How many letters are in a "word?" If we assume that there are 5 (five) letters to a word, my calculations look like this:

```
WPM = 50
LPM = WPM * 5   # letters per minute
BPM = LPM * 8   # bits per minute
BPS = BPM / 60  # bits per second
BPS = 33.33
```

I have assumed 8 bits to the byte, which is quite generous considering that Morse cannot encode an 8 bit character set or, for that matter, the full ASCII character set, which is only 7 bit.

Can anyone see any obvious errors? Is 50 words per minute really equal to about 33 baud?

Here is how Morse speed is usually calculated:

If the text is typical plain-language English, the test word "PARIS" is used. WPM is the number of times PARIS can be sent in 1 minute, using proper spacing between dits and dahs, letters, and words.

It turns out that the word PARIS and one word space equals exactly 50 "dit times", with a dit time being the length of time the key is closed for a dit. (A dah is three dit times, the spaces between dits and dahs inside a character are one dit time, the spaces between letters are three dit times and the spaces between words are seven dit times.)

So if the word PARIS is sent 50 times in 1 minute, that minute is divided into 2500 dit times. Which is 41.66 bps.

The reason for the difference is that there are so many different timing issues in Morse Code. The elements, characters and spaces are all different lengths, with the most-common characters (like the letter E) being the shortest.

Somewhere in my pile of stuff I have Eimac's "Care and Feeding of Power Tetrodes". A classic.

Bill Eitel (SK), the "Ei" if Eimac, was a close buddy of my first FCC boss, Ney Landry (W6UDU, ex-K6RI - but that "ex" is another story) and I got to meet him several times in the office and at the hamfests that eventually became Pacificon.

The glue-lam framing industry uses them quite a bit, with a production line making all sorts of very long "timbers" from 2x4s and 2x6s held together by glue that is RF heat-sealed (13.6 MHz ISM stuff) and a flying-arm saw cutting them to length in a continuous process. I got to visit such a plant once, and marveled that everything worked as well as it did.

There are homes now being built near here advertised as "golf course homes starting in the mid-700s". I understand that most of them are a Mill or more, and were sold even before construction started. For some people there is no recession.....

Small shacks they are not - and I'll bet that there are CC&Rs against putting up ham antennas even by folks with that kind of dough.

A new mega-room mansion built near here by a developer for his own
family residence necessitated a much larger natural gas line to be put
into the neighborhood just to provide the heating of the place.

Every time I pass the place I envision where I could put up a 100 foot
tower with no real visual impact.

Jim,

I'm sure your explanation is correct, but it leaves me confused: I know bps <> baud, but they're close, and the Model 15 Teletype I used to own operated at 45 baud. It seems illogical that Morse would be so high in the bps count.

73, Bill

Comes here the Kane tutorial on Communications Privacy / Secrecy......
<ggg>

First - some definition. "Intercept" means to merely receive the contents of a communication, not necessarily the same meaning as to "intercept a forward pass" in football. "Divulge" means to pass the contents in whole or in part or in meaning to an other person not authorized by law to receive such contents. "Personal use" means "use for personal benefit or for the benefit of another not entitled to thereof" although courts are loath to apply that unless there's a monetary or similar benefit involved.

Now to the law. There are two sections of law that apply.

Section 705 of the Communications Act of 1934 as Amended [Section 605 of Title 47 of the U S Code] provides that no one receiving, transmitting, or assisting in either may divulge the contents to someone not authorized to receive such or make personal use of the contents. with a whole bunch of exceptions and exemptions.

The Electronic Communications Privacy Act (ECPA), part of Chapter 119 of the US Criminal Code [Section 2510 et seq of Title 18 of the U S Code] provides that no one not authorized by the sender or by the law may merely intercept certain types of communication. The violation exists whether divulgence or personal use takes place or not. This is the section of the law that provides the illusion of secrecy to cell phone communications, among others. Again, there are a whole slew of exceptions and exemptions.

Note that both sections exempt transmissions from amateur, CB, marine, and aviation stations and communications relating to a disaster, as well as broadcast programming (AM, FM, TV but not "satellite" TV) intended for direct reception by the general public.

For more information. "inquire within". This is one of my specialties.

The difference has to do with how the coding is done. The following is all from memory:

60 wpm Morse works out to 3000 bits per minute or 50 bits per second using the "PARIS" formula.

Your 45 baud Model 15 Teletype was in all probability what hams called a "60 wpm 5-level Baudot" machine. We had similar machines at the University. (In this post I use the term "Baudot" to mean the 5-level TTY code US hams used for many years until FCC allowed us other codes like ASCII in the early 1980s)

"Baudot" takes 7 bits to send a character: one start bit, five data bits, one stop bit. A space between words is a character, so to send the word "PARIS" would take six characters including the space character. That's only 42 bits, rather than the 50 bits that Morse requires. Thus the difference - the Baudot machine uses 16% less bits to send the same message. The speed difference works out to about 10% because the Baudot stop bit was longer than the others in the machines US hams typically used.

So you don't get the full 16% advantage that you'd expect from the raw numbers. But since only six of the 42 bits are stop bits, the difference is small.

To make it even more of a sporting course, the above WPM advantage of the Baudot machine is message-dependent, same as for Morse. In Morse, the message-dependency comes from the different characters being of different length; a five-letter word like "TENET" takes a lot less time to send than one like "JUICY", while in Baudot they both take the same time to send.

But in the Baudot code the numbers and some other characters are sent by shifting from "LTRS" to "FIGS", (letters to figures), so sending mixed groups could take a lot of extra characters that Morse does not require.

For example, in Morse you could just send the group "6A8G7" as 5 characters, but to send it on a Baudot machine you had to send "<figs>6<ltrs>A<figs>8<ltrs>G<figs>7", which is 10 characters.

So the WPM are really approximations, and the BPS/baud measures took over.

>

Your Model 15 Teletype at the nominal 60 wpm speed, which is actually 368 chars/minute and 45.45 baud works out like this. The character length is 7.42 bits long (for ancient, interesting reasons I won't go into right now) and the bit duration is 22 milliseconds. The character duration is therefore 7.42 * 22 = 163.24 milliseconds, and that works out to 6.12595 characters/sec = 367.55 characters/minute. To convert that to words you have to figure 6 characters per word because the space between words is also a character. So the speed is actually 61.26 words/minute.

Teletype speed is sometimes confusing because there are a couple of other speeds out there. Western Union liked to use a 7.00 unit character rather than 7.42. With 45.45 baud, or 22 ms pulses, this gives 154 milliseconds/character, or 6.49 characters/second, 389.6 character/min and hence 65.9 words/minute. This is completely compatible with 7.42 unit code because the baud rate is 45.45 for both. But then there is European 50 baud Telex using a 7.5 unit code. This is a 20 millisecond bit for a character length of 150 milliseconds, 6.67 characters/second, 402 chars/minute, 67 words per minute. This is not compatible with the other two codes because the baud rate is different; but if you say something like "66 wpm" you could be talking about either scheme.

Now when you get to ASCII, the old Teletype machines transmitted 8 data bits per character and used an 11.0 unit code. This makes 100 wpm work out to 110 baud. Electronic terminals don't need 11 unit code; they can do just fine with 10. Thus the words-per-minute is numerically equal to the baud rate. 100 baud -> 10 ms/bit -> 100 ms/char -> 10 chars/sec -> 600 chars/min -> 100 wpm.

Morse has already been explained. A Morse dot is actually two bits, since there is the dot followed by the space that makes it distinguishable from what comes next. A Morse dash is four bits, counting the space, and the word space is three dot times or 6 bit times. Then the word PARIS contains 50 bit times counting the space. So one word per second is 50 bits per second and 60 wpm. As an aside, the military sends a lot of encrypted 5-letter code groups, so instead of PARIS the Signal Corps uses CODEZ as a test word more statistically correct for their kind of traffic. And CODEZ contains 60 bits.

Thank you for your service to our country, Dave. You did that sort of
thing
for how many years, on top of military service?

bwaahaahaa!

Around here, "WAWA" means something completely different: Popular
convenience stores.

Perhaps the Type 8 will have a dimmer pot.....

No matter; the important thing is that knowledgeable folks have
presented valid data.

I found "The Care And Feeding of Power Tetrodes" free for the
download,
along with lots more Eimac stuff at the BAMA mirror site.

They also have quite a few of the GE Ham News periodicals scanned.

> There is a great difference between a receiving-type
> tube run at relatively low voltages and a high power transmitting tube
> run at high voltages. Their construction is quite different.

Until relatively recently, oxide-coated cathodes could not withstand high plate voltages, so tubemakers continued to use thoriated-tungsten filaments for transmitting tubes beyond 100-200 W or so. Tube size is another factor; a 3-500Z can handle more than ten times the watts of a 6146 but is not ten times the size, so other methods have to be employed.

> > Or that, in the case of high-gain glass tetrodes like

> pointed out in the e-ham forum, Nonex glass was used in some later sweep
> tubes to help in preventing suck-in.

I think the horizontal output suck-in problem was simply caused by excessive heat from the plate, in a poorly-ventilated TV.

What is described by Eimac in "Care And Feeding" was the glass being softened by electron bombardment of the glass, caused by running the tube lightly loaded (low plate current).

> Having the parts to keep something running isn't the
> problem. Storage is.

I could tell ya stories about *storage*....

> I've read articles stating that NASA is having real problem as those

Or are dead. Consider that someone who was, say, 40 years old in 1964 and working on the Apollo project would be 84 today.

> What I might have considered is that
> newer composite decking material which is designed to last for decades.

The composite deck material is great stuff but it's softer than Corian, and I didn't have any. Plus I don't think it comes in white. (Note to self - raid relative's basement for the rest of the Corian before they decide to toss it.)

> I'm not familiar with the term "balloon framing". I'm looking it up. I
> don't think there's anything available from my local lumberyard in
> lengths exceeding 16'.

We used to be able to get up to 20 foot 2x4s but you paid a premium
per
foot and the quality wasn't as good.

> > We call them "McMansions" in these parts.
>
> There are some of 'em in Wheeling, but not many. I think those homes

Yes, that's exactly what caused them. Some folks are left holding the
bag.

> > It is not unusual around here to see a perfectly good house from the

> I can't really understand the "up in arms" part because we really having
> a surplus of existing housing in the country.

What they're up in arms about is that houses in the $300,000 -
$500,000
range are being replaced by houses worth double that or more, on the
same lots. That drastically reduces the number of people who can
afford
to even think about buying them. During a downturn those houses become
unsellable.

On top of that, they tend to increase the impervious surface
percentage of
the lot, so there's more stormwater runoff when it rains. Which floods
the
folks downhill, who were never flooded before, and increases erosion
issues.

> > The amateur radio connection to all of this is that often the house

e
> areas.

I hope and pray I will never have to consider living in one of those
places, but
as time goes on and more old houses are torn down and replaced by
radio-
unfriendly CC&R'd places, the options decrease.

> We're sitting on an acre. � If we re-locate, I'd be happier with 2 or
3
> acres. � I wouldn't object if half of that area happened to be in tree
s
> or woods though.

I've seen the pix; I hope for such a location someday. Non-radio
factors
keep me on my little patch of Radnor Township.

ike
> a geothermal heating/cooling systems are another factor. � W8RHM's new

> place has one and it is a large house. � His heating and cooling bills

> are quite reasonable.

Because he's not really paying for heating or cooling; he's paying to
run pumps.
A few of the locals here have gone to geothermal; it works. The main
problem
is the first cost.

> > Beautiful, just beautiful..
>

I have considered those. If they will fit flat in the current vehicle
they have
possibilities. And again they are multi-use; they won't just be for
FD.

> It is really difficult to buy something which is really ideal for an

> homebrew U-shaped operating position. � The room I'm in at present doe
s
> not lend itself to that.

I don't think anything off-the-shelf is really suited for more than a
very small
ham shack. One problem is depth; the equipment needs to sit pretty far
from the op
but the usual 24-30 inch table or computer desk isn't deep enough.

It really is time for new shack/shop furniture for me. The Southgate
Radio team is
on it....

Sixteen or so, Jim. Whenever one of my Foreign Service colleagues would
gripe about one or another of the African privations, I'd usually add,
"well, at least they aren't shooting at us."

I don't see how that view could be taken. I always had nothing but
admiration for the fellow who homebrewed all or part of his rig.
One of the OT's from Cincinnati had a great station consisting of a
solid-stated National HRO-50 and homebrew SSB transceiver and homebrew
amp. G2FIX's copy of the Collins S-line was some of the most beautiful
homebrew work I've ever seen. I have photos of it somewhere on the web.
If you Google "G2FIX" you may find it on the site of an ex-G living in
5-land.

Tom Rauch W8JI has presented quite a bit of excellent data. He's been
designing linear amps for several companies for quite a number of years.
He once helped me troubleshoot I was having with a burned up plate choke
in an AL-1200 Ameritron amp via telephone from 5,000 miles away.

There's lots of good material there.

> They also have quite a few of the GE Ham News periodicals scanned.

I found those. I think that's where I found a pdf of the vintage Hammarlund clock face. I bought a nice looking HQ-180 a few years back from the newspaper classifieds. It never had a clock installed. I printed the clock face from the pdf and bought an inexpensive 24 hour battery powered movement with appropriate hands from some web site. Of course it won't turn the rig on as the original clock, but those movements are pretty hard to find these days.

Yep, and unlike 6146's, those bottles will show red when run within their designed ratings.

I think a Doug DeMaw amplifier article (later reprinted in the Handbook) showed how the same problem could crop up in a sweep tube amplifier.

> What is described by Eimac in "Care And Feeding" was the glass being
> softened

Right. I don't think anyone could argue that Eimac knew power bottles
inside and out.

>> Having the parts to keep something running isn't the
>> problem. Storage is.
>
> I could tell ya stories about *storage*....

The radio overflow here is in a 16x30 foot Amish barn we had built. It
isn't inconvenient unless it is snowing or, like today, raining heavily.

I don't think I've seen the composite decking in white and yes, grab the
Corian scraps.

Yeah, I recall early handbook articles about 20 foot California Redwood
1x2's or 2x4's. Here in the East, I never saw any of that stuff in
lumberyards.

>>> We call them "McMansions" in these parts.

Well, I consider that a bag of their own making. They tried to buy more house than they were really able to afford and they opted for those variable-rate loans. They seemed to have forgotten that the rates could go up as well as down.

>>> It is not unusual around here to see a perfectly good house from the

I'm used to living in an area where there aren't enough people to buy up the houses which are already available. At the same time, more new houses are being built.

> On top of that, they tend to increase the impervious surface

That's too bad. That's perhaps one of the reasons why I don't want to live too near a larger city.

>> We're sitting on an acre. If we re-locate, I'd be happier with 2 or 3
>> acres. I wouldn't object if half of that area happened to be in trees

> factors keep me on my little patch of Radnor Township.

I think we've been spoiled by living out here. It is incredibly quiet--especially in the evenings/nights. The radio quiet is phenomenal. The dark skies make for some really great astronomical views.

>> The "how houses are built" part is what I meant to address. Things like
>> a geothermal heating/cooling systems are another factor. W8RHM's new
>> place has one and it is a large house. His heating and cooling bills
>> are quite reasonable.

> run pumps.
> A few of the locals here have gone to geothermal; it works. The main
> problem
> is the first cost.

I think the things typically run about $10k or so additional over the cost of a new house with conventional heat.

>>> Beautiful, just beautiful..

>> If not beautiful, at least it isn't ugly.

They make fine picnic tables, seating for additional dinner guests,
craft tables and garage sale tables.

Check out PAINT this time. It keeps the grime from getting into the
wood fibers.

I know you said "inquire within" but I hope that this is a short, general-interest question with perhaps a one-word answer. (Except I don't think I've ever seen Phil give anything approximating a one-word answer <grin>).

Phil Kane wrote:

> Note that both sections exempt transmissions from amateur, CB, marine, and aviation stations and communications relating to a disaster, as well as broadcast programming (AM, FM, TV but not "satellite" TV) intended for direct reception by the general public.

What does "exempt" mean in this context? Does it mean that the provisions do not apply at all if the information is transmitted by amateur radio? I'm assuming that this is the case, since it's not unusual for material that we relay to appear in news articles.

Thanks, Phil... I was sure that you would have the information.
Now the final question, that everyone wants to know, BUT was afraid to
ask.....

Have you ever heard of ANYONE, ever being prosecuted for Violation
of Section 705 of the Communications Act of 1934.......

> > convenience stores.
>
> I'm almost afraid to ask for details.

"Wawa" is the local Native American word for what we call a Canada
goose, aka "water pigeon".

Wawa started as a dairy, and to this day there's a small herd of dairy
cows at corporate Hq, in Wawa, PA.
They were big in the milkman/delivery biz in this area.

But in the 1960s, even though business was good, they realized those
days of direct delivery were ending, so they transformed the company
and began opening stores. Originally they handled mostly dairy and a
few related products, but over time the branched out into other
convenience products like hot coffee, made-to-order hoagies (ordered
from a touchscreen) and hot sandwiches, breakfast stuff, deli, etc.

Latest New Thing is the addition of gas pumps where they can get the
land and permits. The gasoline plaza is adequately separated from the
store for good traffic flow, yet not too far to walk easily.

It is not unusual for a vehicle to pull up to a gas pump, and while
the driver fills up, the passenger goes into the store to order
hoagies, get coffee, etc. Service is so good that the passenger is
usually out of the store and back in the vehicle with the goodies
before the driver is done pumping gas - even at rush times like
morning and lunchtime.

The ham radio connection to all this is that the stores are designed
and operated for maximum customer convenience and speed. I have gotten
several ideas for the shack/shop from Wawa stores.

A true master performer is RT. I have a recording of "Bee's Wing".
You'd
think it was a studio recording from the performance and sound
quality,
and that they must have picked the best out of a dozen takes. Yet it's
from
the Philly Folk Festival, live and outdoors.

Truly great performers and operators have a lot in common...

> > No matter; the important thing is that knowledgeable folks have

Simply because he could, I bet.

He's also a very skilled operator, to grossly understate the case.

And when you do find them, they are often worn out. Hallicrafters was
way ahead of its time, putting a clock in a receiver. Now it's common
- even my K2 does it.

> showed how the same problem could crop up in a sweep tube amplifier.

Yes, and they showed how to design for maximum cooling using a simple
fan. Forced-air was a must.

They liked the Compactron-based tubes like the 6KD6 because they had
the suppressor/BF plates

brought out to a pin, so they could run grounded-grid without doing the kind of surgery needed by 1625s and such. Those sweep tubes *were* also plentiful, inexpensive, and worked well with low voltage/high current B+. The article I remember used a link-coupled output tank (!) instead of a pi-net because the output impedance was so low.

At one point I had stuff in the attic, the garage, the shack, the shack ceiling, under the deck, and in three different remote storage sites (only one of which charged me rent). That's been greatly simplified in the past few years.

> > We used to be able to get up to 20 foot 2x4s but you paid a premium

> Yeah, I recall early handbook articles about 20 foot California Redwood
> 1x2's or 2x4's. � Here in the East, I never saw any of that stuff in
> lumberyards.

You have to remember that before WW2 lumber was quite a different commodity; it was inexpensive and plentiful compared to today. A "2x4" was a lot closer to 2" by 4" then, too.

The problem IMHO is that, in the old days, lenders and lending
regulations
were very conservative and would protect the homeowner from him/
herself.
That's all changed now, but a lot of folks don't/didn't realize it.

The big problem right now is that the *lenders* dug themselves a great
big hole
and now can't figure a way out. They bet on constantly-rising RE
prices, so
that they'd make money even if a house foreclosed. Then the market
changed...

> > What they're up in arms about is that houses in the $300,000 -

o
> live too near a larger city.

They are no longer limited to cities. Acquaintance of mine went
looking for the dream-retirement location, found a developer building
custom homes in Colorado. Perfect setup for ham radio, lots of three
acres and up. And a ton of CC&Rs, including no antennas.

iews.

I used to live just north of the Finger Lakes region of New York
State. (That's why
I have a 2-land call). I owned 46 feet of
the original Erie Canal at one point. I know what you mean.

> I think the things typically run about $10k or so additional over the
> cost of a new house with conventional heat.

Depends on how deep they have to drill to get the needed groundwater,
and what they have to drill through.
But such is the future, for those who will look.

> > What is this "paint" of which you speak?
>
> You never use paint?

I prefer varnish.

Right. That happened in Dar es Salaam in 1998. I was here, between
assignments and arrived three weeks after the bombing. The only
shooting which went on at the site of the temporary embassy site was
when a drunken Tanzanian soldier fired three or four rounds from an
AK-47 into the ground. The Tanzanian army was detailed to protect the
temporary embassy after the company of U.S. Marines departed. I never
did get very comfortable coming up the drive with a sleeping Tanzanian
soldier manning the tripod-mounted machine gun in the front yard of the
place.

I ran across the web site and e-mailed the fellow who put it up. I told
him that I'd met Bert in the 70's while vacationing in Salisbury and
that I had more photos of him. He asked if I would be willing to send
the scans to him and allow him to post them on his site. Bert was a
fine fellow and heavily involved in the Royal Signals club, mobile
rallies, FOC and, as you've seen, in homebrewing.

Yeah! I have a Q model of that one. I have it paired with a Lafayette
Preselector/converter so it'll hit 15 and 10m.

There's another site--something about technical books online--where I
was able to download pdf's of old GE, Sylvania and RCA tube manuals
(including a '38 RCA transmitting tube manual) along with early editions
of the Radio Handbook and the ARRL Handbook.

My Omni VI had one but the Orion does not. I have a 24 hour clock atop
the amp, one in the computer and one of those "atomic clock" things
hanging on the shack wall.

Yep, and the carbon anode versions of the bottles will show at least a
dull red.

Heath and Drake were able to use simple fans to cool the SB-220 and the
L-7 with air blown laterally across the tubes, even at the kilowatt
level. I prefer Eimac Air System sockets and chimneys or variations
thereof.

> They liked the Compactron-based tubes like the 6KD6 because they had

> and worked well with

> low voltage/high current B+. The article I remember used a link-coupled output tank (!) instead of a pi-net because the output impedance was so low.

Yep. Quite a number of manufacturers were making sweep tube amps during the period when tube-type televisions abounded. P&H, WRL/Galaxy, SBE and Yaesu come to mind. A couple of others (Dentron and Ameritron) continued well past the time when those tubes were being used in TV sets. It is hard to find finals for those amps these days and the current "cheapy" amps are using Russian or Chinese copies of 811A's or 572B's.

>
> At one point I had stuff in the attic, the garage, the shack, the shack ceiling, under the deck, and in three different remote storage sites (only one of which charged me rent). That's been greatly simplified in the past few years.

I had everything in the basement when I lived in Cincy. Prior to that, I'd generally have a corner of a room as a shack or a part of a basement, with parts stuffed into a closet. My current shack consists of two rooms in the old part of the house. I have a separate staircase and the main shack (about 16x16') and an adjacent room (about 16x12').

>>> We used to be able to get up to 20 foot 2x4s but you paid a premium per foot and the quality wasn't as good.

That's right. There's a lot of the full dimensional lumber used in this
place. Some of it is even oak. Our main staircase is an open design
using full dimensional oak 4x4 stock with oak planks.

In this area there are still many homes in the $150-170k range being built. One can find many existing homes in the 50-90k range. Out here near Cameron, it is possible to buy a perfectly good house for under 30k.

That's not *my idea* of a dream. I'm sure there are plenty of spots within that state where it is possible to buy some land and built a house, not that I'd want to.

"I've got a mule and her name is Saaaal..."
That has to be pretty territory.

My guess is that not many folks have the opportunity to do terribly much about choosing a home based upon amateur radio until they retire. It'd be tough to find yourself interersted in becoming a radio amateur after you'd already bought a place in one of those developments under covenants and restrictions.

I may be mistaken, but I don't think any groundwater is used at W8RHM's place. His is a horizontal system and I believe it uses air. I'll have to ask. It surely doesn't cost much to heat air fifteen or sixteen degrees higher or cool it up to thirty or forty degrees lower than ambient Earth temperature.

>>> What is this "paint" of which you speak?
>> You never use paint?
>
> I prefer varnish.

Ahhh! Well if you have crappy-looking stock to begin with, you can fill the blems, sand it smooth and, after painting, you'll have an attractive piece. If you just cover the blems with varnish, you'll be able to look right through it and see the blemishes.

There are a lot of cases brought under Section 705, most having to do with theft of satellite TV programming or bootleg cable TV descramblers which are covered by other subsections of Section 705. One curious case involved a subscription-TV provider who enabled

Canadian providers to intercept its signals as opposed to a Canadian program supplier competitor, the case being brought on complaint of the Canadian government because the violator and the site of the violation was in the US.

Most of the cellphone or cordless phone interception cases are brought under the Wiretap Act (the ECPA) of the U S Criminal Code, Title 18.

The most famous case of off-the-air interception and divulgence involved a conversation between certain officials of the Republican party which was passed to "others", but long before that there were a few cases of taxicab radio interception by competing cab companies whose drivers "jumped" calls.

There's a certain British approach to engineering and craftsmanship
that is underappreciated on this side of the pond IMHO.

For example, the BBC was doing regular scheduled electronic TV
broadcasting in 1936-37, and only shut down when WW2 broke out.

They invented things like the re-entrant multiple cavity magnetron,
practical jet engines, the dambuster bomb and delivery system (fly a
Lancaster 50 feet off the water at night? No problem!) and much more.

I have an RSGB handbook from the 1960s. It's quite different from the
ARRL Handbooks of the time - more technical, more projects, more
advanced and varied stuff. But nothing on operating, history,
licensing, or the RSGB.

For example, the phenomenal G2DAF receivers, particularly the last
version. Incredible sophistication and performance.

Of course part of that was the different economics of homebrewing in
Europe at the time.

> > I like the pot idea better - just like the BC-348...

For years I had a BC-348R, and the book. Took it many places, acquired
two parts units. Sold 'em when I moved from the house on
RadioTelegraph Hill.

I kept the BC-342-N that I bought for two dollars at a hamfest in

Wrightstown many years ago.

Good stuff!

> > He's also a very skilled operator, to grossly understate the case.

Yes but even the best rig and antenna will not make up for a lack of
operator skill.

Pete Millett's site. All kinds of stuff. There's also Frank's Tube
Data Pages.

> � I have a 24 hour clock atop
> the amp, one in the computer and one of those "atomic clock" things
> hanging on the shack wall.

I have a classic Numechron Tymeter 24 hour digital clock for the
shack. It was made from parts of three junkers back in the 1980s and
runs perfectly today. I might have three dollars invested in it.

> and Yaesu come to mind. �

What did P&H make? The only product of theirs I remember was the
LA-400, which used four surplus 1625s doctored so the BF plates had
their own base pin and could be grounded. Not all brands of 1625 could
be converted like that, but some could.

>A couple of others (Dentron and Ameritron)

> 572B's.

Yup. There are also conversions of those old amps to use other tubes,
mostly Soviet types. Some amps like the Heath SB-230 can often be had
for a song because the tube they use is so expensive and hard to find.

Back in the 1960s the ARRL Handbook had a single 3-1000Z amp that
still looks good today. In inflation-adjusted dollars it probably
costs less now than it did then.

> > Some will argue such points anyway.

NICE!

In the house on RadioTelegraph Hill, everything was in the basement.
But it was a big basement. (sigh) Less room here.

My house in Palmyra NY was built in 1900. It's still there, looking
good.

Hopefully. IMHO, too often folks do not know history, and repeat it.

"Fifteen Miles on the Erie Canal."

Centerport - Port Byron - Lock Berlin - Port Gibson - Wayneport -
guess where those place names came from?

> That has to be pretty territory.

The best. Plus to the south are the drumlins and the lakes. Winters
are tough but the folks there are used to them.

> My guess is that not many folks have the opportunity to do terribly much

If then!

>� It'd
> be tough to find yourself interersted in becoming a radio amateur after
> you'd already bought a place in one of those developments under
> covenants and restrictions.

That is one of the major challenges facing amateur radio today. If
someone is already a ham, they should know enough to avoid buying a
restricted place. But how many people will move just to have an
outdoor antenna?

> >> I think the things typically run about $10k or so additional over the

I did some research and found there are several types of system.
Groundwater is only one type, popular on small lots where there's no
room horizontally.

Where there is enough land, what is done is to bury a field of pipes
and run water through them.

> > I prefer varnish.

I don't use crappy-looking stock where it will show....

The first table I built, way back in the early 1970s, was made from
the wood in old shipping pallets. These were *old* pallets, and the
wood in them was incredible. I had access to a radial arm saw and a
planer, and made my own stock.

> They invented things like the re-entrant multiple cavity magnetron,
> practical jet engines, the dambuster bomb and delivery system (fly a
> Lancaster 50 feet off the water at night? No problem!) and much more.

Somewhere here in the shack, I have a little green hardbound book on
Baird's work.

> I have an RSGB handbook from the 1960s. It's quite different from the
> ARRL Handbooks of the time - more technical, more projects, more
> advanced and varied stuff. But nothing on operating, history,
> licensing, or the RSGB.

You can make up for that lack of info if you can find a wonderful book
from the 70's called, "The World at Their Fingertips".

> For example, the phenomenal G2DAF receivers, particularly the last
> version. Incredible sophistication and performance.

Really great designs. He kept at it for a long time. He provided many
mods for commercial rigs like the Yaesu FT-101 series.

> Of course part of that was the different economics of homebrewing in
> Europe at the time.

...and that went on through the 70's too. Taxes on imported equipment
were very high throughout most of Europe.

>>> I like the pot idea better - just like the BC-348...
>
>> Yeah! � I have a Q model of that one. I have it paired with a
>> Lafayette
>> Preselector/converter so it'll hit 15 and 10m.
>
> For years I had a BC-348R, and the book. Took it many places, acquired
> two parts units. Sold 'em when I moved from the house on
> RadioTelegraph Hill.
>
> I kept the BC-342-N that I bought for two dollars at a hamfest in
> Wrightstown many years ago.

That's another worthy receiver. My old pal K8IP had the '348Q. It's a
real keeper. Over the years I've had a number of the 342's, 312's and
348's.

>>>> Tom Rauch W8JI has presented quite a bit of excellent data. �
>>> Agreed. Not only that, but in easily-understood form, with data to
>>> back it up.
>>>> He's been
>>>> designing linear amps for several companies for quite a number of years
> .
>
>>> I did not know that! He's not one to brag, though.
>
>> Dentron, Ameritron and perhaps a couple of others.
>
> Good stuff!

...and affordable--sort of the everyman's amp series from both companies.

>>> He's also a very skilled operator, to grossly understate the case.
>
>> ...assisted by an antenna farm to die for.
>
> Yes but even the best rig and antenna will not make up for a lack of
> operator skill.

...not by themselves, but they'll surely put a dent in it. It's not
easy to establish a run if you can't be heard.

>> There's another site--something about technical books online--where I
>> was able to download pdf's of old GE, Sylvania and RCA tube manuals
>> (including a '38 RCA transmitting tube manual) along with early editions
>> of the Radio Handbook and the ARRL Handbook.
>
> Pete Millett's site. All kinds of stuff. There's also Frank's Tube
> Data Pages.

I'll check that one out.

>> � I have a 24 hour clock atop
>> the amp, one in the computer and one of those "atomic clock" things
>> hanging on the shack wall.
>
> I have a classic Numechron Tymeter 24 hour digital clock for the
> shack. It was made from parts of three junkers back in the 1980s and
> runs perfectly today. I might have three dollars invested in it.

I used to have one of those and would love to find another. They're
getting rather pricey these days. I'm happy to report that I have less
in my atomic clock than you have in your tymeter. My neighbor bought it
new and gave it to me when the outside temperature transmitter quit
working. I found a web site where I can order the transmitter for ten
bucks postpaid.

>>> They liked the Compactron-based tubes like the 6KD6 because they had
>>> the suppressor/BF plates
>>> brought out to a pin, so they could run grounded-grid without doing
>>> the kind of surgery needed by
>>> 1625s and such. Those sweep tubes *were* also plentiful, inexpensive,
>>> and worked well with
>>> low voltage/high current B+. The article I remember used a link-
>>> coupled output tank (!) instead of
>>> a pi-net because the output impedance was so low.
>> Yep. � Quite a number of manufacturers were making sweep tube amps dur
> ing
>> the period when tube-type televisions abounded. � P&H, WRL/Galaxy, SBE
>
>> and Yaesu come to mind. �
>
> What did P&H make? The only product of theirs I remember was the
> LA-400, which used four surplus 1625s doctored so the BF plates had
> their own base pin and could be grounded. Not all brands of 1625 could
> be converted like that, but some could.

That's right. P&H's later offering was a low profile, chrome plated
until called the P&H Spitfire--the LA-500M. It used six 12JB6's at 500w
input and was introduced in the early 60's.

>> A couple of others (Dentron and Ameritron)
>> continued well past the time when those tubes were being used in TV
>> sets. � It is hard to find finals for those amps these days and the
>> current "cheapy" amps are using Russian or Chinese copies of 811A's or
>> 572B's.
>
> Yup. There are also conversions of those old amps to use other tubes,
> mostly Soviet types. Some amps like the Heath SB-230 can often be had
> for a song because the tube they use is so expensive and hard to find.

One of the most modified is the old Dentron MLA-2500 which used
expensive and hard to find metal ceramics. Svetlana published a mod
using a pair of their modestly priced metal ceramics.

> Back in the 1960s the ARRL Handbook had a single 3-1000Z amp that
> still looks good today. In inflation-adjusted dollars it probably
> costs less now than it did then.

Those bottles are hard to come buy these days. I think it is hard to
beat a pair of 3-500's for legal limit or near legal limit power.
They're relatively inexpensive, can be used with or without the air
system chimneys and sockets and the graphite anode variants are quite
rugged.

>>> Some will argue such points anyway.
>
>> There's arguing and there is successfully arguing.
>
> True!

Heh.

>>> At one point I had stuff in the attic, the garage, the shack, the
>>> shack ceiling,
>>> under the deck, and in three different remote storage sites (only one
>>> of which
>>> charged me rent). That's been greatly simplified in the past few
>>> years.
>> I had everything in the basement when I lived in Cincy. � Prior to tha
> t,
>> I'd generally have a corner of a room as a shack or a part of a
>> basement, with parts stuffed into a closet. � My current shack consist
> s

>> using full dimensional oak 4x4 stock with oak planks.
>
> My house in Palmyra NY was built in 1900. It's still there, looking
> good.

We have a goodly number of those in this area, on both sides of the
river and into Greene County, Pennsylvania. Many of them have been
updated, insulated and look good. Many others haven't.

>> In this area there are still many homes in the $150-170k range being
>> built. � One can find many existing homes in the 50-90k range. � O
> ut here
>> near Cameron, it is possible to buy a perfectly good house for under 30k.
>
> Boy do I want to move! But one has to go where the jobs are.

...right up until retirement time rolls around. Then you're free to
live where you like.

>>> They are no longer limited to cities. Acquaintance of mine went
>>> looking for the dream-retirement location, found a developer building
>>> custom homes in Colorado. Perfect setup for ham radio, lots of three
>>> acres and up. And a ton of CC&Rs, including no antennas.
>> That's not *my idea* of a dream. � I'm sure there are plenty of spots
>> within that state where it is possible to buy some land and built a
>> house, not that I'd want to.
>
> He looked elsewhere. Point is, you'd have thought places like that
> would not be CC&R'd but they were.

I've been going through realtors listings for the southern part of this
state, getting an idea of what's available and what prices are
like--this for our eventual sale of this place to the approaching
longwall coal mine. I'm not bookmarking any homes which are in
subdivisions.

>>> I used to live just north of the Finger Lakes region of New York
>>> State. (That's why
>>> I have a 2-land call). I owned 46 feet of
>>> the original Erie Canal at one point. I know what you mean.
>> "I've got a mule and her name is Saaaal..."
>
> "Fifteen Miles on the Erie Canal."
>
> Centerport - Port Byron - Lock Berlin - Port Gibson - Wayneport -
> guess where those place names came from?

Gee, Jim, I don't know--the Eric Canal?

>> That has to be pretty territory.
>
> The best. Plus to the south are the drumlins and the lakes. Winters
> are tough but the folks there are used to them.

I think you mean that they've learned to put up with them.

>> My guess is that not many folks have the opportunity to do terribly much

>> about choosing a home based upon amateur radio until they retire.
>
> If then!

Most but "stay putters" have the option. You needn't sell the XYL on an
antenna farm. Practice saying things like, "plenty of room for a
garden" and "park-like setting".

>> � It'd
>> be tough to find yourself interersted in becoming a radio amateur after
>> you'd already bought a place in one of those developments under
>> covenants and restrictions.
>
> That is one of the major challenges facing amateur radio today. If
> someone is already a ham, they should know enough to avoid buying a
> restricted place. But how many people will move just to have an
> outdoor antenna?

There are always guys like me. *grin*

>>>> I think the things typically run about $10k or so additional over the
>>>> cost of a new house with conventional heat.
>>> Depends on how deep they have to drill to get the needed groundwater,
>>> and what they have to drill through.
>>> But such is the future, for those who will look.
>> I may be mistaken, but I don't think any groundwater is used at W8RHM's
>> place. � His is a horizontal system and I believe it uses air. � I
> 'll have
>> to ask. � It surely doesn't cost much to heat air fifteen or sixteen
>> degrees higher or cool it up to thirty or forty degrees lower than

There's an idea for a guy who needs a sturdy but inexpensive table for the shack. A couple of local outfits near here have so many pallets that they are constantly running ads in the local paper for "free wooden pallets".

Thanks for reading this.

I have a number of Sounders, some old keys, and some relays from the American Morse landline era. It occured to me that I might take up reenacting as another hobby, but when I asked my sister, who makes clothing for reenactors, "What does it cost?", she casually mentioned "Less than a thousand".

So, I'm looking for a discount version: I've got enough invested in _this_ hobby. ;-)

Please answer these questions:

1. Would I have to have perfect replicas of the clothes, etc.? I'm just interested in the telegraphy, and civilians used to do that as well as the military, so reenacting as a civilian would be fine.

2. Does all the telegraph gear have to be authentic to the period? I'd tend to doubt it, simply because instruments _that_ old would be too valuable for use in the field.

3. Who can I talk to for help without spending a day doing research online?

Thanks for any information.

73, Bill W1AC

I am looking for a small portable laptop about the size of a DVD player, with minimum Hard drive size and some memory, something I can load XP on, and that has a USB port, has a close to possible full size keybd, a sound card, and runs on 12v battery and/or on a 12v power cord I can plug into a cigarette lighter.

I want to be able to run some of the HAM digital modes while in the field and don't want to schlep a heavy laptop around.

I heard that something like this might be available, for a street price of less than or around $250.00, but I have lost the reference page to it.

73's

==> HAMS ON HAND AS TORNADOS SWEEP THROUGH GEORGIA, DOWNTOWN ATLANTA

When tornados swept through Georgia this past weekend, Amateur Radio operators were on hand to assist where needed. On Friday, March 14, an EF-2 tornado touched down in downtown Atlanta at 9:38 PM (local time). The National Weather Service said the twister was 6 miles long and 200 yards wide. Downtown Atlanta was a busy place that evening; not only was there a professional basketball game, college basketball fans were in town for the Southeast Conference tournament at the Georgia Dome. Due to the tornados, the final college game of the day was postponed until the next day. According to reports, the tornado blew off portions of the roof of the Georgia Dome.

An EF-2 tornado has wind speeds from 111-135 MPH. In such a tornado, roofs are torn off well-constructed houses, foundations of frame homes are shifted, mobile homes can be completely destroyed, large trees are snapped or uprooted, light-object missiles are generated and cars can be lifted off the ground.

ARRL Georgia Section Manager Susan Swiderski, AF4FO, said "William Chandler, KG4JTK, went from house to house in the wind and the rain checking for any injuries in the homes that had sustained damage by falling trees and debris. At the same time, he issued reports via radio to Barry Kanne, W4TGA, the Emergency Coordinator for neighboring DeKalb County, regarding fallen trees, billboards, power lines and other threats to public safety. Barry relayed this information to the Atlanta

911 center and to the Grady Hospital Emergency Operations Center." DeKalb County is directly to the east of Fulton County; Atlanta is the county seat of Fulton County.

The City of Atlanta Web site reported that "[e]xtensive damage has been reported to a number of landmark buildings in downtown, including the Omni Hotel, Georgia World Congress Center, CNN Building, the Georgia Dome and Phillips Arena and homes and businesses in nearby neighborhoods." The Red Cross opened a shelter at Central Recreation Center. There was "no external damage" to Hartsfield International Airport.

Eyewitness accounts said that "huge hunks of metal and broken glass were everywhere [in Atlanta], as well as overturned cars and benches in the road. Olympic Centennial Park is a mess." The high winds caused major damage to several other landmarks including the Georgia World Congress Center. Many hotels and office buildings had their windows blown out. Grady Memorial Hospital, the major trauma center for the Atlanta metro area, had its 100 foot tall communications tower blown off the hospital roof, disabling communications with emergency medical personnel.

ARRL Georgia Section Traffic Manager Charles Pennington, K4GK, served as Net Manager during the storms: "After several hours of recovery and damage assessment, it became obvious that while Atlanta had received major damage to downtown area, there were no fatalities reported and amazingly only 21 persons were treated for injuries." Two fatalities were reported in northwest Georgia.

In Effingham County, near Savannah on Georgia's coastline, Swiderski said a tornado "took down six power towers during the annual St Patrick's Day celebrations," thrusting the community into "total blackout conditions."

"A local 2 meter SKYWARN net, with Greg Tillman, N4VAD, serving as NCS, provided a vital link with the staff at Memorial University Medical Center in Savannah. Dr Ra Meguiar, N4RVM, a physician and senior hospital administrator, later sent a letter of appreciation in recognition of the local hams 'for staying with us through the weather and the power outage.' He said that this was his first experience in participating in a severe weather net and the 'support was invaluable,'" Swiderski said.

According to Swiderski, reports came mostly through the linked repeater system, "usually from a liaison from one of the many local nets that were going on in county after county, but there were also reports from stand-alone hams who had the misfortune of being in an affected area. There were reports of wall clouds, funnel clouds and hailstones -- large hailstones, sometimes as large as baseballs."

Tillman said that two mobile homes were completely destroyed and one was "tossed like a rag doll, rolling over numerous times 100 feet from its foundation where the anchors were pulled up from the ground." Nearly a dozen other homes and automobiles were damaged; five people from

Effingham were transported to the local hospital for treatment and evaluation, he said.

"In some of the counties, this event was a true 'baptism under fire' for brand new Emergency Coordinators," Swiderski said. "I'm pleased to say that they all conducted themselves and all of the challenges admirably."

==> STATION LOCATOR SERVICE NEW FOR FIELD DAY 2008

This year, for the first time, the ARRL has put together a Station Locator to help amateurs or those interested in Amateur Radio find a Field Day site near them. According to ARRL Field Day Manager Dan Henderson, N1ND, many amateurs have been asking for something like this for many years.

If your group would like to be a part of the Station Locator Service, it's easy to get started. Just go to the Field Day Station Locator Web site <http://www.arrl.org/contests/announcements/fd/locator.php> and follow the instructions.

To help you out, Henderson has prepared a FAQ for the Field Day Station Locator.

Q) How does our Field Day site get listed on the map?
A) A club official or Field Day Chairman needs to go to the Web site. Once there, click on the link for "Add a Station" and follow the instructions.

Q) I put in the name of the park where we will be holding Field Day but got the message that the program can't find it. What do I do?
A) You should use a street address for the location. Unfortunately, the mapping program doesn't have a 100 percent complete database of park names and public site names. You may use a latitude/longitude -- enter the values separated by a comma (e.g. 42.345N, 85.445W) and set the city to NONE).

Q) I put in a street address but the map locator put me it in a wrong location on the street. What do I do?
A) While in the data input or edit screen, use your cursor to move the red "pin" to the correct location on the map.

Q) What if I put in the wrong information or something about our Field Day operation changes?
A) The person who input the data will be able to edit the entry. Simply follow the "Add a Station" link and then select "Edit this entry" next to the one to correct.

Q). I tried to enter my club's information, but I was denied access. What do I do?
A) To help ensure that only one person is managing a club's entry, you must be logged onto the site with your ARRL member ID and password. If you are not an ARRL member, ask a member of the club who is to be responsible for adding the club's information to the site.

Q) I am looking for a Field Day operation to attend. How do I use the site?
A) Begin by typing in the city and state where you would like to search, something like "Brooklyn, New York" or "Anaheim, California." Depending on the geographic location, the map will take you to the area you list. If a Field Day operation has been registered for that general area, a red "pin" will show on the map. If you click on the red pin, the details for that site will appear in the box on the right hand side of the screen. If you don't see a red pin, scroll out a level to find one near the location you listed. It is also possible to drag the map to other areas by holding down the left button on your mouse and then moving the map around. You can also scroll in and out using the +/- buttons on the left side of the map. You may also zoom in and center by double-clicking with the mouse near the red pin.

Q) I found a red pin near where I will be. Where do I find the information on that site?
A) Each entry has a contact person with either an e-mail address or phone number who should be able to help you. It will appear on the right side of the box when you click on the red pin for an entry.

Q) I found an entry with wrong information. What should I do?
A) Please contact the person whose name appears as the contact person for that site. ARRL HQ does not have detailed information on the site.

Q) I want to check on our club's information. What should I do?
A) Type in the call sign that will be used and you will be taken to the location and club information.

ARRL Field Day will be held June 28-29. For more information, please visit the Field Day Web page <http://www.arrl.org/fieldday>.

==> "THE DOCTOR IS IN" THE ARRL LETTER

This week, ARRL Letter readers are in luck! The ARRL's very own Doctor, author of the popular QST column "The Doctor Is IN," answers a question from his mailbag:

Question -- Jeff Otto, WA1QYW, of Framingham, Massachusetts, asks: I have a new SSB transceiver, and I noticed something peculiar. When I tune to an empty frequency, say on 20 meters, with absolutely no signals and only noise, and I switch the mode between USB and LSB, the received "tone" of the background noise changes. On one position, it sounds like it consists of more high frequency components, and on the other position it sounds like more low frequency components. I would have thought that white noise would sound the same, regardless of which sideband is being received. In normal SSB operation, this effect is not really noticed. I'm wondering if there is some sort of a misalignment in the radio.

The Doctor Answers -- Jeff, I agree with your diagnosis. Switching between USB and LSB switches the "BFO" or injected carrier frequency from one side of the SSB filter bandwidth to the other. There are a few exceptions, notably the early RL Drake tube transceivers that kept the same BFO frequency but switched the filters. Switching the BFO frequency is generally cheaper than having two filters.

There are two possibilities: One, that the shape of the filter passband is not flat. If it's higher on one side than the other, that will translate to stronger high frequency response on one sideband and stronger low on the other.

The other, and I would say more likely, possibility is that the BFO oscillators are not spaced the same distance from the edge of filter bandwidth. In one case you might have (with a 2.1 kHz filter, for example) with 200 Hz offset, an audio response from 200 to 2300 Hz, while the other sideband if spaced 400 Hz will have a response from 400 Hz to 2500 Hz. The usual design response is from 300 Hz to 300 + the filter bandwidth.

You can test this by using a good low-level audio generator in the microphone input (set to the same level as the mic audio), and checking the response at the audio monitor jack, if your radio has one. You could also check with another receiver, but unless it is very wideband, you would really be measuring the combination of offsets and filters in both radios.

If your transceiver has a PASSBAND TUNING or IF SHIFT control, you can move it to make the receive audio sound the same on either sideband, but that won't help on the transmit side. If it's not very different, and if you get good audio reports on both sidebands, you could also just pretend you hadn't noticed!

==> ARRL MEMBERSHIP NEWSLETTERS, BULLETINS AND NOTIFICATIONS

Did you know the ARRL offers more newsletters than just The ARRL Letter? One of the many ARRL membership benefits includes other newsletters, such as the ARRL Contest Rate Sheet (a bi-weekly contest newsletter), the ARES E-Letter (sent monthly, containing public service and emergency communications news), the ARRL Club News, the ARRL Instructor/Teacher E-Letter and the IARU E-Letter.

You can also elect to receive news and information from your Division Director and Section Manager (keep in mind that not all Divisions/Sections send notices), as well as W1AW bulletins that relate to DX, propagation, satellites and Keplerian reports. The ARRL also offers a free notification service to members, letting them know when their membership and license are due to expire.

Sign up for these newsletters, bulletins and notifications on the Member Data page of the ARRL Web site <http://www.arrl.org/members-only/memdata.html>.

==> NATIONAL HURRICANE CONFERENCE SET FOR APRIL

The 30th Annual National Hurricane Conference <http://www.hurricanemeeting.com> begins on March 31, running through

April 4 at the Rosen Centre Hotel in Orlando, Florida. This annual event brings together many disciplines in the Emergency Management field to address tropical events that impact the United States.

Once again, Amateur Radio is being highlighted on Tuesday, April 1 in a 4.5 hour training session. ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, is the Chairman of the Amateur Radio Committee of the NHC, and has put together what he calls "a worthwhile learning experience for the attendees."

Leading off the afternoon will be a presentation on Amateur Radio and the National Hurricane Center (NHC) Station WX4NHC <http://www.fiu.edu/orgs/w4ehw> by John McHugh, K4AG, and Julio Ripoll, WD4R, the Amateur Radio Coordinators at the NHC <http://www.nhc.noaa.gov>. The VoIP Hurricane Net <http://www.voipwx.net> will then be highlighted in a presentation by Rob Macedo, KD1CY, Director of Operations.

The final formal presentation of the afternoon will be the subject of Macedo's and Dura's "Emergency Management's use of Amateur Radio for Situational Awareness and Disaster Intelligence." This discussion is focused on the Emergency Managers and their staff to give them clear concepts to include Amateur Radio in their operational plans beyond the more traditional uses of emergency traffic handling. As time permits, the afternoon will conclude with an open forum on current issues in Amateur Radio's response to tropical events.

==> EMCOMMWEST COMING TO RENO IN MAY

EMCOMMWEST 2008 -- an ARRL specialty convention devoted entirely to emergency communications -- is coming to the Circus Circus Hotel Resort in Reno, Nevada May 2-4.

ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, will host an Emergency Communications forum and deliver the keynote address. Gordon West, WB6NOA, will be the special guest for the Saturday night banquet; West will also bring his mobile communication unit and present an "Introduction to Emergency Communications" forum on Saturday. Special Counsel of the FCC's Enforcement Bureau Riley Hollingsworth had been scheduled to make an in-person appearance, but instead will attend EMCOMMWEST via a special video presentation.

The Reno Spring Hamswap will be held on Saturday, May 3 starting at 6 AM, adjacent to the hotel (corner of Sixth and Sierra). Everyone is invited to swap and sell. Unlike last year, there are no charges for buyers or sellers. Bring your own tables or swap out of the back of your vehicle.

There are four tracks of programs currently scheduled for EMCOMMWEST: General/Technical EmComm (covering public relations, hazmat awareness, recruiting EmComm teams and more), EmComm 101 (including an introduction to Emergency Communications, Net Control Station training, message handling training, EmComm go-kits and a message handling competition), EmComm Served Agencies (including a weather spotter class, emergency operation centers, search and rescue, Salvation Army, MARS and CERT), and Education and Recruiting (including a Technician "Ham Cram" and VE sessions). The Ham Cram is for anyone interested in obtaining their Technician class license without suffering through a classroom environment.

There will be a special event station, N7Z, on HF, UHF and VHF. A special QSL card will be available.

Registration is now available online via the EMCOMMWEST Website <http://www.emcommwest.org>. Special room rates are available from Circus Circus <http://www.circuscircusreno.com/>. Please visit the EMCOMMWEST Web site or e-mail <info@emcommwest.org> for more information

==> EMMETT FREITAS, AE6Z (SK)

Emmett Freitas, AE6Z (ex-W6OIA), known as "Shorty" to his friends, passed away February 23. An ARRL Life Member, Freitas was on the Volunteer Examiner team that administered the first Amateur Radio license test session on August 31, 1984. He went on to participate in a total of 548 test sessions. Freitas, a US Navy veteran in WWII, served as a Chief Petty Officer (Radioman) on the USS Parakeet, as well as other duties in and around the Panama Canal Zone, the Galapagos Islands, Ecuador and Lakehurst, New Jersey. A memorial service was held in his home city of San Jose, California on March 7.

==>SOLAR UPDATE

Tad "But by the Sun-spark on the sea" Cook, K7RA, this week reports: ARRL Headquarters is closed for Good Friday on March 21, so this bulletin is coming out a day early, and on the vernal equinox. We had a few more days with visible sunspots over the past week. Sunspot numbers on March 15-17 were 12, 12 and 11. Over the past month, we seem to have a single sunspot appear for a few days, then fade away or rotate out of view, then another pop up after four or five days. Projection for the near term is planetary A index of 5 for March 20-24, then 10, 20, 25, 20 and 8 for March 25-29. There are similar returns to planetary A index of 25 predicted for April 5, April 23 and May 2, but otherwise quiet. Geophysical Institute Prague predicts quiet to unsettled conditions for March 21, quiet March 22-24, unsettled March 25 and active March 26-27. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, look for the ARLHS Annual Spring Lites QSO Party from March 21-30. The NCCC Sprint is March 21.

The BARTG Spring RTTY Contest is March 22-24. The UBA Spring Contest (2 Meters) is March 23 and the SKCC Sprint is March 26. Next weekend is another running of the NCCC Sprint on March 28. The CQ WW WPX Contest (SSB) is March 29-30. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, March 23, 2008, for these online course sessions beginning on Friday, April 4, 2008: Technician License Course (EC-010); Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

===

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

I saw the very same thing a few weeks ago in the news paper on sale at Fry's for just about $250 w/o software. I was unable to locate it on their website, and I don't remember the manufacturer name.

These little boxes open up a whole new world if you ask me. They are not much bigger than a DVD drive, are powered by 12V DC and draw a bit over 1 amp. They would make a cool station computer and take up very little space. They could operate off of battery power easily and are quite capable machines.

Oh,

One more thing I saw in QST you might be interested in. Some guys
have a "build it yourself" portable device that was set up to do some
HF digital stuff. It was based on a couple of PIC's and if I remember
right could be built for less than your $250. You just plug in a
keyboard and wire the thing to your portable radio and volia PSK is
yours w/o a computer.

Searching for it on the ARRL's website says it's on Page 35 of the
March 2008 issue of QST.

You should write a book! Or at least a collection of stories about your experiences in various services and locations. Military, dept of state, ham radio...

You could put it on the web, too.....

If you mean John Logie Baird, unfortunately he barked up the wrong (mechanical) tree for too long. But when he got together with Farnsworth things really started to roll.

And yet people still think TV was first demonstrated to the public at the New York World's Fair in 1939.

Whatever happened to World's Fairs, anyway?

I'll keep an eye out, but my point was the difference in focus.
The RSGB Handbook was more narrowly focused. I think it
eventually influenced the ARRL handbook, too.

Note too that the RSGB handbook wasn't a new edition every year, or
even every 2-3 years.

One thing that I think is missing from the ARRL library is a successor
to "Understanding Amateur Radio". "UAR" was a
great book that filled the gap between the basic intro books and the
full Handbook.

Those early '101s sure needed them!

I would not be surprised if imported *parts* were taxed/tariffed/
dutied much less than imported finished
products.

In the back of the RSGB book were ads for outfits that would
sell you complete punched and drilled chassis, panels, brackets, etc.
for various well-known projects like the G2DAF receivers, or would
make up such things to your drawings. Also the Electronique coils,
Jackson Brothers drives and capacitors, etc.

> > Pete Millett's site. All kinds of stuff. There's also Frank's Tube

>
> I'll check that one out.

"Frank's" is actually a collection of sites all over the world. Not
only do they have data for tubes you never even heard of, there are
often multiple data sheets from different manufacturers. So you can
compare the GL-833A from GE with the RCA 833A, for example.

That's The Southgate School way of thinking and doing, right there.
>

YES! I remember now!

There was a smattering of amps with lots of tubes in parallel, aiming
to achieve 50 ohm output impedance.

>� It used six 12JB6's at 500w

Yup.

Less than $200 each, too. Adjusted for inflation, they are cheaper than in the early 1960s when the 3-400Z first appeared.

> It is a sad state of affairs when it won't all fit in two rooms.

Not at all, IMHO!

Sort of. Depends on the family situation, both spouse and kids. Also one's health and ties to the community.

And most of all finances. With people living longer, having kids later and the greater dependence on 401K/IRA funding rather than company pensions and Social Security, retiring at 60, 62 or even 65 isn't nearly so doable as it was in times past.

IMHO the thing to do is to find a good RE attorney and agent, and explain to them *exactly* what you will and will not accept. If they don't "get it" right away, find somebody else.

Realtor.com is a wealth of info, too.

> > The best. Plus to the south are the drumlins and
> > the lakes. Winters
> > are tough but the folks there are used to them.

> I think you mean that they've learned to put up with them.

Not just that; the folks really are used to them.

> Most but "stay putters" have the option. � You needn't
> sell the XYL on an
> antenna farm. � Practice saying things like, "plenty of room for a
> garden" and "park-like setting".

Depends on the XYL. Some will not be interested in the garden or the park-like setting. Others may not want to move away from their connections to the community, or the kids. Or their career.

Of course if the kids move....

> > The first table I built, way back in the early 1970s,

>
> There's an idea for a guy who needs a sturdy but
> inexpensive table for
> the shack. � A couple of local outfits near here have
> so many pallets
> that they are constantly running ads in the local paper
> for "free wooden
> pallets".

The key is the planer. I'd take a pallet apart, carefully checking
that all the nails and staples were out, and then run it through
the planer. Took several passes but the result was square, straight
finished stock. The pieces weren't long but they were long enough,
and I knew how to do splices.

I should get that old table out of storage and put it back to work...

Hi Howard,

Many laptop AC power supplies produce about 16VDC. For Field Day use, I picked up a used laptop of this type for about $380. A coworker (who's a whiz with switching regulators) designed a boost switching regulator that will handle up to about 4.5A load:

http://www.geocities.com/bswadener/temp/Laptop_Power_Supply.pdf It'll maintain the output with as little as 11VDC input. As checked with a spectrum analyzer, it produces no noticeable noise.

73,
Bryan WA7PRC

Funny you should mention it! I've got most of the work done on a memoir of the travels as they relate to amateur radio with just enough of the non-radio events thrown in for flavor.

> You could put it on the web, too.....

Naw, I plan to finance my next rig with the proceeds. There'll be DVD's as well. I'm still in the process of importing the videotaped material, editing and glitzing it up.

>>> advanced and varied stuff. But nothing on operating, history,
>>> licensing, or the RSGB.
>> You can make up for that lack of info if you can
>> find a wonderful book
>> from the 70's called, "The World at Their Fingertips".
>
> I'll keep an eye out, but my point was the difference in focus.

> The RSGB Handbook was more narrowly focused. I think it
> eventually influenced the ARRL handbook, too.
>
> Note too that the RSGB handbook wasn't a new edition every year, or
> even every 2-3 years.

I think that's probably due to the relatively small number of radio
amateurs in the British Isles. As I recall, the RSGB handbook was
nearly thirty dollars in the 70's.

> One thing that I think is missing from the ARRL library is a successor
> to "Understanding Amateur Radio". "UAR" was a
> great book that filled the gap between the basic intro books and the
> full Handbook.

I agree. It was full of information set forth in an easy to follow style.

>>> For example, the phenomenal G2DAF receivers,

>>> particularly the last
>>> version. Incredible sophistication and performance.
>> Really great designs. � He kept at it for a long time. �
>> He provided many
>> mods for commercial rigs like the Yaesu FT-101 series.
>
> Those early '101s sure needed them!

Agreed. The transmitter sections worked pretty well. The receiver
portions needed some help.

>>> Of course part of that was the different economics
>>> of homebrewing in
>>> Europe at the time.
>> ...and that went on through the 70's too. � Taxes on
>> imported equipment
>> were very high throughout most of Europe.
>
> I would not be surprised if imported *parts* were taxed/tariffed/
> dutied much less than imported finished
> products.

You're right. Finland taxed imported transceivers and amplifiers at
100% duty--even into the 80's.

> In the back of the RSGB book were ads for outfits that would
> sell you complete punched and drilled chassis, panels, brackets, etc.
> for various well-known projects like the G2DAF receivers, or would
> make up such things to your drawings. Also the Electronique coils,
> Jackson Brothers drives and capacitors, etc.

As far as I know, Jackson Bros. is still in the business of making
vernier reduction drives--top notch stuff.

>>> Pete Millett's site. All kinds of stuff. There's also Frank's Tube
>>> Data Pages.
>> I'll check that one out.
>
> "Frank's" is actually a collection of sites all over the world. Not
> only do they have data for tubes you never even heard of, there are
> often multiple data sheets from different manufacturers. So you can
> compare the GL-833A from GE with the RCA 833A, for example.

Odd that you mentioned those two. The only 833A I've got sitting around
is an Amperex.

>>>> � I have a 24 hour clock atop
>>>> the amp, one in the computer and one of
>>>> those "atomic clock" things
>>>> hanging on the shack wall.
>>> I have a classic Numechron Tymeter 24 hour
>>> digital clock for the
>>> shack. It was made from parts of three junkers

>>> back in the 1980s and
>>> runs perfectly today. I might have three dollars
>>> invested in it.
>> I used to have one of those and would love
>> to find another. � They're
>> getting rather pricey these days.
>
> Hamfests....

I'm going to make a vow to hit more this year.

>> � I'm happy to report that I have less
>> in my atomic clock than you have in your tymeter. �
>
>> My neighbor bought it
>> new and gave it to me when the outside temperature
>> transmitter quit
>> working. � I found a web site where I can order the
>> transmitter for ten
>> bucks postpaid.
>
> That's The Southgate School way of thinking and doing, right there.

I'm used to it. I once repaired a Heathkit Warrior amp for WA8JOC with
tandem copier transformers which I got for free.

>> P&H's later offering was a low profile, chrome plated
>> until called the P&H Spitfire--the LA-500M.
>
> YES! I remember now!
>
> There was a smattering of amps with lots of tubes in parallel, aiming
> to achieve 50 ohm output impedance.

Yep, relatively low plate voltage and high current jobs. One fellow did
a homebrew amp design which appeared in CQ in the 60's, which used
sixteen horizontal output tubes. Now if a guy wants some oomph for
cheaper, 811A's are a pretty good bargain as are 572B's. With four
811A's making 800 or so watts output, that's an inexpensive way to get
9db more than the typical 100w rig and it is down only about 2.5db from
the legal limit.

>> � It used six 12JB6's at 500w
>> input and was introduced in the early 60's.
>
> Yup.
>
>>> Back in the 1960s the ARRL Handbook had a single 3-1000Z
>>> amp that
>>> still looks good today. In inflation-adjusted dollars it probably
>>> costs less now than it did then.
>> Those bottles are hard to come buy these days. �
>> I think it is hard to

>> beat a pair of 3-500's for legal limit or near legal limit power.
>> They're relatively inexpensive, can be used with or without the air
>> system chimneys and sockets and the graphite anode variants
>> are quite
>> rugged.
>
> Less than $200 each, too. Adjusted for inflation, they are cheaper
> than in the early 1960s when the 3-400Z first appeared.

That's what I mean. Price 3CX800's, 8877's or 3CX1200's and you'll get
an idea of what a bargain the 3-500's are.

>> It is a sad state of affairs when it won't all fit in two rooms.
>
> Not at all, IMHO!

Well, there's likely a move in my future and something's going to have
to go.

>>> Out here near Cameron, it is possible to buy a
>>> perfectly good house for under 30k.

>>> Boy do I want to move! But one has to go where the jobs are.
>> ...right up until retirement time rolls around. � Then you're free to
>> live where you like.
>
> Sort of. Depends on the family situation, both spouse and kids. Also
> one's health and ties to the community.

Pass it along to the kids now: There is an applied implication that
that they travel to visit the parents.

> And most of all finances. With people living longer, having kids later
> and the greater dependence on 401K/IRA funding rather than
> company pensions and Social Security, retiring at 60, 62 or even 65
> isn't nearly so doable as it was in times past.

Right now probably isn't a good time to hang it up so early. Then
again, many people seem to believe that they're going to need the same
amount of money as they now earn in their retirement. The house is apt
to be paid off, they do less driving. They don't have the kids to
support. Many of them don't need as large a house.

>> I've been going through realtors listings for the southern part of
>> this
>> state, getting an idea of what's available and what prices are
>> like--this for our eventual sale of this place to the approaching
>> longwall coal mine. � I'm not bookmarking any homes which are in
>> subdivisions.
>
> IMHO the thing to do is to find a good RE attorney and agent, and
> explain to them *exactly* what you will and will not accept. If they
> don't "get it" right away, find somebody else.

What I've done in the past is to write it up in the offer, "subject to there being no restrictions on the installation of an amateur radio tower/s."

After a couple of false starts with a Cincinnati realtor back in the 70's, I got the agent working with us up to speed on what we wanted in addition to style, size of yard, number of bed and bathrooms: no antenna restrictions and located on high ground. I had trouble with a southern West Virginia realtor before we bought this place. I'd specified "high altitude. She showed me a couple of places with a great view of a hill perhaps 500 feet higher than the house. I might have had to become an Asia specialist.

> Realtor.com is a wealth of info, too.

...and homes.com and a number of other sites I'm presently browsing.

I'm thankful that my XYL and I agree that neither of us wants to be hemmed in by neighbors. She likes vegetable and flower gardening.
I like multiple towers. I'm thinking 3 or 5 or 8 acres. *grin*

Dave K8MN

Amateur Radio Newsline(tm) Report 1597 - March 21, 2008

Amateur Radio Newsline report number 1597 with a release date of Friday, March 21st, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The long awaited Clipperton DXpedition goes Q-R-T after a successful run, California hams are exempt from a new hands free cellphone law and ham radio says goodbye to AMSAT member 2001 with the passing of writer and visionary Arthur C. Clarke. Find out the details on Amateur Radio Newsline(tm) report number 1597 coming your way right now.

BREAKING DX NEWS: - CLIPPERTON A SUCCESS AND NOW QRT

The long awaited Clipperton DXpedition now QRT and everyone involved is calling it a big success. Amateur Radio Newsline's Burt Hicks, WB6MQV, reports.

--

Operations from Clipperton Island ended early on Saturday March 15th. During the tile the team was on this rare D-X-C-C entity, the members had to endure major tropical storms and extreme heat. This took its toll on both the operators and equipment.

Even so, the last report on the operations Web page shows a total of 59,875

QSO's were completed. Of these 28,402 were on CW, 28,736 on SSB and 2,737

made on RTTY.

Heres the post DXpedition information you need to know. First is that you

QSL this operation to N7CQQ, either via the bureau or direct to John Kennon, P.O. Box 31553, Laughlin, Nevada 89028, USA.

Also, for those who use electronic contact verification the logs will be uploaded to the ARRL's Logbook to the World as soon as they have been verified.

For the Amateur Radio Newsline, I'm Burt Hicks, WB6MQV, in Los Angeles.

--

More information is on-line at www.clipperton2008.org (Clipperton Web Page)

BREAKING DX NEWS: GLORIOSO ISLANDS TO ACTIVATE IN MAY

One of the most sought after D-X entities may soon be on the air. This with word that a French group that has been trying to get a permit to activate Glorioso Island for several months has finally received the necessary landing permit.

If all goes well, the five operators hope to bring Glorioso to the ham radio airwaves in early May. Dates being talked about are May 5th to the 9th, but at airtime nothing is cast in concrete. They are currently looking

for sponsors, and if you would like to help please contact F5OGL.

Presently, Glorioso is ranked 4th in "DX Magazine's 2007 Most Wanted Countries World-Wide" in the mixed modes. Once there the team plans to have 3 or 4 stations on the air to help fill the need for QSO with this rather rare location.

The latest updates can be found at the operations website and we will have

more DX news for you later on in this weeks Amateur Radio Newsline report.

**

RADIO LAW: HAMS NOT AFFECTED BY NEW CALIFORNIA CELLPHONE LAW

Amateur Radio has been exempt from California state's new "Hands Free" law. Beginning July 1st California will have new laws on the books to deal with the use of wireless telephones while driving. Some personal radio operators have been asking if the new statute affects them.

According to the California Department of Motor Vehicles, the use of dedicated two-way radios such Citizen Band transceivers, walkie-talkies and the like are not affected by the new ordinance. This, as long as the person behind the wheel is age 18 or older.

More is on-line at the California D-M-V
website: http://www.dmv.ca.gov/cellularphonelaws/dl208_03cell_phone.pdf

CHANGING OF THE GUARD: COMMUNICATIONS VISIONARY ARTHUR C. CLARKE - S.K AT AGE 90

The changing of the guard continues. This with word that British science fiction writer, communications futurist and friend of Amateur Radio, Arthur C Clarke, has died in Sri Lanka at the age of 90.

According to news reports, Clarke passed away the morning of March 18, 2008, after suffering from breathing problems. While not a radio amateur, Arthur C. Clarke had some strong albeit unofficial ties to the world-wide ham radio space community. For years he held the honorary AMSAT membership number 2001.

As an author and visionary, Clarke's most famous prediction was his proposal of geostationary satellites for communications published in the Wireless World magazine in 1945. While this proposal was not taken seriously at the time, his orbital dream became a reality about two decades later with the launch in 1965 the first commercial geostationary communication satellite Intelsat One also known as Early Bird. In this audio clip from a 1992 interview with the late Roy Neal, K6DUE, Clarke told hams listening to a teleconference radio net how the idea came about:

--

Clarke: "At the time I was working on a very complex RADAR. It was the first Ground Approach Control flight management system which has about a thousand valves or what you call tubes. At least one would blow out every day , so I couldn't imagine that sort of equipment operating without mechanics on the spot to change them and give it service. So I assumed that these relay stations would be manned space stations, like the Freedom Space Station but at a lower altitude."

"What I didn't envision was the incredible revolution in solid state electronics: First the transistor and later the micro-chip. And I have sometimes said though not very seriously that the invention of the transistor was a major catastrophe for astronautics because if we hadn't invented the transistor we would have had to build manned space stations and we would have been half way to Mars by now (giggle)."

--

For his effort, the geostationary satellite orbit known as the Clarke Belt was named in his honor. And while he had moved away from the United Kingdom years ago, in 1988 was knighted by England's Queen Elizabeth.

As a writer Clarke was the author, or co-author, of dozens of fiction and non-fiction books. He will likely be best remembered for his novel 2001: A Space Odyssey. This book was later turned into a landmark big screen motion picture by Clarke and director Stanley Kubrick. His other well known works include the sequel 2010 that also became a motion picture and the books Childhood's End and Rendezvous with Rama. In all, Arthur C. Clarke has penned some 33 novels and another 29 non-fiction books and stories from the time he began writing them in 1950. His latest titled "Firstborn" was published in 2007.

Once called the first dweller in the electronic cottage, Arthur C. Clarke's vision of space travel and computing captured the imagination of readers worldwide long before any of it came to pass. He lived to see much of what he predicted become reality during his lifetime.

Arthur C. Clarke, visionary, writer and longtime friend of radio amateurs word wide, dead at age 90. (ARNewsline(tm), published reports)

BREAKING NEWS: REMAINS OF MISSING INDIANA HAM BELIEVED FOUND

Some breaking news. Plainfield, Indiana, police said they may have found the body of a ham radio operator missing for more than two years.   This as authorities discover the vehicle belonging to Harold Hensley, AB9JD, with a person inside of it in a retention pond close to his home.

According to news reports Hensley was last seen leaving his residence in January of 2006. At that time his wife told authorities that her husband was on his normal routine and he was supposed to be at work at 7 a.m.. His employer called at 7:30 and said he had not shown up. He has not been seen since.

The biggest break in the case came just five blocks from the Hensley's home. Police said a tip early in the investigation brought them to a BP Gas Station. They said its where someone saw Hensley the day he went missing. Finally on Monday afternoon March 17th investigators found Hensley's jeep and what they believe to be his human remains in the pond only about 5 blocks from his home. Detectives are waiting for autopsy results to confirm his identity and the exact cause of death. (Published news reports)

**.

ENFORCEMENT: $13000 ASSESSED FOR TOWER VIOLATIONS

The FCC Enforcement Bureau has finalized a fine of $15,200 against Pembrook Pines Elmira Ltd., which owns AM stations WEHH and WELM in the state of New York. The commission said the owner had failed to comply with antenna structure lighting requirements, notify the FAA of an antenna structure light outage or operate its stations consistent with the modes and power authorized in their licenses.

The Buffalo Field Office had originally issued a Notice of Apparent Liability of $19,000 early last year. The company didn't dispute the findings but asked for a reduction because the FCC previously had not treated failure to notify the FAA as a separate violation and because the station had a history of compliance.

The commission rejected the first argument, saying that it believe that it is appropriate, and consistent with precedent, to assess an additional $3,000 forfeiture where there is evidence that the tower owner knew of a light outage prior to the inspection by FCC agents and failed to notify the FAA. But it accepted the second ongoing full compliance issue and cut the fine by $3,800. (FCC)

**

REPEATER NEWS: NEW UK 10 GHZ SYSTEM COMES ON THE AIR

What is believed to be the first 10 GHz F-M voice repeater in the United Kingdom came on the air on March 14th, GB3TC t is co-sited with GB3CS at Berryhill Farm in Lanarkshire. The new system operate on a channel pair of

10371.1 MHz in and 10471.1 MHz out and requires a 103.5 Hz sub audible or 1750 Hz burst access tone.

Beacons in FM with call and locator every 60s when not repeating. The output of the repeater is in the Amateur Satellite segment as its planners

believe it could provide a useful signal source for setting-up weak signal

equipment.

The project is being independently operated and funded by local radio amateurs with support from the Central Scotland FM Group and its technical

team. Together with the GB3CSB beacon project for the 23, 13 and 9cm bands

the new repeater is designed to stimulate activity on these higher frequency bands.

More information is on-line at http://www.csfmg.com/GB3TC.htm (Southgate)

**

D-STAR NEWS: D-STAR TO COME TO LONDON

Still in the U-K, the city often called the gateway to Europe -- London, England, will soon have its first ever D-Star repeater. The Radio Society

of Great Britain's Emerging Technology Co-ordination Committee website says

that the GB3OK repeater at Bromley in Kent has applied to become GB7OK and

convert to D-Star technology. This is the latest application and the first

from the London area for this amateur digital mode which has been gathering

considerable interest since last year.   (Southgate)

**

HAM RADIO IN THE SPOTLIGHT: THAT NEW MOUNTAIN DEW COMMERCIAL

Ham radio is portrayed in a strange but fun way in a new commercial for the soft drink Diet Mountain Dew. Actually the spot is a kind of battle of the sexes with the claim being that lightning hits men more often then it does women. In it, you see a bunch of Y-L's involved variety of activities that experts say should not be attempted in a thunder storm. This includes fencing and operating a ham radio station Field Day style as lightning flashes and thunder roars.

We won't spoil the outcome of this adventure for you by describing what happens next. We do however wonder if the producers went to eBay to get their props because they sure have some magnificent vintage tube type gear for their Y-L ham to use. You can see the commercial on-line of YouTube at http://www.youtube.com/watch?v=MieEfkwICB8 (ARNewsline(tm))

**

HAMVENTION 2008: ROAD CONSTRUCTION NEAR THE HARA ARENA

If you are planning to attend the 2008 Dayton Hamvention, you will need to give yourself a little more driving time than in years past. This due to several road and street construction projects that will be ongoing in the area.

The first problem is construction is at the north end of the downtown Dayton area on Interstate 75 from about Mile Marker 53 to 56. Rob Lunsford KB8UEY, who is the Hamvention's Talk-In Committee Chairman says that the Ohio Department of Transportation has started a multi-year multi-phase reconstruction of I-75 in which there are lane restrictions, bridge replacements, and various other adjacent projects.

The other traffic pinch involves one of the main surface streets used by attendees of Hamvention. Needmore Road it is almost a straight shot from exit 58 on I-75 to Hara Arena. Unfortunately for Hamvention goers a rebuild project is set to begin on this roadway and it will be down to one lane each way for no less than 100 working days. If you look at a calendar, that includes Hamvention weekend.

Lunsford says that these repairs are long overdue and there are work-arounds for those driving to both the Hara Arena and the event parking at the nearby Salem Mall. We suggest that you go to www dot hamvention dot org in coming days to find the alternate route that best serves you. (Hamvention(tm))

**

NAMES IN THE NEWS: THE FIRST FEMALE VK HAM HIGHLIGHTED ON RADIO SHOW

Some names in the news. We begin with the story of the first Australian YL ham that is being told on the program Hindsight on Australian Radio National. It's the tale of Florence Violet McKenzie, affectionately known as Mrs Mac. And who was also the first qualified female electrical engineer in Australia. In preparation of the program several current Australian female hams were interviewed. The audio can be downloaded from http://mpegmedia.abc.net.au/rn/podcast/current/audioonly/hht_20080316.mp3 It's a 25 megabyte MP3 audio file. Go to home page of ABC Radio National's "Hindsight" program, www.abc.net.au/rn/hindsight/ Scroll down to the program date Sunday 16 March 2008), and there it is. (WIA News)

**

NAMES IN THE NEWS: UK CLUB GETS GRANT TO EDUCATE

The Worcester Radio Amateurs Association is celebrating after being given �5,320 from the United Kingdom National Lottery Awards for All scheme. The group says that it will use the funds to expand its educational services into neighboring towns and to the training to people outside the club o as to bring Amateur Radio into more schools.

The Worcester Radio Amateurs Association established in October 2006. It is the only Amateur Radio organization in the Worcestershire area. As well as holding regular meetings, the club works closely with the Scouts and Guides, teaching youngsters how to use radio communication while camping. (Southgate)

**

SOCIAL SCENE: RCA SPRING GATHERING IN ALBUQUERQUE NM APRIL 1ST

The fifth annual Radio Club of America Spring Gathering will be held Tuesday, April 1st in the Sierra Room of the Hyatt Regency Hotel in Albuquerque, New Mexico. The cocktail hour, with a cash bar opens at 6:00 p.m. Dinner will follow dinner at 7:00.

Alan Tilles, will be the guest speaker. He is the counsel to numerous land mobile licensees, trade associations and manufacturers. Tilles is expected to provide an update on rebanding, including a discussion of challenges and opportunities for licensees.

This event is by reservation only. For more information contact Mercy Contreras by e-mail to mercycontreras at comcast dot net. (RCA)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RADIO BUSINESS: T-MOBILE OUT - STARBUCKS TEAMS WITH ATT FOR WIFI

Beginning this spring Starbucks Coffee Shops and AT&T Inc. will begin offering a mix of free and paid wireless Internet service in most of the international coffee retailer's U.S. shops. Starbucks said it will give customers who use a Starbucks card two hours of free wireless access per day. Also, nearly all of AT&T's broadband Internet customers, about 12 million, will automatically have unlimited free Wi-Fi access at Starbucks. The deal boosts the number of AT&T hotspots in the U.S. to 17,000. (RW)

**

HAM RADIO IN SPACE: AO-16 VOICE MODE STILL AVAILABLE

The aging Amsat Oscar 16 ham satellite is still open for voice operation, but that could change in the coming weeks. AO-16 has been in full sunlight with no eclipse periods at all for several months but short eclipse periods will begin at the end of March. These will increase steadily until early July at which point the eclipse periods will reach about 26 minutes each orbit. Its unknown how its batteries will fare once this happens. Controllers say that they will simply have to keep an eye on the perimeters and issue updates as warranted. Meantime the S-band beacon is not operational and the exact status of the S-band transmitter remains unknown. (ANS)

**

HAM RADIO IN SPACE: SPEAKERS WANTED FOR 2008 AMSAT UK COLLOQUIM

The first call for speakers for the 22nd Amsat-UK Colloquium has gone out.

The dates are from Friday 25th July to Sunday 27th July 2007. As in years

past, the venue is the Surrey University, at Guildford, Surrey, in the U.K.

Offers of talks should be submitted as soon as possible. The final date for full documents to be received is late June in order that the "Proceedings" document be available to participants. Details of this and previous colloquium gatherings can be found at http://www.uk.amsat.org/content/view/32/42/   (AMSAT - UK)

**

WORLDBEAT - NEW ZEALAND: NEW DOT POST DOMAIN ON ITS WAY

A new domain for e-mail has been proposed. Jim Meachen, ZL2BHF, reports from down under:

--

A new "dot post" Internet domain in the works that hopes to set apart the

electronic services increasingly offered by postal agencies around the world. The Internet's key oversight agency, the Internet Corporation for Assigned Names and Numbers, is trying to work out terms for the suffix with

the U.N. Universal Postal Union. Backers say restricting the "dot post" name to postal agencies or groups that provide postal services would instill trust in Web sites using such names. By contrast, popular suffixes

such as ".com" and ".org" are assigned on a first-come, first-served basis.

Im Jim Meachen, ZL2BHF.

WORLDBEAT - SOUTH AFRICA: NEW 2 METER BEACON SYSTEM ON THE AIR

South Africa now has a 2 meter beacon project initiated by John Sygo, ZS6JON, now has four beacons on the air, with a number of others set to go

live very soon. All operate in the spectrum between 144.4 to 144.5 MHz with systems on the air in the cities of Cape Town, Bloemfontein and Durban. The keyers were donated by ZS6EF. The output of the beacons varies

between 10 and 20 watts. (Southgate)

**

CONTEST CORNER: THE IRISH 2 METER CONTEST

And if you think that radio sports is just for the High Frequency bands, better not tell that to the hams in Erin's isle. That's because the Irish

Radio Transmitters Society's 2 Meter Counties Contest will take place on Monday March the 24th from 2 to 4 p.m. local time.

The basic idea is for clubs and individuals to take part by activating some

of Irelands rarer counties. Full rules are available on the IRTS web site. Its in cyberspace at www.irts.ie. (IRTS)

**

DX

In DX, word that DL1BDF, plans to become active from Egypt as SU0ARA on all bands through March 19th. He also hopes to get a special permission for 80 meters because this band is usually not permitted for amateur radio. QSLs via SU1KM.

K4QD and AF4Z will be active portable HH4 from the Northwest Haiti Christian Mission between March 24th and April 4th. They will operate 80 through 10 meters on CW, SSB and RTTY, but only as time permits. QSL via their home callsigns preferably using the ARRL's Logbook to the World QSO confirmation service.

SP2JMB, will be active portable 3B9 from Rodrigues Island and then from Mauritius Island portable 3B8. This, from April 1st through the 8th. His

activity will be mainly on C-W with QSL's going to his call book address.

A team of German operators will be active from Nouakchott in Mauritania through March 30th. No callsigns were provided but they do plan to operate

the CQ World SSB contest on March 29th and 30th as a multi entry. QSL via

DH7WW, direct or by the DARC bureau.

Lastly, listen out for Senegal as a Swedish team of operators become active

as 6V7I between April 6-12th. The group plans to have two stations on 160 through 10 meters operating CW and SSB, with monoband yagis and verticals.

QSL via SM7DXQ.

(From various DX news sources)

THAT FINAL ITEM: ACCOLADES TO TONY

And finally this week, word that an Australian ham has been honored by NASA. This for his dedication to the educational side of manned ham radio

operations from pace. WIA newsman Jim Linton, VK3PC, tells us about the work of Tony Hutchison VK5ZAI:

--

Known around the world for his involvement in facilitating amateur radio communications with orbiting space stations is Tony Hutchison VK5ZAI, who has just received a well deserved achievement award.

Tony is the Australian coordinator of the Amateur Radio on the International Space Station (ARISS) project is now the proud but humble recipient of a Group Achievement Award from NASA's Lyndon B. Johnson Space

Centre in Houston Texas.

The citation on the award certificate is �For providing sustained outstanding engineering support which has resulted in a record number of successful ISS amateur radio contacts', and signed by the Johnson Space Centre Director, Michael Coats.

Tony VK5ZAI has for more than 15 years given many schools and groups the opportunity to talk with space station crew. A notable occasion was the Australian Scout Jamboree in January 2007 as part of the world scouting movement's centenary.

His involvement began in 1993 by assisted South Australia's Loxton High School students talk with Cosmonaut Alex Serabrov on the MIR space station.

In 1998 Tony handled most of the communications between Australian-born Astronaut Andy Thomas VK5MIR and his family during his flight on MIR.

Soon after he was invited to be one of nine-approved ARISS telebridge stations and began handling most of the private family contacts for the first three crews on the International Space Station, along with school contacts.

Tony has been involved in linking with school in many countries, and the development of IRLP and Echolink for ARISS contacts, plus the design of interface units used for ARISS telebridge contacts in Australia and Europe.

I'm Jim Linton VK3PC reporting for the Amateur Radio Newsline.

--

Tony's enthusiasm and dedication, motivated by a personal desire to put something back into amateur radio, makes him well deserving of NASA accolade. (WIA News)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,
Arcadia, California 91066.

Before we go we want to remind you that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year is now open. Any licensed radio amateur age 18 or younger residing in the United States or Canada is eligible for the award. Full details and both downloadable and on-line nominating forms are in cyberspace at www dot YHOTY dot org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Fred Vobbe, W8HDU, saying 73 from Lima, Ohio, and we thank you for listening.

Amateur Radio Newsline(tm) is Copyright 2008. All rights reserved.

Most base-type radios, especially HF radios, have keyer circuitry built in. On those radios where it has been optional (Icom 970, e.g.), it has been a fairly expensive option. Can anyone estimate the amount that it adds to the price of an HF radio? What would we save if it were left off? Considering the ever shrinking role of Morse, does it really make sense to insist that all HF radios include it? It almost seems as if the various manufacturers are afraid to go first in making it an option. It seems like it is more of an ideological issue than a practical one.

I'm not so sure. It's probably more cost effective in the long run to include it rather than not, if you make it an addon option then it complicates matters. Look at the myriad options you get when buying a new car - do you want aircon, electric windows, spotlights, etc. etc.

I remember 10 years or so ago when Icom here in the UK sold off a load of unsold commercial UHF transceivers onto the amateur market (the IC-U101 if anyone remembers it, still have one somewhere, it made a great packet radio rig..!) - as a commercial radio, it came with built in CTCSS (PL) tone encode/decode but for some reason best known to themselves Icom physically removed the tone boards from the radios before selling them to amateurs.

I suppose they thought they could make extra money selling the tone boards as "optional extras" (or am I being an old cynic..?!)

First, the IC-970 wasn't an HF rig, so far as I remember. Also, Icom accessories have always been terribly over-priced (priced a CT-17 lately?), so what they charged for a keyer module is no reflection on its actual cost. Further, designing and packaging a keyer as an optional plug-in module, and designing a radio so that it can accept such a plug-in, probably increases the cost of both more the cost of a standard built-in keyer.

These days, the cost of the few additional parts needed to implement a keyer (or the few additional lines of code in the firmware) is lost in the noise of a retail price of $2000 for a full-featured HF rig. The cost of the key jack probably equals the cost of the keyer.

And, I question your assertion of the "shrinking role of Morse" anyway; I think you're the one with an ideological issue.

```

My guess is that the actual bill-of-materials needed to include a basic keyer into the design of a new transceiver design is no more than $5, and quite possibly less.

Assuming that the transceiver has a jack for a straight key, you can add a basic iambic keyer with nothing more than a second jack, a very small microcontroller (e.g. a PIC costing a dollar at most) and some wiring.

In transceivers that are already microprocessor-controlled (which is most of the new ones, I think) the iambic-keyer and memory functions can be rolled into the code of the existing micro... so all you really need to add is a jack, wiring, and the additional programming logic.

So, the incremental cost of adding one should be quite small.

Keyers with a much larger memory, beaconing functions, etc. might require more hardware... but these days you can pack a *lot* of code and memory into a tiny little 6- or 8-pin surface-mount microcontroller.

That's because hardware is involved when it's made an option. The basic logic of a keyer, even the fancy iambic ones, is pretty simple.

> Can anyone estimate the amount
> that it adds to the price of an HF radio?
> What would we save if it were
> left off?

In most rigs with built-in keyers, the keyer circuitry is nothing more than the paddle inputs. The actual implementation is in software, and the savings (if any) would be small, if any. Couple of dollars at most.

> Considering the ever shrinking role of Morse, does it really
> make sense to insist that all HF radios include it?

I disagree that the role of Morse is "ever shrinking" on the amateur HF bands.
Judging by the use of the mode in contests, DXpeditions, QRP, homebrew projects and the sale of paddles and Morse-only HF rigs, the mode's

role
in amateur radio hasn't really changed.

> It almost seems as
> if the various manufacturers are afraid to go first in making it an
> option.

Why should they make it an option, given that it costs almost
nothing to include? Leaving it out would probably hurt sales to the
point
of negative return.

> It seems like it is more of an ideological issue than a
> practical one.

Not at all.

The "ideology" of most current HF amateur rig designs is to include as
many features as
possible, particularly if those features can be implemented in
software. So we have rigs
with lots of memories, multiple VFOs, lots of selectivity/AGC/NB
choices, lots of computer-control features, real-time clocks, data
mode encoding and decoding, and much more - all in software, not
hardware. They add very little to the
cost of the rig, and nothing to its basic-radio performance numbers,
but hams seem to like them.

>From the standpoint of the manufacturers, it would not be practical to
remove a feature most customers have come to expect, whether they use
it much or not.

I am a medievil reenactor but I know the guys

the Civil war folks are the most well anal authetntic colthes but at
least Feamle reinactor are cicvies and I think I know some male one

I suspect you ask a CW guy about the sounder he will says it is to be
period but you preseverse and people wil relent to reality

round here some suport the Ft Walkins sp park reinactor they used our
current statrd morse with some hams using fairly authentic copies

if you want and remmebr in apr drop me a Line and I send it our to
thos eguys (they are snow birds and not here right now

Perhaps a sample could be on the web, such as how Amazon lets you see
a small part of a book.

> > If you mean John Logie Baird, unfortunately he barked up the > > wrong

It was theoretically correct, but impractical for "high definition" TV
in real time.

But the market wasn't just the UK. I suspect the Commonwealth
countries, both current and former, would be a market. Aussies,
Zedders, etc.

> As I recall, the RSGB handbook
> was nearly thirty dollars in the 70's.

The one I have is earlier, and I think it worked out to about $13-15
or so - back when an ARRL Handbook was $4. Plus you probably

had to pay postage, duty, etc.

Having bought "real" engineering books, I can say that both the ARRL
and RSGB Handbooks were and are true bargains.

The ARRL Handbook back then was mostly the work of W1DX,
aided by the staff. The book evolved over time - the whole book
was not rewritten every year.

The RSGB Handbook had many authors, and underwent serious
expansion and revision between editions. Since there was not
a set schedule for when the next edition would come out, the
changes were much greater.

Friend of mine is trying to collect all the post-WW2 Handbooks,
and has most of them. He has all the post-WW1 QSTs, in part because an
OT gave him a lifetime collection, knowing he would appreciate and
care for them.

The Southgate Library keeps expanding, too. What you see in the shack
picture is but a small part of it. Then there's the stuff I have
in electronic format...

Both theory and practice, code and voice, HF and VHF.
Half the price of a Handbook.

Yes, but not as top-notch as BC-221, LM or ARC-5 drive/capacitor
combinations.

> Odd that you mentioned those two. � The only 833A I've
> got sitting around is an Amperex.

I used to have an RCA 833A, but it got sold. I have some
experience with them, but not as much as with the more-common
"ham" amplifier tubes.

> sixteen horizontal output tubes. �

The most I ever saw was a picture in QST of a 75 meter monoband amp
with something like thirty-six 1625s in parallel. Output impedance was
75 ohms; fed the antenna through a lowpass filter. Of course the
output C was so enormous it couldn't go any higher, and IIRC there was
quite a pile of bias pots.

> Now if a guy wants some

> the legal limit.

Yep. But with four 811As you often need to neutralize even in GG, and depending on where you get your bottles a pair of 572Bs may be the better deal.

The solid-state option has been around for decades, but the high cost stops a lot of hams.

In April 1976, a legal-limit solid-state all-band HF linear amp was the cover article in QST. If someone had told me then that in 2008 there would be more models of tube-type linear amps being made for hams than in 1976, and that hams would be buying and using them, I'd have not believed it.

(3-500Z tubes)

> > Less than $200 each, too. Adjusted for inflation,

> you'll get
> an idea of what a bargain the 3-500's are.

Those ceramic-metal tubes were never inexpensive in the first place.

Unlike almost all commercial/military applications, in ham radio, when an expensive final tube fails, it's up to the owner/operator to pay for the replacement.

> Well, there's likely a move in my future and something's going to > have to go.

(sigh)

> > Depends on the family situation, both spouse and kids. Also
> > one's health and ties to the community.
>
> Pass it along to the kids now: � There is an applied implication that
> that they travel to visit the parents.
>

That's good advice in theory but in practice it often works out to be more complicated. Traveling with little kids is both expensive and difficult, and in families with two careers just getting everyone off work and out of school at the same time can be a challenge. (Vacation and sick days are often used up when the kids are sick, and there's never spare cash laying around. So it's often more practical for Grandma/Grandpa to travel.

Still, all that means is you draw distance circles around where the kids are. Doesn't mean you have to live down the street.

> > And most of all finances. With people living longer, having kids > > lat

Agreed, and there are tax advantages, such as getting double
exemptions after 65, the capital-gains exclusion for selling the
big house, the lack of tax on SS after age 70, etc.

OTOH things like health care costs, rising energy prices, etc.,
work the other way.

bwaahaahaa

But a good example of the problem, and the need to get the
RE attorney and realtor to understand *exactly* what you
will accept.

> > Realtor.com is a wealth of info, too.
>

> ...and homes.com and a number of other sites I'm presently

Good.

You have the most important resource, too: Flexibility. You don't have to move this month, or this summer, or land in a specific school district or some such.

>
> I'm thankful that my XYL and I agree that neither of us wants to be

Works for me!

> � I'm thinking 3 or 5 or 8 acres. *grin*
>

Think big, think flexible. Could you subdivide some acres for other homes? Lease for farming?

One thing that was/is popular in WNY is to have a woodlot. Usually a piece of land that is heavily wooded, had no utilities and won't pass the perc test.

The owner cuts a couple of cords of wood every year, sells some, uses the rest for heat. The profit on the wood sold pays the RE taxes. Only the crowded and not-so-good trees are taken; the really good ones are left to grow and given room.

Of course you have to love to cut, split and stack wood, but a lot of us do.

"Wood warms you twice - once when you cut it, again when you burn it"

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group every month. You are now reading the first article, which explains what rec.radio.info is, and answers some Frequently Asked Questions. The second article is titled Posting Guidelines, and you only need to read it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the next " -- " string. The sections available are:

- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet community with a resource for information, news, and facts about any and all things radio.

All the other rec.radio groups are intended for discussions and general chit chat about radio. Rec.radio.info will contain informational, factual articles only. Follow-ups are redirected to an appropriate other group, and further discussion (if any) will not take place in rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

```
/Newsgroups:.*[ ,]rec\.radio\.info/h:j
```

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

```
rec.radio.info:!s/:^
```

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

```
sequence
rec.radio.info
rec.radio.
```

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

In slrn, according to the srln FAQ, the following scoring rule will allow you to see rec.radio.info-crossposted bulletins, while still filtering out most SPAM or "Velveeta" crossposted to more than 2 newsgroups (as such articles usually do not contain a 'Followup-To:' header):

```
Score: -9999
        Newsgroups: ,.*,
        ~Followup-To: .
```

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for

rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

>
> Is this a common situation? I hadn't heard of a formal requirement until it was mentioned on the other forum, but a couple more people came forward and said that it was in place in their area. Is it happening in your area?

Not that I know of.

> Do you think it's a good idea?

I wouldn't mind having a job that required me to be a ham, but being required to have a ham license in addition to being trained for some other field does, as others have pointed out, risk degrading the quality of applicant.

I think what the emcomm managers _really_ want is a commercially licensed emergency radio technician and communicator, but there's no license for that. The problem with requiring a ham license is that there's so much variability in the training and currency of hams, not to mention their physical condition, that I don't think that having a ham license is a reliable indicator of emcomm proficiency.

After all, _any_ municipal employee can be trained to operate a two-way radio: what's required in an emergency is guys that can operate the radio _and_ put up the antenna _and_ figure out which rigs can share a power supply _and_ figure out which existing antennas are "close enough" for the frequency needed _and_ get a CD-badged Gooneybox to communicate

with an FM radio. Long story short, I think requiring a ham license
involves an assumption that anyone with a license knows how to operate
and improvise in an emergency, and that's not true.

FWIW. YMMV.

73, Bill W1AC

Even with that, most buildings shake a little due to machinery, HVAC, etc, and in the end, a projector mounted that way would be a problem.

Oh yeah. I enjoy the look, and even went for it in a small way with some tube equipment I bought a few years ago.

<some snippage>

> Dressing up modern technology to look as if it is powered by steam,
> strikes me as more than a tad silly.

Absolutely! This aesthetic is in no way saying "look at me! I'm serious art!" I would go a little further to state that some examples of the genre are downright ridiculous - by design. Interviews with the creators usually show them to have a great sense of humor, and that they enjoy pulling our legs at times. But they want everyone in on the joke.

That being said, there are examples of great beauty in there, on the workshop page, the telegraph sounder was gorgeous, and the pick guard on the Stratocaster is beautiful.

There is actually some of this aesthetic running about in Amateur radio, even if we don't notice it.

Like keys for instance

Just look at say Begali keys. What workmanship and quality! These things are true art. Other keys are gorgeous too. Even my modest Bencher has an attractive look to it.

But most of that stuff isn't really needed. Certainly the Begali keys are playfully experimental in nature, and the gold plating isn't really needed, it's there for aesthetics.

And yet, I could go out to the garage, and make a serviceable paddle with a piece of 2 by 4 and some springy metal.

Nominating Period Open For 2008 Amateur Radio Newsline Young Ham Of the Year Award

Los Angeles, CA. (March 1, 2008) - If you know a young radio amateur age 18 or younger who has done something very special in the Amateur Radio hobby, this is the time to consider nominating him or her for the 2008 Amateur Radio Newsline Young Ham of the Year Award.

HOW THE YHOTY AWARD WORKS

The "Young Ham of the Year Award" is presented annually to a licensed Radio Amateur (Ham) who is 18 years of age or younger, is a resident of the 50 United States, Canada provinces or Puerto Rico, and who has provided outstanding service to the nation, the community or the betterment of the state of the art in communications through the Amateur Radio hobby/service.

All nominations must be received by May 30 of any given calendar year on an official application and accompanied by verification materials. Applications forms are available for a self addressed stamped envelope mailed to the Young Ham of the Year Award c/o Newsline, 28197 Robin Avenue Santa Clarita California 91350. These nominating applications are also available for electronic download or on-line submission from our special award website at http://www.yhoty.org

WHOM TO NOMINATE

Here are some of the things you should be thinking about it in a nominee. First off, as noted above, the nominee must be age 18 or younger and a resident of the United States, Canada or Puerto Rico. He or she must hold a valid Amateur service license issued by the United States FCC or Canadian telecommunications regulator Industry Canada.

Also, your nominee should be someone who has done something outstanding as an Amateur Radio operator. Perhaps it was something special he or she did for his community through the Amateur service. Maybe it was some outstanding achievement that led to an improvement in amateur radio in his or her area. Or perhaps he or she was successful in recruiting a lot of new hams. Whatever it was or is, we want to hear about it.

If you're looking at what makes a good candidate, we suggest you check out our special Young Ham of the Year website at www.yhoty.org and look at the credentials of past award winners.

HOW TO FILE A NOMINATION

Printable nominating forms and an on-line click-to-send form are available at www.yhoty.org. It's very important that you, as a nominator, fill out the on-line or downloadable and printable application as required. If you're sending it by way of the regular mail, please make sure it reaches us at Amateur Radio Newsline by May 30 2008. That's the deadline for all applications.

In addition, we need as much documentation as you can give us so the committee can carefully evaluate each nominee. When we say documentation, we are talking about letters, e-mails, magazine articles, videos and other kinds of endorsements that would accompany the application. In the past, we've even had photos e-mailed in with some of the applications.

THE AWARD PRESENTATION

As in years past, the 2008 Young Ham of the Year will receive an expense paid trip to the Huntsville Hamfest in Alabama and a gift of Amateur Radio gear compliments of Vertex-Standard Corporation. Those are the folks who manufacture the famed Yaesu line of ham radio gear. And from our other primary corporate sponsor -- CQ Magazine -- the winner gets a week at Spacecamp Huntsville, where he or she can learn first-hand about man's conquest of the final frontier.

But none of this can happen without you. Now is the time to get on line, go to www.yhoty.org and fill out that on-line nominating form or download a nominating form, print it and send it in. Either way, you and some worthy young ham will be glad that you did.

SOME BACKGROUND ON THE PRIMARY AWARD SPONSORS

The Young Ham of the Year Award program was created in 1986 by Bill Pasternak, (WA6ITF) and is sponsored by the Amateur Radio Newsline, Inc.. Better known as "ARNewsline" it is the world's largest not for profit (501(c)(3)) and totally independent ham radio broadcast news and data information service. It was organized in 1976 as the Westlink Radio Network by Jim Hendershot (WA6VQP), and Bill Pasternak (WA6ITF). Since that time it has produced and aired over 1538 consecutive weeks of free news bulletin programming dealing with Amateur Radio and related personal communications issues.

Primary corporate underwriting since the inception of the "Young Ham of the Year Award" program is supplied by Vertex-Standard Corporation (Yaesu U.S.A.) and CQ Magazine. Vertex-Standard is a world leader in the design, manufacture and distribution of Yaesu brand high quality Amateur Radio and Vertex brand commercial two-way radio equipment.

As of 1995, CQ Publishing has been an additional corporate underwriter. CQ Magazine and its sister publications are owned by CQ Communications and are considered the trend-setting publications serving today's modern radio amateur.

Past recipients of the Young Ham of the Year award include:

Shawn Alan Wakefield, WK5P, of Bartlesville, Oklahoma (1986)
David Rosenman, KA9PMK, of Muncie, Indiana (1987)
Jonathan Binstock, NK3D, of Potomac, Maryland (1988)
Erin McGinnis, KAOWTE, of Topeka, Kansas (1989)
Mary Alestra, KB2IGG, of Staten Island, New York (1990)
Richard S. "Sammy" Garrett, AAOCR, of St. Louis, Missouri (1991)
Angela (Angie) Fischer, KBOHXY, of St. Louis, Missouri (1992)
Kevin Boudreaux, N5XMH, of New Orleans, Louisiana (1993)
Allison Zettwoch, KD4CKP, of Louisville, Kentucky (1994)
Adam Weyhaupt, N9MEZ, of Alton, Illinois (1995)
Toby Metz, KB7UIM, of Boise, Idaho (1996)
Brian Mileshosky, N5ZGT, of Albuquerque New Mexico (1997)
Richard Paczkowski, Jr., KF4BIA, of Edgewater Florida (1998)
Michelle Swann, KE4EZI, of Warner-Robins, GA (1999)
Christopher Arthur, KT4XA, of Russellville, AL (2000)
Patrick Clark, KC8BFD, of Charleston W. VA. (2001)
Josh Abramowicz, KB3GWY, of Reading PA (2002)
Jay Thompson, W6JAY, of Santa Ana CA (2003)
Andrea Hartlage, KB4IUM, of Grayson GA (2004)
Rebekah Dorff, WG4Y, of Birmingham AL (2005)
Catherine Ferry, NC8F, of Silver Lake, OH (2006)
Grant Morine, W4GHM, of Wilmington N.C. (2007)

ABOUT THE UNITED STATES AMATEUR RADIO SERVICE

The United States Amateur Radio service is force of over a 600,000 publicly spirited personal radio operators who are licensed and regulated by the Federal Communications Commission. They provide the nation with a pool of trained radio operators and technicians to assist the United States in improving international relations. They are also available as a voluntary group of skilled public service-oriented individuals with their own radio equipment who are available to provide emergency communications in times of disaster. In the moments immediately following the 911 terror attacks, Amateur Radio volunteers became the first-response communicators in New York City after a major portion of that city's radio system was destroyed. Hams also provided life-saving communications along the U.S. Gulf Coast during and after Hurricane Katrina made landfall in 2005.

Bingo! What has happened over the years is that radio communications skills have been marginalized to such an extent that they overdid it. The skill set that Hams bring to the emergency used to be shared by professional radio ops. But the powers that be wanted highly simplified systems that required no more electrical acumen than turning the radio on and mashing the PTT button ended up meanining that no one knew much about radio, and therefore needed someone who did to help.

Ask an Emcomm manager if they would rather have the "unpaid volunteer" Ham or someone who actually worked for them doing comms, and I would be surprised if anyone would prefer the Ham.

Maybe. Another wire, mounted diagonally from the rear would have done away with most of the pendulum action. If you're worried about buildings shaking, even a steel mounted would have such vibrations transfered to the projector. The wires might have even damped those types of motion.

Some guys like Picasso. Some like Wyeth. If you liked the Bencher,
you'd love the FYO keyer it is based on. Either a metal like brass or
nickel is needed or some sort of plating is necessary to keep the metal
from corroding/rusting.

> But most of that stuff isn't really needed. Certainly the Begali keys
> are playfully experimental in nature, and the gold plating isn't really
> needed, it's there for aesthetics.

Some kind of plating or paint is needed and it isn't practical to paint
things like the threads of screws. Key's aren't designed to look as if
they're steam powered.

>   And yet, I could go out to the garage, and make a serviceable paddle

I think we could all agree that such a contraption would be ugly in the
eyes of most. Additionally, it wouldn't be likely to work very well.

Agreed. Also the rare PRO-310.

I find it impressive that Hallicrafters made so many different
receiver models in so few years (say, 1945-1960).

> Collins had two-and-a-half styles during the fifties: �

I would not describe them as "clunky". They were big and heavy because
that's what the job required at the time.

Included in that list is the 75A-4, a pioneering receiver that
is still a good performer, and which can be modified to be
an excellent performer. (The mods involve using a better
tube for the RF amplifier upgrading the 6BA7 mixers).

The 75A-4 is the first receiver I know of that included passband
tuning as a standard feature.

>�Then came the
> intermediate styling of the tiny KWM-1 SSB transceiver. �

Yep. I don't think Collins ever repeated that!

> That was
> followed by the light gray, low profile styling of the KWM-2/2A and

Which changed the game completely.

> Japanese manufacturers did not gain more than a
> toe hold in the U.S.

That's true.

> Only in low-end, inexpensive stuff sold by the likes of
> Lafayette Radio, did the JA stuff do well. �Most of their
> "communications receivers" weren't really that.

Lafayette HA-350, anyone? Henry Radio Tempo One?

There were also Japanese parts sold through Lafayette and others, such
as vernier dials, knobs, panel meters and other parts. Allied
also got into that game.

> WW II was only over for fifteen years by 1960. �

> inexpensive gear sold by Lafayette and others.
>�Kenwood HF gear didn't
> really start selling much until the early/mid-1970's.

IMHO what turned the tide were two now-classic HF rigs: the Yaesu FT-101 and the Kenwood TS-520.

Actually these were families of rigs, and the early ones weren't any great shakes, particularly the FT-101. But the companies learned and improved, and by the time of the FT-101E and the TS-520S they were pretty decent. Not Drake or Collins quality, of course, but not Heath either. And they offered things American rigs did not.

Consider the TS-520S, for example. It did the usual 80-10 meter SSB job pretty well. But it also gave a choice of AGC fast/slow/off, an optional narrow CW filter that was pretty good, RIT/XIT, 160 meters and WWV/JJY, fan-cooled finals, plus a built-in AC power supply.

> I don't see "smarts" entering into the mix as much as low
> price. One
> could save hundreds of dollars on an HF transceiver made
> in Japan
> compared to the price of one made in the U.S.

Not just price but price/performance/features combo. For example, try to think of a US-made HF amateur transceiver that had the following:

- 100 watt output class
- 6146 finals, not sweep tubes
- Sharp CW filter
- RIT/XIT
- AGC off/slow/fast

> Early Japanese suffered
> from awful receiver performance. �

Particularly IMD in their SS products. They could not compete with tube designs. They got better, though.

> That made it possible for outfits like

40 years of Ten Tec ham rigs. Incredible.

Digi-Key got its start about the same time as Ten Tec - 1968 or so.
Their name comes from the fact that the company got started by selling
digital ICs (RTL!) in small quantities to hams so they could build
solid-state Morse Code keyers. Then they just kept growing, but the
name stayed.

Exactly. Nor are they overly ornate. They are functional and
attractive just as they are.

The same is true of a lot of homebrew gear. Look up the stuff made by
one of my Elmers, master homebrewer W2LYH. (several QST articles).
Great stuff, high performance, no ornamentation, Sounded great on the
air, too.

I have to strongly agree with my brother here. (Yes its come to this.
Its come to this. And wasn't it a long way down.) I'm deliberately
trying to prepare myself to be an effective emergency communicator and
I'll just go ahead and admit that it is a lot heavier going then I
initially anticipated. There is an awful lot to learn only some of
which is radio theory and practice. I'm part way through the ARRL
Emergency Communications Level I course and they have already devoted
two sections to subjects like the relationship with the served agency.
Some Hams have trouble with the idea that no one wants them to read
messages to each other any more. The folks who need our help in order
to help the actual victims want to sit down at their laptop, compose an
email and expect us to get it were it needs to go. One of the best
answers to limited training time is to use technologically based best
practice and apply it to the problem. An emergency manager will get a
lot more out of my Amateur TeleVision (ATV) signal then he / she will
ever get out of my verbal description of what I'm seeing. If they use a
VCR I can get a lot of windshield survey done very quickly. The people
responsible for supporting the response can get a lot more information

out of that video by syncing it with an APRS position record of were I
was then they'd very get out of brief verbal reports. I hear some
fellow Amateurs moaning that "they just want appliance operators." Cash
your reality check guys that's what they've always wanted from us. It's
only the sophistication of the appliances and the expectations for what
is possible using them that are changing.

The Joint Commission on the Accreditation of Healthcare Organizations (JCAHO) - is now requiring that every Emergency Department ("ER") that they accredit have ham radio as a backup communications system for emergencies when other communication systems fail, and as a result, the regional hospital system at which I volunteer is using licensed staff people normally in the ER to be able to act until a volunteer or licensed off-duty staff person can respond. As long as the responding staff person is off duty, the "no pecuniary interest" test is satisfied.

We are establishing a system-wide capability of both HF and VHF/UHF ham stations at each hospital, clinic, and the Regional Emergency Command Center. During the severe storms last December, ham radio was the only link to two hospitals whose telephone, internet, cellphone, and electric services were knocked out for several days, and as a result, both medical and support staff people have been expressing an interest in getting themselves and their family members licensed, if only to be able to keep contact with their families and still be of service when needed.

As far as being a requirement for employment, let me relate a parallel situation with the commercial General Radio Telephone Operator License that happened shortly after the FCC stopped requiring that license to service land-mobile (2-way) radios. A local utility in San Francisco continued to require that their radio technicians have that license as a condition of employment (under union pressure, I understand) and someone took that to the State Labor Board, which ruled that if the FCC Rules did not require it, it was a non-job-related requirement on the part of the employer and could not be enforced. The State of California and the railroads got away with keeping the requirement because they operated marine/aviation stations at airports and bridges where the licensed-technician requirement still applied.

In sort, a ham license cannot be required for a job except as permitted under the FCC Rules. Getting the employer(s) to accept this is another story - someone must be willing (and have the deep pockets) to take it to litigation if need be.

Actually, the Association of Public-Safety Communications Officials (APCO) does have training courses and certificates for just those specialties, and it's up to the Comm Director to go forward with those things and get the staff trained.

And that is fits my description of the way Ham radio for Emcomms is heading. If I was a supervisor, and in an emergency, I'm going to pick the person who works for me instead of a possibly unknown quantity.

I've headed up some works using volunteers. You have to treat them a lot differently, and many of those differences are solved by having a paid person for whom you can issue direct orders to.

As for the "off duty" business, that one is quite easy to solve. If it is a salaried employee, on and off duty time isn't always that clear anyhow.

I would be willing to wager an adult beverage that in 10 years, the hobbyist ham involved in emcomms will be completely replaced by those "off duty" professional hams. It's conjecture of course, but I've seen the beginnings of that. And your above description certainly fits.

<some snippage>

> was then they'd very get out of brief verbal reports. I hear some fellow Amateurs moaning that "they just want appliance operators." Cash your reality check guys that's what they've always wanted from us. It's only the sophistication of the appliances and the expectations for what is possible using them that are changing.

Yeah, mostly. The issue that I see is this.

The Emcomm managers go to the school of "Just tell me what to do". Not really a bad idea. No manager should have to know the technical details of say an ATV repeater, although a little knowledge might be good, as in when the conditions prevent proper operation.

What I see as a possible problem is that as the hobbyist Hams are phased out, these technical innovations might not filter down to practice as easily. They might not be operated by people who know what to do when the wheels fall off. It's all transparent as long as we push the button on that appliance and it works. But when it doesn't??

I should probably take this moment to not that I am NOT "anti Emcomm". In fact, as my retirement comes around, I intend to volunteer as a way to pay back to the community. I'm hoping that there will be a place for the hobbyist and technically savvy Ham to do that.

but I do have some concerns.

Loads and loads. Most were variations on a common theme with styling
changes though octal tubes might have been replaced by loctals or
miniature 7 or 9 pin types.

>> Collins had two-and-a-half styles during the fifties: �

Well, I meant in contrast with the smaller, much lighter S-Line stuff.

> Included in that list is the 75A-4, a pioneering receiver that

The 'A-4 was the best of the period. The models with the Collins
vernier tuning knob were the best of the best.

> The 75A-4 is the first receiver I know of that included passband
> tuning as a standard feature.

I think you're right. My 75A-3 came with a Universal Service
(predecessor to today's Universal Radio) PTO mod which plugs into the
NBFM socket. The Collins winged emblem was removed, a hole drilled in
the spot and a long 1/4" shaft from the PBT box ran through the hole.
An engraved plate was mounted on the panel and the shaft was fitted with
a miniature knob. A mod for the AGC time constant was also added. The
thing is nearly the equal to a 75A-4.

>> �Then came the
>> intermediate styling of the tiny KWM-1 SSB transceiver. �

>
> Yep. I don't think Collins ever repeated that!

It was a funny duck. It had almost a military look to it.

>> That was

>
> Which changed the game completely.

Everybody began jumping on that band wagon. Heathkit came up with the
"poor man's S-Line"; Drake introduced the 1-A, 2-A and 2-B and TR-3;
Swan introduced monoband and multiband transceivers; Hallicrafters and
National also began producing smaller, lighter separates and transceivers.

The Lafayette HE-10, HE-30, HE-80 were Trio rigs. The Tempo One was a
Yaesu FT-100. The FT-50 and FR-50 were sold by another firm.

> There were also Japanese parts sold through Lafayette and others, such

I'd toss in the Yaesu tube-type rigs such as the FTDX-560 and 570.

> Actually these were families of rigs, and the early ones weren't any

> either. And they offered things American rigs did not.

They did offer extras but you should look at the TS-520's receiver specs. They're dismal. The FT-101 series would have been pretty good had it not been for a flaw in leaving the noise blanker connected even when it was turned off. That's a flaw Yaesu continues to make. It is one of the problems with the FT-1000 series.

> Consider the TS-520S, for example. It did the usual 80-10 meter SSB
> job pretty well. But it also gave a choice of AGC fast/slow/off, an
> optional narrow CW filter that was pretty good, RIT/XIT, 160 meters
> and WWV/JJY, fan-cooled finals, plus a built-in AC power supply.

Yep. It served pretty well as an everyman's rig and would have been much better if the receiver section had been better design. The Japanese were not the only ones with this problem. Heath's early solid state receiver, the HW-303 was an absolute clunker in this regard.

Hammarlund made one valiant effort to stave off the JA's with the introduction of the solid state HQ-215. I have one of those and it is a pretty darned good receiver. It has an edgewise drum dial with 1 KC readout, has fixed, selectable USB/LSB and a variable BFO for CW. It has a preselector in the front end, offers AUX band positions and places for three Collins mechanical filters. The mixing scheme is the same as the S-Line and it has the same 200 KC band segments. There are input/output ports on the rear panel so that the receiver can be slaved to a 32S-whatever transmitter for transceive use. I think it was first offered about 1967.

That's quite a number of preconditions. I don't think there were any. The Heath SB-102 comes close. The Drake TR-4CW comes close (6JB6's).

>> Early Japanese suffered
>> from awful receiver performance. �
>

They got a lot better over the years. I ran the FR-101 with the FT-101E
for a couple of years. It did pretty well.

Agreed. I've often wondered if any of the modern gear will be
functional/repairable in forty or fifty years. My guess is that it will
not.

I know a few guys who still operate the W6TC HBR series of receivers
that they or others constructed. I also of quite a number of quality
homebrew linear amps which are still put on the air on a regular basis.

> Great stuff, high performance, no ornamentation, Sounded great on the

If you're building something small, try hobby shops. They often have
bins of both brass, copper and aluminum sheet in various thicknesses
along with round and square tubing and rod of the same materials.

>> there might be
>> some technical reasons fort one over the other, but in the end,

Wood with a thin sheet of flashing aluminum is one way to get the shielding.

You can find a number of Heath and Drake units with really good looking
plating. I suspect that the problem units were stored in areas of high
humidity.

> What Drake and others did was to plate the chassis after all the holes
> were punched. That's fine for production-line manufactured rigs, but

> sometimes plastic and wood.

I think home plating of a large chassis would be so very time consuming
that not many would bother. It is also much easier to work aluminum
than steel. I wouldn't hesitate to break the copper plating for
modifying/repairing such equipment. A touch of lacquer on the edges
would keep air and humidity from getting to the steel.

> TSS is about simplicity and functionality, not minimalism. If staining

The tempered Masonite, no doubt. The front panel of W4JBP's 1941 homebrew transmitter is of that stuff, painted black.

> Possibly. I've had some experience building speaker cabinets (clones
> of the Altec A-7 "Voice of the Theater", JBL folded horns, for

I've shared the experience and still remember all of the kerfing that went into getting those curves right. Add a 15" Electrovoice SRO speaker (which was about 3db better than anything else on the market at the time), top is with some massive horn tweeters and you had something.

> I've always wondered what the fascination with "antiques" is. I can
> understand the fascination with craftsmanship, design, practicality

I think there a couple of classes of antique furniture items. There are those things which can only be viewed and those things which can be used. A small, antique ladies chair might not be something you could use, but an antique dining room suite or an antique sideboard can be quite utilitarian.

> The term I would use is "classic" or "timeless". Look at some Mission
> or Shaker furniture - it does not appear "antique" or dated. That's

> budget!)

I had to grin. I believe that 2x4's, 4x4's, plywood or hollow core doors will never go out of style. There's no "Captain Nemo walking into his cabin on the Nautilus" look here, but the place is attractive and utilitarian.

Hallicrafters never went for loctals in a big way; they were used only where there was no other choice at the time. Your variations-on-a-theme idea is correct; notice how similar the SX-42 and SX-62 are on the inside.

> The 'A-4 was the best of the period. �The models with the Collins
> vernier tuning knob were the best of the best.

IMHO Collins made a design mistake by putting such a fast tuning rate (100 kc. per knob turn) on the 75A-4. The reduction knob fixed that.

A few years ago, a small company began manufacturing a reduction knob for the 75A-4, machined out of solid brass. Functional and attractive.

How did it provide PBT? The 75A-4 PBT is entirely mechanical; it works by rotating the PTO and the BFO controls simultaneously, but so that their frequencies move in opposite directions. The linearity of both oscillators is such that the received carrier frequency does not move.

>�A mod for the AGC time constant was also added. �The

> transceivers.

IIRC the 1-A predated the S-line and KWM-2. It was a revolutionary design; small, light and compact at a time when even inexpensive receivers were big and heavy. Note the tiny, taller-than-it-is-wide front panel and the very deep chassis. The 1-A had passband tuning too, but it was implemented by having a tunable LC filter at the last IF. The 2-A and 2-B are excellent receivers for their price and complexity, and are prized today. But they were a dead end in one way: there was no matching transmitter that could transceive with them.

What the KWM-2 and S-line did was to make "transceiving" popular.

The KWM-1 and a few other rigs like the legendary Cosmophone (the first true full-featured HF amateur transceiver) had been the first manufactured amateur HF rigs to use the same tunable oscillator to control both the transmitter and receiver, but they did not achieve wide popularity.

Indeed, a homebrew 40 meter *CW* transceiver built around a surplus BC-453 was described in a 1954 QST, probably the first published use of the idea in amateur radio. It even had full QSK. But it was ahead of its time.

The KWM-2 and S-line took transceiving to another level. Not only were they smaller and lighter than their predecessors, they had relatively few controls. They made SSB more popular with hams by reducing the cost and size and eliminating the job of zerobeating the transmitter. Tune an SSB station correctly and the transmitter was automatically on the right frequency.

Add to this the grounded-grid linear amplifier and things really changed. High power 'phone became not only less expensive but a lot smaller and lighter. Transceivers and matched-pair separates became the new paradigm in HF ham gear; AM wasn't part of that.

Compare the Heathkit line of 1964-65 with what they were selling just 5 years earlier for just one example.

Well, sort of. They had QC problems and were really competition for the likes of Swan, who did the same lots-of-watts-from-sweep-tubes game.

> They did offer extras but you should look at the TS-520's receiver
> specs. �They're dismal. �

But you have to ask "compared to what?" Plus they were almost all
"solid state", which was a selling point even if performance suffered.

Agreed, but for the time and price it was decent enough. Point is,
it opened the door.

> �The
> Japanese were not the only ones with this problem. �

I think you mean the SB-303. And yes it was - very sensitive but at
the cost of dynamic range.

> offered about 1967.

Correct on all counts. It was meant to be a solid-state 75S-3. But
never quite got there. Hallicrafters made the almost-all-solid-state
FPM-300 transceiver a few years later, too.

Its drum dial inspired the Southgate Type 4 (receiver) and Type 7 (transceiver) dials. But they use all-gear-drive.

It should be remembered that there were some colossal also-rans in that period, too. B&W made their 6100 transmitter with its multiknob mixing synthesizer, obviously inspired by commercial/military sets like the R-1051. Stable but poorly adapted to amateur HF operation.

The legendary Squires Sanders SS-1R was poised to give Collins a good run for the money, but without a matching transmitter, not many hams were going to spend S-line-level dollars for it.

Some folks criticized amateurs for being "slow" to use solid-state HF rigs, but there was a reason for caution. More than one early SS rig had come to grief, like the Hallicrafters FPM-200 of the early 1960s and the EF Johnson Avenger transceiver, of which only about a dozen were made. Avenger was a decent rig but cost so much to make that EFJ never produced more, knowing they wouldn't sell. EFJ never again made an amateur HF transceiver, and was soon not making HF ham gear at all.

Central Electronics pioneered the no-tune transmitter (with all tubes!) back in the late 1950s, and was poised to market a matching receiver (the 100-R) which was reportedly as good or better than the 75S-3. But the company was bought for some patents and other contracts and was soon out of the amateur market. The sole 100-R prototype survives to this day.

OTOH, Southgate Radio is still building rigs after 40+ years...

Not really, IMHO, and they're pretty basic things, easily implemented with 1960s technology.

>�I don't think there were any.

Exactly.

> The Heath SB-102 comes close. �

Not really. It doesn't have RIT/XIT, and you can't easily add it. Can't turn off the AGC nor adjust its time constant either.

> The Drake TR-4CW comes close (6JB6's).

Only if you get the model that had both RIT and the sharp filter,
which was only produced for a short time. Blink and you missed it.
Plus check the price of a TR4-CW with power supply and speaker. Ouch!

By comparison, the TS-520S had all of that and more, even if the rx
wasn't as good.

t will
> not.

I think it will be, but in different ways:

The first way will be the renovators, who make a few good rigs from a
pile of problem sets. This is already starting to happen; look on ebay
for "TS-940" and you will see lots of parts for sale.

The second way will be the rebuilders, who will make replacement PCBs
using parts available then. A much harder go at first, but given the
automation possibilities now, who knows what the future could do.

> > Look up the stuff made by

>
> I know a few guys who still operate the W6TC HBR series of
> receivers that they or others constructed. �

There are folks still building HBRs today, from scratch.

But with all due respect to those designs, do check out W2LYH's
designs, such as the 23 tube receiver or the ultrastable Frankling

VFO. His construction is an art in itself; no ornamentation needed.

I often wonder what happened to his rig. I don't think I want to know.

> I also of quite a number of quality
> homebrew linear amps which are still put on the air on a regular
> basis.

Yep. Also a number of SB-200s, SB-220s, L-4s and similar amps are
pounding out the watts today, often with upgrades and modernizations.

I had a Hallicrafters SX-101 for many years - the one with the big
slide rule dial and the capability of adding a 2-meter converter (we
all ran AM in those days on 2m).  It weighed quite a bit and kept the
room warm in the winter, especially when paired it up with the HT-44B,
but worked very well.

C'mon to our hospital. We have several such ham volunteers (including me) and at least two staff people that fit that very description. For the non-technical folks, we have an operations chart which says that if Channel A fails, go to Channel B and here's how you do it. It's up to us techies to make sure that those channels are available where they are needed. I look up to their medical and hospital procedural knowledge as much as they look up to our radio knowledge. I learned an awful lot during the several shifts that I pulled during the December storms.

I like the early SX-101 as it covered 160m.  The later variants didn't
but one thing they did have was the oscillator tube filaments on at all
times when the rig was plugged in.  That helped stability quite a bit.
I'd still like to have a 101 to pair with the HT-32B.

The SX-42 is what brought the loctals to mind. Perhaps the '43 had 'em
too. If you look at the long line of Hallicrafters stuff, the S-40 was
basically a Sky Buddy with an S-meter and an extra stage.

I'm going to have to dig out the paperwork on the Universal Service unit
(which I got copies of just a year or two back) and let you know.

The CW filter I have is the 800 Hz unit. One of these days I may replace it with an Inrad unit. I'll have to juggle things a bit to match the modern Collins mechanical filter to the radio.

I think you'll find that all of them hit the market in '57.

> It was a revolutionary
> design; small, light and compact at a time when even inexpensive

> front panel and the very deep chassis.

Yes. The 1-A was also a good example of the Drake copper plated chassis. Unfortunately it was built as an SSB-only receiver. There were no provisions for a narrow filter for CW or a wider one for AM. In fact, the BFO could not be turned off at all. I sold a number of rigs after coming back stateside and the Drake 1-A was one of them.

> The 1-A had passband tuning
> too, but it was implemented by having a tunable LC filter at the last
> IF.

That sort of thing was Drake stock and trade until the R-4C. The low frequency IF filters really worked quite well in the Drake units.

> The 2-A and 2-B are excellent receivers for their price and
> complexity, and are prized today. But they were a dead end in one way:
> there was no matching transmitter that could transceive with them.

In the time when they were introduced, many folks were still using separates. I've kept my 2-B because it really is a classic and performs well today. The matching 2-BQ adds a lot to the receiver.

> What the KWM-2 and S-line did was to make "transceiving" popular.

Well, they made it popular for those with lots of money.

> The KWM-1 and a few other rigs like the legendary Cosmophone (the first true full-featured HF amateur transceiver) had been the first manufactured amateur HF rigs to use the same tunable oscillator to control both the transmitter and receiver, but they did not achieve wide popularity.

If I recall correctly, there were identical-looking models with two different power output levels.

> Indeed, a homebrew 40 meter *CW* transceiver built around a surplus BC-453 was described in a 1954 QST, probably the first published use of the idea in amateur radio. It even had full QSK. But it was ahead of its time.

You've aroused my curiosity. I'll have to dig through the back issues and check it out. There's a '453 lying about here somewhere.

> The KWM-2 and S-line took transceiving to another level. Not only were they smaller and lighter than their predecessors, they had relatively few controls. They made SSB more popular with hams by reducing the cost and size and eliminating the job of zerobeating the transmitter. Tune an SSB station correctly and the transmitter was automatically on the right frequency.

I have to disagree with the reduction of cost. When the KWM-2 was introduced, my dad made a little less than $6,000 per year gross pay as a Miami Herald reporter. That transceiver would have cost about a quarter of a year's pay. Fast forward a bit. When I bought a Ten-Tec Omni VI, the new cost was a small fraction of a year's pay and that rig offered features only dreamed about at the time of the introduction of the Collins rig. The KWM-2 was smaller and lighter but an HT-32B and an HQ-170 would have been cheaper by hundreds of dollars.

> Add to this the grounded-grid linear amplifier and things really changed. High power 'phone became not only less expensive but a lot smaller and lighter. Transceivers and matched-pair separates became the new paradigm in HF ham gear; AM wasn't part of that.

There are a couple of "duh" factors buried in there for us to mull over. It would have been possible for radio amateurs to have built and used grounded-grid linear amps for use with AM rigs much earlier. A rig such as the Johnson Ranger would have driven one to a KW AM input with ease.

> Compare the Heathkit line of 1964-65 with what they were selling just 5 years earlier for just one example.

You're right. Plated modulated AM rigs were gone from the line. You either got a small and light SSB rig or you bought a Novice type rig like the DX-60 with controlled carrier AM built in.

>>> IMHO what turned the tide were two now-classic HF rigs:
>>> the Yaesu

Right, but they were rigs which helped the Japanese penetrate the U.S. amateur radio market. One rig which we omitted was the Kenwood TS-511 which predated the '520.

>> They did offer extras but you should look at the TS-520's receiver
>> specs. �They're dismal. �
>

I suppose you're right, but having a reliable solid state receiver which will perform poorly for a long, long time, doesn't seem like much of a sales tool.

>

>
> Correct on all counts. It was meant to be a solid-state 75S-3. But
> never quite got there.

Actually it did get there. It wasn't perfect, but it was good. The problem is that there was no matching transmitter and the receivers didn't exactly fly off the shelves.

> Hallicrafters made the almost-all-solid-state
> FPM-300 transceiver a few years later, too.

That was a loser from the git go. It offered no CW filters and didn't (I don't think) offer 1 KHz readout. I think that was after Bill Halligan sold the firm to Wilcox Gay.

> Its drum dial inspired the Southgate Type 4 (receiver) and Type 7
> (transceiver) dials. But they use all-gear-drive.

That should be quite solid.

I just checked the HQ-215 and a single turn of the tuning knob equals 15 KHz. That was respectable in its day. My Orion, as I've set it up for CW, tunes about 1.65 KHz per knob revolution. If I tap a button, the rate changes to about 6 KHz per revolution. It ratio can be set higher or lower. At the lowest step setting, one revolution provides about 65 Hz.

> It should be remembered that there were some colossal also-rans in
> that period, too. B&W made their 6100 transmitter with its multiknob
> mixing synthesizer, obviously inspired by commercial/military sets
> like the R-1051. Stable but poorly adapted to amateur HF operation.

That was a blunder. The 6100 was every bit as big and heavy as its

AM/CW only 5100 and this at a time when others were moving to smaller and lighter gear.

> The legendary Squires Sanders SS-1R was poised to give Collins a good run for the money, but without a matching transmitter, not many hams were going to spend S-line-level dollars for it.

That receiver was ahead of its time, but nobody came to the party. As a result, they're very rare and bring lots of money on today's market.

> Some folks criticized amateurs for being "slow" to use solid-state HF rigs, but there was a reason for caution. More than one early SS rig had come to grief, like the Hallicrafters FPM-200 of the early 1960s and the EF Johnson Avenger transceiver, of which only about a dozen were made. Avenger was a decent rig but cost so much to make that EFJ never produced more, knowing they wouldn't sell. EFJ never again made an amateur HF transceiver, and was soon not making HF ham gear at all.

We can draw a comparison to those folks who lost out during the battle between Panasonic and Sony in the videotape format war. Those folks were slow to change to DVD players and are being even slower still in going HD-DVD or Blu-Ray. It appears that the Blu-Ray format is the winner and that people will begin to purchase those units as the prices come down.

> Central Electronics pioneered the no-tune transmitter (with all tubes!) back in the late 1950s, and was poised to market a matching receiver (the 100-R) which was reportedly as good or better than the 75S-3. But the company was bought for some patents and other contracts and was soon out of the amateur market. The sole 100-R prototype survives to this day.

I'll bet that one is worth a fortune. The 100V and 200V transmitters go for a great deal and they aren't all that rare. I've never owned one but I've had my hands on a few. The only Central Electronics gear I've owned have been 10-B's and 20A's along with their small monitor scope and a sideband receiving adapter (phasing type like the transmitters).

> OTOH, Southgate Radio is still building rigs after 40+ years...

Heh.

>>> Not just price but price/performance/features combo.

>>> - RIT/XIT
>>> - AGC off/slow/fast
>> That's quite a number of preconditions.
>

> Not really, IMHO, and they're pretty basic things, easily implemented with 1960s technology.

Well, that leaves us discussing what was built vs. what might have been built.

>> �I don't think there were any.
>
> Exactly.
>
>> The Heath SB-102 comes close. �
>
> Not really. It doesn't have RIT/XIT, and you can't easily add it.

Actually, you can. I've added it to my HW-101A. The mod is applicable to the SB-100 through SB-102. There's a single mini-toggle switch and a pot (with matching green Heath knob) added to the upper right quadrant of the panel. My HW-101 has an added divide by four calibrator as well for 25 KHz markers.

> Can't turn off the AGC nor adjust its time constant either.

You could easily add a switch to implement several AGC time constants.

Yeah, I know--Heath didn't build 'em that way.

>> The Drake TR-4CW comes close (6JB6's).
>
> Only if you get the model that had both RIT and the sharp filter, which was only produced for a short time. Blink and you missed it.

That was the last model variant. Remember that those Drake transceiver used *three* sweep tubes in the output for a bit more oomph. The C-Line transmitters used a pair.

> Plus check the price of a TR4-CW with power supply and speaker. Ouch!

Guys argued with Drake for ages about the inclusion of CW filters and RIT in the transceivers. The Drake folks couldn't understand how anyone would need such things. Amateur radio is much more market driven today. The lower end rigs are driven by cost and the upper end gear is driven by DXers and contesters demanding performance.

> By comparison, the TS-520S had all of that and more, even if the rx wasn't as good.

DXers and contesters weren't buying them though. When Kenwood began marketing TS-830's, TS-930's and TS-940's, the power user types began buying them. Kenwood went really well through the TS-850's and TS-950's, then quite building competitive rigs. The TS-2000 is a dog with lots of bells and whistles. It does everything from DC to daylight--poorly.

>>> Digi-Key got its start about the same time as Ten Tec - 1968
>>> or so.

> for "TS-940" and you will see lots of parts for sale.

Okay. Gone are the days when you reach into bins of transistor or IC's
and expect to be able to repair much of anything. Large scale
integrations and specialty chips took care of most of that.
Kenwood rigs in particular seem to suffer. The 930's, 850's and 940's
are examples of rigs where the displays and display drivers aren't
available any longer.

>
> The second way will be the rebuilders, who will make replacement PCBs

Maybe a collector got it. That'd be best case scenario.

>> I also of quite a number of quality
>> homebrew linear amps which are still put on the air on a regular
>> basis.
>
> Yep. Also a number of SB-200s, SB-220s, L-4s and similar amps are
> pounding out the watts today, often with upgrades and modernizations.

Surely! Softkey circuits, inrush protection and the like have been
added or band have been added. My example of the last model in the
SB-220 line, the HL-2200 (a restyled SB-220 in brown clothing) is doing
a great job as a 6 meter only pair of 3-500Z's at about 900w output.
It has the softkey mod so that any modern transceiver can safely key the
amp.

$125 IIRC.

Will be good to know.

I think the same company that made the reduction knob made exact plug-in filters. Dunno if they made a CW one.

At the University ham shack we had two 75S-3s. One had the
200 Hz filter, aka "the ringmaster". But boy could they hear!

> > IIRC the 1-A predated the S-line and KWM-2.

> I think you'll find that all of them hit the market in '57.

The KWM-2 came after the original S-line (75S-1/32S-1) Check your old
QSTs, you'll see the 1-A advertised well before the KWM-2.

> after coming back stateside and the Drake 1-A was one of them.

1-A was Drake's entry into the ham receiver market; previously
they had only made things like lowpass filters. Their idea was to
cut the cost of SSB to the bone by making a receiver specific to
the mode and leaving out anything not needed for SSB. Hence no
diode detector, no BFO-off, no narrow filter, etc. But it had PBT,
which also gave sideband selection, an S-meter and AGC that
worked on SSB, and was very stable.

That mode-specific thing inspired many of the Southgate receivers.

About 15 years ago I walked away from a hamfest table that
had a 2-B/2-BQ combo for $75. "To think about it". Oh fer dumb.....

> > What the KWM-2 and S-line did was to make

Not just those folks. The idea got wide publicity and led to lots
more rigs at a lot lower prices.

IIRC the author's last name was Deane. I do not know of any earlier
HF amateur transceiver being described in QST or any other
publication.

> quarter of a year's pay.

And $6000/yr gross income was solid middle class. A family of four could live very well on $6K, 50 years ago.

What I meant was that a KWM-2 and power supply/speaker cost less than top-of-the-line separates like a 75A-4 and HT-32B.

Or compare the price of an S-line and a KWM-2.

To get an idea of the influence of the KWM-2, google "LWM-3"...

>� Fast forward a bit. � When I bought a Ten-Tec

> 32B and an
> HQ-170 would have been cheaper by hundreds of dollars.

Agreed. But the KWM-2 put the idea of the one-box station out there in a big way. A lot of less-expensive transceivers with minimal controls followed. People saw the success of the KWM-2 and designed less-expensive alternatives based on the idea.

> with ease.

Some hams did that but the big problem was the low efficiency of AM linear without the use of special circuits like the Doherty, which isn't the fastest QSY circuit.

With AM linear you only get 30-35% carrier efficiency. Which means 300-350 watts carrier at the old 1 kW legal limit. Plus your final tubes have to be able to dissipate 650-700 watts!
The same results could be had from a 450-watt class plate-modulated AM rig - say, a pair of 812As modulated by a pair of 811As.

AM also required power supplies that could stand the 100% duty cycle of the mode. The low duty cycle of early unprocessed SSB rigs meant a lot of liberty could be taken in PSU design.

The end result was rigs like the NCX-3 and the SB-100, which cost as much as a good receiver but were complete 100-watt SSB stations that you could indeed set up on a card table.

When Heath introduced the SB-200 in 1954, it cost $200. Legal limit on CW, 1200 watts PEP on SSB (input). That was a lot cheaper than the equivalent AM, and would fit on the card table.

IOW, high power AM cost a lot of dough and a lot of space/weight. The SSB transceiver/GG linear paradigm drastically reduced those requirements.

Fun fact: AFAIK only two 1 kW-input-legal-limit plate-modulated AM rigs were ever made for the amateur market: the Collins KW-1 and the Johnson Desk Kilowatt. Total production was very limited - maybe 2000 units combined.

I can't begin to recall the number of models of legal-limit GG amplifiers made. EFJ Thunderbolt, SB-220, Heath KL-1...

More to come...

I shouldn't post late at night when I'm tired. What I meant to say was that I plan to use the old computer tower for the power supply, not the entire amp.

Remember too that in the 1970s US ham radio was growing fast. This was
right after the 1968-1969 "incentive licensing" changes which some
said were going to destroy amateur radio. The numbers tell a different
story.

> > Hallicrafters made the almost-all-solid-state

Which brings up another point: In that time period, a number of the
classic US ham radio manufacturers were losing their founders, either
through sale of the company or retirements, etc.

> > Its drum dial inspired the Southgate Type 4 (receiver) and Type 7

It's very solid, and so easily done that I wonder why it hasn't been
done more by others. The tuning cap is from a BC-221, and there's none
better anywhere.

> I just checked the HQ-215 and a single turn of the tuning knob equals 15

> or lower. � At the lowest step setting, one revolution provides about
65 Hz.

All Southgate Radio receivers from the Type 3 onward have had slow tuning rates - typically 5 to 7 kHz per turn. That's about 1969 to the present.

> The 6100 was every bit as big and heavy as its
> AM/CW only 5100 and this at a time when others were moving to smaller
> and lighter gear.

Yes but that was the least of it. It cost almost as much as a 75S-3 or T-4X but there was no matching rx that could transceive with it. And while the military might have a use for those multiknob synthesizers, for HF ham radio they're just not the thing to use.

> > The legendary Squires Sanders SS-1R ....

Very few companies have been able to enter the ham radio market from the top. Collins did, but they had a reputation from WW2 and before, and more importantly had a broad base of non-ham products that paid for much of the research. I have heard that Collins did not expect the amateur product line to make money; its purpose was to be the best and keep the company name in view.

About the only company besides Collins that was able to come into the ham radio market at the top was Signal One - which didn't last.

Yep. There was also the 10A, quite rare now. Some folks claim they
were the origin of the amateur USB/LSB convention, but doing the math
shows that cannot be the case.

> > OTOH, Southgate Radio is still building rigs after 40+ years...

Yes, and they were supposed to be matched. Some folks have worked up
mods to use 6146s in those rigs.

> > Plus check the price of a TR4-CW with power supply and speaker. Ouch!
>
> Guys argued with Drake for ages about the inclusion of CW filters and
> RIT in the transceivers. � The Drake folks couldn't understand how any
one
> would need such things. �

Interesting! I always thought the reason they were left out was so
that folks would buy the separates.

> Amateur radio is much more market driven today.
> The lower end rigs are driven by cost and the upper end gear is driven
> by DXers and contesters demanding performance.

Sherwood has tested the Elecraft K3. Next issue of QST will carry a
Product Review of it too.

> > By comparison, the TS-520S had all of that and more, even if the rx
> > wasn't as good.
>
> DXers and contesters weren't buying them though. �

'Course not. But they weren't the target market, either. The SB-101/
HW-101 crowd were.

I remember that towards the end of its run the HW-101 price reached
$449, which was almost double its introductory price less than a
decade earlier. That was without power supply, speaker, mike or sharp
filter. And you had to build it. FT-101/TS-520S took that market!

> When Kenwood began
> marketing TS-830's, TS-930's and TS-940's, the power user types began

> with lots of bells and whistles. � It does everything from DC to
> daylight--poorly.

There are persistent rumors that Kenwood has given up the serious
amateur market. Sad if true,

The TS-570 is also highly regarded.

> > Newark and Allied are still around.

> Newark is a first rate outfit. � Allied is the bottom of the distribution
> barrel. � I generally buy from Mouser or Digikey. � For bargains,

Agreed but there will be some rigs that have other problems but good
displays.

> > The second way will be the rebuilders, who will make replacement PCBs

> > automation possibilities now, who knows what the future could do.
>
> Jim, I just can't see that being profitable.

Probably won't be. I suspect some folks will do it just for the heck
of doing it, though.

And consider: $125 for a reduction tuning knob for a receiver that
went out of production more than 45 years ago?

In the bad old days PC fabrication for homebrewing meant doing layout
work, resist, etching, drilling, etc. I've done it and got good at it.
But today you just download some freeware from a PC fabrication house,
put together a circuit, develop a layout and send it by email to the
fabricator. Prices are low for small boards and the quantity is first-
rate. Plus if a couple of hams go together, or you just want spares,
it's a no-brainer. Automated manufacturing does the work.

> > There are folks still building HBRs today, from scratch.
>
> I'd think that getting some of the parts could be really difficult.

You'd be surprised what folks have squirreled away....

In reality the only unobtanium parts are the coil forms and IF cans.
One trick is to use ARC-5 IFTs instead. But I prefer original
Southgate designs.

> > Yep. Also a number of SB-200s, SB-220s, L-4s and similar amps are

> a great job as a 6 meter only pair of 3-500Z's at about 900w output.
> It has the softkey mod so that any modern transceiver can safely key the
> amp.

Exactly. Many are modded for QSK as well.

Yet way back in April 1976 - 32 years ago! - the cover article in QST was for a legal-limit solid-state HF amp. When I saw it, I figured that it wouldn't be too many more years before hams wouldn't have any hollow-state in their shacks....

The former belongs in a museum, the latter in a home.

> > The term I would use is "classic" or "timeless". Look at some Mission or Shaker furniture - it does not appear "antique" or dated. That's what TSS is all about, applied to Amateur Radio (and a limited budget!)
>
> I had to grin. � I believe that 2x4's, 4x4's, plywood or hollow core doors will never go out of style.

I rip 2x4s in half lengthwise; they're all you need for most shack furniture. Also do an offset cut that gives one piece 1-1/2" square and another that's 2x1-1/2" from a single 2x4. Table saw makes it easy.

I did one table with a hollow core door many years ago (it was free) but they are too flimsy and too expensive for TSS approval now.

The shack table in the website picture was designed for Field Day use, 25 years ago. The top was the maximum size that would fit in the back of a VW Rabbit with the rear seat taken out. All the legs and braces are bolted on in such a way that the whole thing breaks down into one package. Does the job for now but a replacement is in the works. Maybe.

>� There's no "Captain Nemo walking into his cabin on the Nautilus" look here, but the place is attractive and utilitarian.

IMHO the true art of a hamshack is having things set up in such a way that you just want to sit down and start operating as soon as you see the place.

Amateur Radio Newsline(tm) Report 1595 - March 7, 2008

Amateur Radio Newsline report number 1595 with a release date of Friday, March 7th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. Dayton announces this years award winners. A big win for a Maryland ham as the states Supreme Court turns away a neighbors appeal in a tower case; the FCC says that Morse testing will not return and a ham who wants to retire has his business foe sale on eBay. Why eBay you ask? Find out on Amateur Radio Newsline(tm) report number 1595 coming your way right now.

(Billboard Cart Here)

RADIO LAW: MD SUPREME COURT TURNS AWAY TOWER CASE - BIG WIN FOR HAM

The Maryland Supreme Court has declined to hear the case involving a set of ham radio towers on in the town of Poolesville. That's good news for the ham who has been fighting to keep them. Amateur Radio Newsline's Bruce Tennant, K6PZW, explains:

--

The Maryland Supreme Court has decided against being involved in the case where neighbors of John Evans, N3HBX, had sued after he obtained a permit and installed several 100 foot and higher radio towers as part of a contest station. The neighbors claimed the installation would devalue their property and that the installation was an eyesore.

The case began back on August 30th, 2004 when neighbors of Evans antenna farm went to the Board of Appeals on Aug. 30, 2004, less than a month after construction began on the towers. The Board dismissed the neighbors' complaint that the tower permit was issued in error in November 2004. It said that the 30 day window of opportunity to appeal the permit had passed.

The permit had been issued June 23rd, but the neighbors clain they first learned of the project when construction equipment arrived on August 5th .

Two neighbors of Evans 44 acre property, Thomas Burruss and Alan Gaunoux, filed the lawsuit in August 2004. The case eventually wound up in the Maryland Court of Appeals, which upheld the Board's original finding that the neighbors were too late to contest the permit. It did instruct the appeals board to decide if not notifying the neighbors had denied them of their due process property rights. The board found that the neighbors did not have any due process rights to Evans' land. This is the decision the neighbors ultimately took to the Supreme Court.

According to the lower court findings, Evans, who said he has spent $160,000 in legal fees, was within his rights to build the towers and followed the proper procedures. The county permitted the towers as an allowable accessory use, much like a swimming pool, detached garage or shed, according to county Board of Appeals documents and other published reports. His attorney Steven Van Grack says that as a matter of law, the towers were constructed legally.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

Though the Supreme Court ruling was the end of the road for the administrative case, the neighbors also filed a civil lawsuit against Evans in Circuit Court in August 2004. Its been on hold until the administrative case concluded. (Gazette.net)

BREAKING DX NEWS: SPRATLY ISLANDS COMING OIN THE AIR

If you have waited a ham radio lifetime to work the very elusive Spratly Islands, wait no longer. This with word that Ed Sawyer N1UR and his wife Christine, KB1PQN are expected to be active portable 9M6 from the Layang-Layang Island Resort in the Spratly Islands. This, between 0800 UTC on , March 22nd through midnight UTC on March 30th.

The duo have already received their licenses. Once they get permission from the Navy, they will apply for a special 9M0 callsign. Activity will be on 160 through 10 meters, on CW and SSB. 100 watts to omnidirectional verticals will be used from the near-by beach and the operators will be moving bands frequently to take advantage of changing band conditions and openings. Sunset on Spratly is 1040 UTC with sunrise at 2240 by the middle of that week.

QSL cards for either operator go via Bob Tomkovich, Jr., K2RET, 405 Hemlock Dr., Lanoka Harbor, NJ 08734 in the USA. More information is on line at www dot n1urspratly dot com. We will have more DX news later on in this weeks Amateur Radio Newsline report. (OPDX)

**

THE BPL WAR: SARL SAYS NO TO PLT / BPL

The South African Radio League will be taking a very tough stance in its fight to stop the proliferation of Broadband over Powerline Internet access in that nation. According to a society news release, while the draft regulations for the introduction of what they call Powerline Internet Transmission or PLT go some way to protect the High Frequency radio spectrum from interference the general consensus was that the regulations do not go far enough. SARL says that interference limits, the lack of compulsory notching of the Amateur bands and the inadequate mitigation process were identified as some of the issues left open.

The decision was reached following a nationwide net on Sunday, February 24th where the draft PLT regulations and the negative impact the licensing of Powerline Internet Transmission in South Africa will have on HF communication were discussed. The South African Radio League also received input from experts in the field and a major assistance from the ARRL laboratory which has been dealing with BPL interference issues for several years. (SARL)

**

RADIO LAW: FCC SAYS NO TO MORSE RECONSIDERATION REQUESTS

The FCC has said no to a pair of proposals that had asked for the restoration of Morse testing for a qualification to become and hold a United States Amateur Radio license. In a Memorandum Opinion and Order released February 28th, the FCC denied two petitions calling for General or Amateur Extra license applicants to demonstrate proficiency in Morse code.

In the wake of the FCC's actions to do away with Morse testing, two amateurs submitted separate petitions asking the agency to bring back Morse testing. Anthony Gordon, KG6EQM, objected to the FCC eliminating the telegraphy examination element as an examination requirement for the Amateur Extra Class operator license. Russell Ward, W4NI, requested the FCC reconsider its decision for strictly procedural reasons.

In denying both requests the FCC reiterated its prior conclusion that an individual's ability to demonstrate Morse code proficiency does not further the underlying purposes of the Part 97 rules. It appears to be of the opinion that Morse does not accommodate individual contributions to the advancement of the radio art and to enhance the value of the amateur service to the public.

In December 2006, the FCC decided to drop the Morse code requirement for all Amateur Radio license classes. At the time the commission decided to drop the Morse Code exam, it said knowing Morse is not necessarily indicative of an individual's ability to contribute to the advancement of ham radio. The agency also said emergency communication today is performed using voice, data or video modes. The agency claims that all of these are much faster than telegraphy.

The FCC said it received roughly 100 comments on the reconsideration request. It says that most were overwhelmingly negative. (RW, ARRL, FCC)

RESCUE RADIO: MARYLAND SENIORS FORM FIRST RESPONSE TEAM

A story in the March 5th edition of Hometown Annapolis dot com proves that you do not have to be young to be an emergency planner. A story titled Heritage Harbour's Detailed Plans Impress County Officials tells the story of how senior citizens in a planned Maryland community have put together a first response unit that includes everything from stockpiling food and medical supplies to communicating with the world using Amateur Radio.

In this case the communications hub is the garage of Heritage Harbour resident Walter Van Gieson, AB4DQ. Van Gieson was a radio operator who served in the military during World War II. According to the news article, in the event a disaster severs power and phone lines, AB4DQ's ham radio will become the lifeline out of Heritage Harbor.

The complete story is truly uplifting example of how those in their 70's and 80's and beyond can provide a valuable service to their communities. You can read all about the Heritage Harbour first response team at
www.hometownannapolis.com/cgi-bin/read/2008/03_02-14/TOP
(HometownAnnapolis.com)

RESCUE RADIO: WISCONSIN HAMS HELP SAVE DRIVER WHO RAN OFF THE ROAD

A pair of Wisconsin hams are being lauded for their quick action that likely saved an injured drivers life. We have more from Amateur Radio Newsline's Don Carlson, KQ6FM:

--

It happened on Wednesday, February 27th. That's when Robert Stout, WB9ECK, put out a call for assistance on the Madison 147.150 two meter repeater and was answered by Brian Sprecher, KC9LCC,. Stout told Sprecher that a car had gone off the road, broken through a guard rail and stopped just short of a creek. Stout aid that the driver was injured and trapped in his vehicle. He asked KC9LLC to inform authorities that an ambulance was needed at the scene.

Sprecher then put in a call to the county sheriff's office and relayed the

assistance call. Stout then kept Sprecher apprised of the driver's
injuries. KC9LLC used the information to give the sheriff's dispatch
updated real time information.

Stout remained at the scene providing aid until local police
arrived. Sprecher stayed on the air relaying information from Stout to the

local authorities until they relieved him of duty and sent him on his way.

For the amateur Radio Newsline, I'm Don Carlson, KQ6FM in Reno.

--

The identity of the victim and his medical condition were not known as this

newscast goes to air. (KC9GM, others)

**

RESCUE RADIO: CALIFORNIA HONORS DCS VOLUNTEERS

Twenty seven Los Angeles area hams who are members of the Carson Sheriff
Station Disaster Communications Service have been honored for their work on

behalf of the community. All received individual and group awards from for

their taking part in a wide range of emergency and public service episodes

including assisting in providing assistance during tactical alerts due to
civil unrest. The hams were also lauded for their work during the massive

wildfires that plagued the region last fall.

In expressing support to the volunteers a proclamation was issued. It said

in part that together local ham radio operators provided 7986 hours of
service to the agencies. Also that the service provided by the Carson
Station Disaster Communications Service volunteers has so far saved the
taxpayers of Los Angeles County almost $320,000.

The Carson Station Disaster Communications Service is a volunteers group
of radio amateurs who volunteer to provide communication links in the event

that more traditional communication systems are disabled due to natural or

manmade disasters. In addition to the 27 radio amateurs, thirteen
deputies, a firefighter, two station volunteers and two citizens were also

recognized at the presentation event. (ARNewsline(tm) from LA Sheriff's

Press
Release)

ENFORCEMENT: GOVERNMENT SILENCE LEADS TO FIGHT BACK WEBSITES

A new twist on the ham radio regulatory enforcement scene in the United States. This, as some radio amateurs accused of wrong doing by the Federal Communications Commission take to the World Wide Web to plead their case or denounce the regulatory agency as interfering with their right to free speech.

In the wake of a recent FCC announcement that only final actions in ham radio matters would be made public, some hams accused of Part 97 infractions are taking their story public with websites and on-line blogs of their own. The reason seems to be to let the ham radio public know that they intend to fight the government accusations made against them.

Back on January 15th the FCC announced that due to privacy concerns that it was dramatically scaling back the amount of information it would make public in regard to it Amateur Service enforcement actions. Up until then it had been common practice for the agency to release letters to individuals that require a specific response to an allegation of wrong doing, Now the only information made public are Notices of Violation, Notices of Apparent Liability to Monetary Forfeiture and other final actions in a given case.

But in a strange turn of events, this new FCC posture to protect the identifies of those accused has lead at least two or three such people to create cyberspace homes. Places on the web where they have posted the violation notices that they received along with their respective views or responses.

The reason that these sites and blogs appearing is unclear since one would think that most hams who receive letters of inquiry regarding their on-the-air operating practices would tend to want to keep the matter quiet and settle the issue well out of the public eye. It will be interesting to see how many more of these sites show up as ham radio rules enforcement continues and some on the receiving end of FCC notices going public to fight back. (ARNewsline(tm), others)

ENFORCEMENT: AMBULANCE COMPANY FINED FOR OPERATING ON AN UNAUTHORIZED FREQUENCY

Even first responders have to comply with the FCC rules as an Oregon company found out recently. The FCC affirms a $3200 monetary against Metro West Ambulance licensee of station WQBI492, in Hillsboro, Oregon. This, for willful and repeated violation of Section 1.903(a) of the Commission's Rules by operating on a frequency not authorized for it to use.

On June 11, 2007, the Enforcement Bureau's Portland Resident Agent Office issued a Notice of Apparent Liability for Forfeiture in the amount of $4,000 to Metro West after determining that the company apparently willfully and repeatedly operated on 463.2875 MHz. This is a frequency not authorized by its license. Metro West replied to the NAL on July 2, 2007.

In its response the company disputed some of the facts, arguing that the violation was not willful and not repeated, that Metro West took immediate steps to rectify the situation as soon as it was aware of the violation, and that Metro West has a history of compliance with the Commission's Rules.

In affirming its action, the FCC said that the Communications Act defines "repeated" as "the commission or omission of such act more than once or, if such commission or omission is continuous, for more than one day. It says that in this case, the evidence is clear that Metro West operated its station on 463.2875 MHz for more than one day. Therefore, it finds no merit to that argument.

It did however agree that Metro West did have a history of overall compliance with the Commission's Rules. Based on this the FCC did reduce Metro West's forfeiture amount from $4,000 to $3,200.

Metro West was given the customary 30 days to pay or to file a further appeal. (FCC)

HAM FREEWARE: WORKEDGRIDS FROM VE2ZAZ

Bertrand Zauhar, VE2ZAZ, has released his new freeware WorkedGrids, ham log grid square mapping software. The program runs only under Windows. It displays a map showing the amateur radio grid squares contacted and logged in using third-party logging program. Up to four bands can be displayed concurrently on the map. The program reads plain-text ASCII log files generated by most logging programs. WorkedGrids is directed towards the VHF and above operators who collect grid squares for contesting or award purposes. More is on-line at ve2zaz.net (ANS, VE2ZAZ)

**

NAMES IN THE NEWS: RAC ELECTS TWO NEW VP'S

Some names in the news. First up is Jim Hay, VE2VE. Hay has been elected as Radio Amateur of Canada's Vice-President, for Technical and Administrative Services. This confirms his recent assumption of responsibilities for the organizations information technology requirements.

And John Bartlett, VE1OZ, has been elected as Radio Amateur of Canada's Vice-President for Public Relations. His job is to lead efforts to develop strategies to improve membership across Canada and to promote Amateur Radio to the Canadian public. (RAC)

**

NAMES IN THE NEWS: VK2AMD TURNS 100

And words of congratulations to Australian operator Howard Booth, VK2AMD who turned 100 years of age on March 6th. Originally licensed as G2AS of Sheffield England, Booth and his then young family emigrated to Australia after the bad winters of the late 1940's, settling in Windang, NSW, some 60 miles south of Sydney. Booth, who was a builder and roofer in the U-K built his own house and still lives in it today. He is believed to be one of the oldest or even the oldest active radio amateur on the Australian continent and possibly world-wide. (WIA)

**

THE SOCIAL SCENE: QCWA AT STUART FLORIDA HAMFEST - MARCH 15

Ken Simpson, W8EK, says that the Quarter Century Wireless Association will hold an open forum at the Stuart Florida Hamfest. The date of the event is Saturday, March 15th at 11:30 a.m. Eastern Standard Time. The venue is meeting room 2 at the Martin County Fairgrounds in Stuart. More information about the hamfest is on line at www.mcaraweb.com (QCWA)

**

THE SOCIAL SCENE: CHARLESTON HAMFEST - MARCH 15

And the 24th annual Charleston West Virginia Hamfest also takes place on Saturday March 15th. Its venue is the Coonskin Armory at 1707 Coonskin

Drive in Charleston. Talk in is on the W8CHF 145.35 MHz repeater. For more information please contact our own Jim Damron. His e-mail is N8TMW at arrl dot net. (N8TMW)

**

THE SOCIAL SCENE: MICROHAMS DIGITAL SEMINAR - MARCH 22

The second annual MicroHAMS Digital Seminar is slated for Saturday, March 22nd on the Microsoft campus in Redmond, Washington. The program includes a wide variety of topics centered around digital communications and Amateur radio. Lunch and snacks are included with the price of the conference and there will be free Internet access. Because of space limitations and parking requirements pre-registering is suggested, More is on line http://www.microhams.com/digitalconference (W7LRD, ANS)

HAM HONORS: 2008 YHOTY NOMINATIONS BEING SOUGHT

In case you have not heard the announcement at the end of the newscast the past few weeks, the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year Award. The award honors a licensee 18 years old or younger who has used ham radio to significantly contribute to the benefit of the Amateur Radio Service, to the state of the communications art, to the community or the nation.

Any FCC or Industry Canada licensed radio amateur, age 18 or younger, residing in the United States 50 states, plus Puerto Rico and the Canadian Provinces is eligible to be nominated for this award. To obtain a nominating form, send a self-addressed, stamped envelope to 2008 Young Ham of the Year Award, c/o Newsline, 28197 Robin Ave, Santa Clarita, California, 91350, or download the form from www dot yhoty dot org. Nominations may be electronically submitted at the website, but supporting materials must be submitted separately.

Presentation of the 2008 YHOTY Award will take place in August at the Huntsville Hamfest in Alabama. Again, more information is in cyberspace at our special website at www.yhoty.org. (ARNewsline(tm))

EMERGING TECHNOLOGY: GERMAN PUBLIC RADIO TO ABANDON EUREKA 147

A once prominent digital audio broadcasting format soon could be a technical achievement of the past in one European nation. This, as an oversight organization in Germany says its time to stop supporting Eureka 147. Jim Damron, N8TMW, has the details:

--

The organization responsible for setting fiscal policy for public broadcasting in Germany has deemed the Eureka-147 Digital Audio Broadcasting codec unworthy of further investment. The KEF which oversees the financial aspect of DAB is calling for the equivalent of about $246 million slated to fund public-service DAB projects from 2009 to 2012 to be reallocated to other projects.

Since 2001, some $266 million has been allocated to KEF for Digital Audio Broadcasting projects. In explaining its recommendation to halt such funding after 2008, KEF said that receiver options remained limited in Germany and that public support for FM radio and the availability of satellite radio, Internet radio, podcasts and other outlets have changed the nature of radio broadcasting since DAB was first envisioned.

I'm Jim Damron, N8TMW.

--

But there is some strong opposition to such a phase out. A group called the Initiative Marketing Digital Radio is a European consortium of receiver manufacturers, transmitter network operators, program providers and institutions backing the DAB standard. It warns that Germany moving away from Eureka 147 could cause chaos. It says this is because the digitalization of broadcasting is unstoppable. (RW)

**

WORLDBEAT - UK: BBC CLOSES SHORTWAVE TO EUROPE

The British Broadcasting Company has announced that all its shortwave radio transmissions to Europe ceased on 18th February 2008. The U-K based broadcaster says that it recognize that this will be a loss to some of their listeners, its managers point out that BBC World Service radio programs are delivered to Europe via other platforms including longwave at night.

The BBC's World Service grew from the original British Empire Service which

was inaugurated in 1932. Last year the BBC celebrated its 75th anniversary

and today boasts an estimated world audience of some 180 million.

According to the announcement, only the analog shortwave transmissions to Europe are affected. The experimental Digital Radio Mondiale or D-R-M transmissions for North East continental Europe will continue unaffected. Full details of World Service sound broadcasts can be found on

the web at bbc.co.uk/worldservice. (GB2RS)

DX

In DX, NZ5N reports that he will be operating the satellites during the upcoming Swan Island Dxpedition as HQ8R from March 15th to the 23rd. Bill

will be taking along an FT-817 and an Arrow antenna to work the birds. Time permitting, he will also try to make a few contacts before and

after the expedition from the Honduran mainland. Weather permitting, he may

also try to give out grid square EK 76 from the boat on the way to and from

the island. QSL as directed by the operator.

The 2007 Equatorial Guinea 3C7Y DXpedition to has been approved for DXCC credit. If you had cards rejected for this operation, please send an e-mail to the ARRL's DXCC Desk to have your record updated.

Beginning on Sunday the 9th of March, a week-long expedition will operate from various castles and forts on the Isle of Man. Club calls GT4KPT, GT8LED and GT3GWB will used. They expect to activate several Worked All Britain areas during the week.

And G3RWF is active from Uganda as 5X1NH until March 22nd. His operation will be limited because he is on holiday but he expects to operate all of the High Frequency bands except 160 meters. Modes will be CW, SSB, RTTY and PSK. He will run 100 watts to wire antennas. QSL to G3RWF.

Last but by no mean least, F8CHM will be active as FR5EZ from Reunion Island until March 21st. He expects to be active on the High Frequency bands as well as 6 meters on CW and SSB. QSL to his callbook address.

(Above from various DX news sources)

**

THAT FINAL ITEM: LIGHTNING AND ICE FOR SALE

And finally this week, a company that hams and broadcasters have come to rely on for lightning protection devices is up for sale. Its up for sale on eBay. The company is Industrial Communication Engineers. Its located in Indianapolis, Indiana here in the U-S-A and that's where you will also

find Amateur Radio Newsline's Jack Parker, W8ISH:

--

Better up that limit on your Pay Pal account. This business opportunity could cost you a pretty penny. Long time amateur radio operator Mike Koss

W9SU is hanging up his test leads and putting his company on the eBay auction block. Going price is a cool 2-point-7 million dollars. Koss has

spent the past 18 years building up his electronic products business. So why auction the business on eBay?

SOT: "eBay is one way you can advertise anything including a business. And there are
And it can be seen by the entire world. The total cost of the ad on eBay was 14-dollars".

This may be the first time an electronics manufacturer has been auctioned on eBay. For 2-point-seven-mil, Koss says you get a large product and parts inventory, circuit designs, established customer base, 800 number and

two new patents for electro-magnetic pulse and nuclear electro-pulse arrestors that have not yet been marketed.

So if lightning strikes and he gets an offer, what is this 40 year veteran

of amateur radio going to do now?
Koss: "Becoming somewhat of a semi-professional DXer has always been kind

of a keen interest. Ah, go back and sort of be a kid again",
Mike's world class ham radio station includes six tall towers that make great lightning rods. Its all protected by his patented lightning protection equipment. It's that ham station that Koss would like to spend

more time operating. He says the stress of running a business and getting

gray hair lead to his decision to auction the business on eBay and enjoy retirement.

Koss: "I'll probably travel a little bit because I haven't done very much
of that in my lifetime and I'd like to write a book".

Koss says the book would detail the finite science of tower installation, lightning protection and proper grounding techniques. It could be a golden idea that earns him enough pocket change to enjoy the best of amateur radio and his well earned retirement.

Reporting from Indianapolis, this is Jack Parker W8ISH.

--

Amateur Radio operators world-wide depend on Industrial Communication Engineers lightning protection equipment to keep their stations safe from Mother Nature. Many hope that Mike Koss, W9SU, is successful in finding someone to keep it going for many years to come while permitting him a lot

more time on the radio. (ARNewsline(tm), W9IND)

==> ARRL "ANTENNA EXPERT" TO RETIRE

R. Dean Straw, N6BV, best known to Amateur Radio operators as the "ARRL antenna expert," has announced his retirement, effective March 31. Straw's main responsibility at ARRL has been shepherding and shaping "The ARRL Antenna Book" since he took over as editor in 1993 from Jerry Hall, K1TD.

"Jerry was one of my Elmers in Hawaii back in the early 1960s. He had been the editor of "The Antenna Book" for many years, and when he decided to retire he suggested I put my name in for the position of editor," Straw said. "At that time, I had been in the marine electronics industry for more than 20 years and I wanted to 'give something back' to this great hobby we call Amateur Radio. Now, looking back, it's been a gratifying 15 years that I've been privileged to work at ARRL."

While at ARRL, Straw specialized in antennas, transmission lines and propagation. "I have been able to utilize my training as an electronics engineer in other areas where I could help out. I've enjoyed being associated with some remarkable people at ARRL -- folks who are truly dedicated not only to preserving the legacy of Amateur Radio, but to taking Amateur Radio forward in the 21st century."

In his 15 year tenure at ARRL, Straw served as Senior Assistant Technical Editor in the Publications Group. He was Editor of "The ARRL Antenna Book" for five Editions (17th-21st Editions), Editor of "The ARRL Antenna Compendium" series (Volumes 4-7), as well as several editions of "The ARRL Handbook." He was co-author of "Simple and Fun Antennas for Hams" with Chuck Hutchinson, K8CH.

A frequent contributor to QST (he most recently served as the handling editor for the "Hints & Kinks" column) and NCJ, Straw has also been Editor of numerous ARRL books: "ON4UN's Low-Band DXing" (4th Edition), "Low-Profile Amateur Radio," "The ARRL DXCC Handbook," "DXing on the Edge," "Amateur Radio on the Move," "Antenna Zoning for the Radio Amateur" and the ARRL Continuing Education "Antenna Modeling" course.

ARRL Publications Manager and QST Editor Steve Ford, WB8IMY, said, "Back when I first joined the HQ staff, Dean Straw was the man who introduced me to the wonders of ladder line. Before I encountered Dean, I had never heard of ladder line, and I had no idea that this strange-looking feedline could be used with an antenna tuner, giving multiband HF operation with one ordinary wire dipole. Needless to say, it worked -- Dean has been my antenna Elmer ever since. Through all his books and QST articles over the years, Dean has fulfilled the same Elmer role for many. He will be greatly missed."

Straw said, "The Lord has been good to me -- how many people can truly say that their vocation has been their beloved avocation too? My wife has consistently maintained over the years: 'You're having entirely too much fun in this job!'"

==> ARRL ANNOUNCES COLVIN AWARD RECIPIENTS

The ARRL has granted Colvin Awards to three 2008 DXpeditions: The recently completed VP6DX Ducie Island DXpedition <http://ducie2008.dl1mgb.com/index.php> and the upcoming operations from the TX5C DXpedition to Clipperton Island <http://www.clipperton2008.org/> and the 9X0R DXpedition to Rwanda <http://www.9x0r.com/>. These three DXCC entities appear high-up on the most-wanted lists.

The VP6DX DXpedition was on the air from February 11-27. Carsten Esch, DL6LAU, and Eric Scace, K3NA, led the 13-member team to the small island 540 kilometers east of Pitcairn Island in the South Pacific. This DXpedition made 183,686 contacts, the largest number of contacts made by any radio DXpedition. The previous record had been held since February 2001 by the Five Star DX Association's DXpedition to the Comoros Island, D68C. Ducie Island was ranked as #25 on the DXCC list of most-wanted entities.

The VP6DX DXpedition broke many other records, including:
* The largest number of RTTY contacts, previously held by the Swains Island N8S DXpedition in April 2007.
* The largest number of SSB (voice) contacts, previously held by the Comoros Island D68C DXpedition.
* The largest number of contacts on 40 meters, previously held by the Libya 5A7A DXpedition in November 2006.
* The largest number of contacts on 30 meters, previously held by the St Brandon Island 3B7C DXpedition in September 2007.
* The largest number of contacts on 17 meters, previously held by the Swains Island N8S DXpedition.
* The largest number of contacts with North America, previously held by the Comoros Island D68C DXpedition.
* The largest number of contacts with South America, previously held by the Peter I Island 3Y0X DXpedition in February 2006.
* The largest number of contacts with Africa, previously held by the Rodrigues Island 3B9C DXpedition in March-April 2004.

An overseas possession of France, Clipperton Island is a coral atoll in the North Pacific. About nine square kilometers, it lies southwest of Mexico and west of Costa Rica and has no permanent inhabitants. Bob Grimmick, N6OX, will lead an international team of 21 amateurs to the atoll for a DXpedition set to begin March 7 for 10 days. Clipperton currently ranks as #21 on the DXCC list of most-wanted entities. Logs will be uploaded to Logbook of the World <http://www.arrl.org/lotw/> once TX5C's official log has been certified.

TX5C plans to operate on 6-160 meters: "We will nearly always be working split and will regularly announce our listening frequencies. Our goal is to make over 100,000 QSOs and will pay special attention to working some of the more difficult areas like Europe and the Middle East." The TX5C bandplan is available at <http://www.clipperton2008.org/dxpedition/bandplan.htm>.

An important goal of the TX5C DXpedition is furthering the knowledge of Clipperton and its ecosystem. As part of the application for the landing permit, the TX5C team agreed that certain scientific studies would be performed during their stay on the atoll, such as setting up a weather station, recording tide times and observation of native bird species. These studies will be conducted under the auspices of Christian Jost, director of the Geographical Research Center of Paul Verlaine University in Metz.

Antonio Gonzalez, EA5RM, will lead a 13-member team to Rwanda, a small landlocked country in the Great Lakes region of east-central Africa. The 9X0R team plans to be on the air from March 16-27. They will operate on 10-160 meters on CW, SSB and digital modes. Rwanda has not been on the air since late 1997 and currently ranks as #45 on the DXCC list of most-wanted entities. The 9X0R bandplan is available at <http://www.9x0r.com/operation/>.

Gonzalez said the Rwanda Utilities Regulatory Agency (RURA) is trying to establish rules regarding Amateur Radio in Rwanda: "Right now there is not an easy way to get an Amateur Radio license here, but in a few months things should be different and ham radio activities will start to be more usual from this country."

According to Gonzalez, a group of Rwandan amateurs, with the help of RURA, are trying to establish the Rwanda Amateur Radio Union (RARU) as the national Amateur Radio society in that country. He said that the RARU will be applying for membership in the International Amateur Radio Union (IARU) soon.

The Colvin Award was established in 1994 with the proceeds of a life insurance policy purchased by renowned DXer Lloyd Colvin, W6KG (SK), naming the League as beneficiary. The award is conferred in the form of grants in support of Amateur Radio projects that promote international goodwill in the field of DX. The awards guidelines favor multi-national teams with strong ethics and good QSLing policies including the use of Logbook of the World. From the 1960s into the early 1990s, Lloyd Colvin and his wife Iris, W6QL, activated more than 100 DXCC entities. Lloyd Colvin died in 1993 and Iris Colvin in 1998.

==> ARRL SOLICITING NOMINATIONS FOR 2007 HIRAM PERCY MAXIM AWARD

The ARRL invites nominations for the 2007 Hiram Percy Maxim (HPM) Memorial Award <http://www.arrl.org/FandES/field/awards/hpm.html>. The League's premier youth recognition, the HPM Memorial Award goes annually to a radio amateur under age 21 in recognition of the recipient's accomplishments and contributions "of the most exemplary nature" to both the Amateur Radio community and the local community during the previous calendar year -- 2007 in this instance.

Nomination criteria may include:

* Participation or leadership in organizational affairs at the local or

national level (for example, local radio club, ARES, net control, participation in civic groups).
* Technical achievement (building radios, putting up an antenna and such).
* Operating record (for example, nets, disaster drills, contests, ARRL November Sweepstakes, etc).
* Recruitment and training of new amateurs (for example, helped teach a license class, JOTA, etc).
* Public relations activities (for example, create a ham radio Web page).

To nominate a deserving candidate, submit a completed nomination form <http://www.arrl.org/FandES/field/awards/hpm.html> to your ARRL Section Manager (SM), along with any supporting information and endorsements of ARRL-affiliated clubs and elected or appointed League officials. SMs make the formal nominations. There is no limit to the number of nominations an individual or club may submit to an SM, and SMs may nominate more than one individual. SMs need to have all information in sufficient time to submit a formal nomination to ARRL Headquarters by March 31. A list of SMs is available on page 16 of any issue of QST or on the ARRL Web site <http://www.arrl.org/FandES/field/org/smlist.html>.

Nomination forms and supporting information should document as thoroughly as possible the Amateur Radio achievements and contributions of the nominee during the previous calendar year. ARRL must receive all supporting documentation by April 15. An award panel reviews the nominations and selects the winner.

HPM Memorial Award winners receive a cash award of $1500 and an engraved plaque. For more information, contact Steve Ewald, WV1X <wv1x@arrl.org>, tel 860-594-0265.

==> APRIL QST ON THE WAY TO YOUR MAILBOX

The April issue of QST is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting, the upcoming issue of QST has something for just about everyone.

Larry Scheff, W4QEJ, discusses what you need to do to protect your house -- and your shack -- from a lightning strike in "Lightning: Understand it or Suffer the Consequences -- Part 2." ARRL News Editor S. Khrystyne Keane, K1SFA, takes a look at the first 2008 meeting of the ARRL Board of Directors in her article "ARRL Board Authorizes New Section Positions, Adopts Budget, More, at 2008 Annual Meeting." Paul Pescitelli, K4UJ, and Tom Harwell, N4XP, take readers to a coral reef in the South China Sea in their cover article, "The 2007 DXpedition to Scarborough Reef."

In his monthly column "This Month in Contesting," ARRL Contest Branch Manager Sean Kutzko, KX9X, talks about how those new to radiosport can get their feet wet. He gives his picks for the best contests for those wanting to try out contesting for the first time, especially those new to the digital modes. Read about the results of the 2007 ARRL International EME Competition and go ahead and start planning for the 2008 IARU HF Championship, scheduled for July 12-13. Find out about other upcoming contests in this month's Contest Corral.

ARRL Technical Advisor Bruce Prior, N7RR, reviews the Elecraft K3 HF/6 Meter Transceiver. According to the ARRL Lab test results, "Elecraft's K3/10 modular kit is easy and enjoyable to assemble. Once built, you're rewarded with a feature-laden transceiver with receiver performance rivaling the best available at any price. You can customize your radio with a wide range of options at any time as your interests and needs change." ARRL Product Contributing Editor Howard Robins, W1HSR, reviews the Kenwood TH-D7A(G) Dual Band Handheld, saying this radio "is a full-featured dual band handheld that works well, is easy to use and expands on the original model's APRS capabilities."

Of course, there are the usual columns you know and love in the April QST: Hints & Kinks, The Doctor Is IN, How's DX, Old Radio, Hamspeak and more. Look for your April issue of QST in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> NEW EDITION OF "ARRL INSTRUCTOR'S MANUAL" NOW AVAILABLE

The fourth edition of the "ARRL Instructor's Manual" <http://www.arrl.org/catalog/?item=1263> is designed to coordinate classroom instruction with the current ARRL student manuals for Technician and General Class licensing, "The ARRL Ham Radio License Manual" and "The ARRL General Class License Manual."

The lesson plans and instructional PowerPoint presentations in the new edition of the Instructor's Manual have been developed by ARRL Education & Technology Program Manager Mark Spencer, WA8SME, and are intended to provide an outline for instruction. Instructors can customize these lesson plans and materials to fit their course format, addressing the needs of a particular audience.

ARRL Education Services Manager Debra Johnson, K1DMJ, said, "We encourage instructors to think of the provided PowerPoint presentations, along with our instruction materials, as teaching aids -- one tool among many in your instructional toolbox." Get your copy today at the ARRL Online Store <http://www.arrl.org/catalog/>.

==> FCC ENFORCEMENT ACTIONS

Special Counsel in the FCC Spectrum Enforcement Division Riley Hollingsworth sent a Warning Notice to Amanda F. Spenlinhauer, KB1CQX, of Wells, Maine, reminding her that "the trustees of the N1KMA, N1VAR, KQ1L and the repeaters operating under the WA1ARN call sign have requested in writing that you refrain from use of the repeater." These requests, the Commission, noted, were due to Spenlinhauer's "failure to follow operational rules set forth by the licensee/control operators of the repeater system for its users and FCC rules." Spenlinhauer had been issued verbal requests to refrain from using the repeaters in the past, but she has, according to the Warning Notices, "apparently ignored both verbal and written requests."

Warned that the FCC would initiate enforcement action against her license -- which can include revocation, monetary forfeiture or a "modification proceeding to restrict the frequencies on which [she] may operate KB1CQX" -- Spenlinhauer was informed by the Commission that she was "expect[ed] to abide by the request to stay off the repeater systems and any other such request by a repeater licensee, control operator or trustee." Fines normally range from $7500-$10,000.

Hollingsworth also pointed out that Spenlinhauer's Amateur Radio license was set to expire on April 7, 2008. "Please be advised," Hollingsworth said, "that your license will not be routinely renewed unless this matter is resolved."

Hollingsworth also sent a an inquiry into interference from a Part 15 device to a licensee in Holmen, Wisconsin, and a Warning Notice concerning interference on 10 meters from an unlicensed station in Harmony, North Carolina. Two cases were opened by the Commission regarding unlicensed transmissions on non-amateur frequencies by amateur licensees in Zebulon and Pikeville, North Carolina. The Appalachian Power Company in Charleston, West Virginia also received a letter from the FCC regarding radio frequency interference from power line hardware to an Amateur Radio licensee.

Direct all questions concerning the Amateur Radio Service Enforcement Actions Web postings via e-mail only to Riley Hollingsworth <fccham@fcc.gov> in the FCC Spectrum Enforcement Division

==>SOLAR UPDATE

Tad "When the flush of a new-born Sun fell first on Eden's green and gold" Cook, K7RA, this week reports: Following five days of no sunspots, we saw one (number 984) on March 5 and 6, but it is fading off the west limb of the Earth-facing portion of the Sun. Solar activity is still very low. Sunspot numbers for February 28-March 5 were 12, 0, 0, 0, 0, 0 and 13 with a mean of 3.6. The 10.7 cm flux was 70, 69.8, 68.6, 69.2, 68.4, 68.3 and 69.3 with a mean of 69.1. Estimated planetary A indices were 22, 27, 19, 8, 5, 4 and 8 with a mean of 13.3. Estimated mid-latitude A indices were 17, 18, 13, 8, 4, 3 and 7, with a mean of 10. For next week, NOAA and the US Air Force predict planetary A index of 5, 15, 15, 10, 10, 15 and 10 for March 7-13. Geophysical Institute Prague predicts unsettled to active conditions March 7, active geomagnetic conditions March 8 and unsettled conditions March 9-13. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the NCCC Sprint is March 7. The AGCW QRP Contest and SOC Marathon Sprint are March 8. The RSGB Commonwealth Contest, the Oklahoma QSO Party, the EA PSK31 Contest and the Idaho QSO Party are March 8-9. The North American Sprint (RTTY), the SKCC Weekend Sprintathon, the UBA Spring Contest (CW) and the NSARA Contest are March 9. The Wisconsin QSO Party is March 9-10 and the CLARA and Family HF Contest is March 11-12. The RSGB 80 Meter Club Championship (CW) is March 12. Next weekend, the NCCC Sprint is March 14. The AGCW VHF/UHF Contest, Feld Hell Sprint and the 10-10 International Mobile Contest are on March 15. The Russian DX Contest is March 15-16 and the Virginia QSO Party is March 15-17. The UBA Spring Contest (6 meters) and the 9K 15 Meter Contest are both March 16. On March 17, look for the Run for the Bacon QRP Contest and the Bucharest Contest. The NAQCC Straight Key/Bug Sprint and the RSGB 80 Meter Club Championship (SSB) are scheduled for March 20. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, March, 9, 2008, for these online course sessions beginning on Friday, March, 21, 2008: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Larry Scheff, W4QEJ, Wins February QST Cover Plaque Award: The winner of the QST Cover Plaque Award for February is Larry Scheff, W4QEJ, for his article "Lightning: Understand It or Suffer the Consequences -- Part 1." Congratulations, Larry! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web

page <http://www.arrl.org/members-only/qstvote.html>. Cast a ballot for your favorite article in the March issue by Monday, March 31.

* ARRL to Close in Observance of Good Friday: ARRL Headquarters will be closed in observance of Good Friday on Friday, March 21. There will be no W1AW bulletin or code practice transmissions that day. "The ARRL Letter" will be posted a day early on Thursday, March 20; there will be no "ARRL Audio News" that week. ARRL Headquarters will reopen Monday, March 24 at 8 AM Eastern Daylight Time. We wish everyone a safe and enjoyable holiday weekend.

* Nominations Invited for 2008 Young Ham of the Year Award: Nominations are now being accepted for the 2008 Amateur Radio Newsline Young Ham of the Year (YHOTY) Award. The award honors a licensee 18 years old or younger who has used ham radio to significantly contribute to the benefit of the Amateur Radio Service, to the state of the communications art, to the community or the nation. This year, nominations are being accepted for Amateur Radio operators living in the US, Puerto Rico and the 10 Canadian provinces. Nominations and supporting materials must be submitted before May 30, 2008, on an official application. To obtain a nomination form, send a self-addressed, stamped envelope to 2006 Young Ham of the Year Award, c/o Newsline, 28197 Robin Ave, Santa Clarita, CA 91350, or download the form from the Internet <http://www.yhoty.org/pdf/YHOTY_2008_Nomination_Form.pdf>. Nominations may electronically submitted using a Web form <http://www.yhoty.org/nomination-form.htm>, but supporting materials must be submitted separately. Presentation of the 2008 YHOTY Award will take place in August at the Huntsville Hamfest in Alabama. There's more information on the YHOTY Web site <http://www.yhoty.org/>.

* ARRL DXCC Desk Approves 3C7Y Operation: ARRL DXCC Manager Bill Moore, NC1L, reports that the 2007 3C7Y DXpedition to Equatorial Guinea has been approved for DXCC credit. "If you had cards rejected for this operation, please send an e-mail <dxcc@arrl.org> to the ARRL DXCC Desk to have your DXCC record updated," Moore said.

* Daylight Saving Time Begins this Weekend: Don't forget to set your clocks ahead one hour -- daylight saving time begins Sunday, March 9 at 2 AM local time.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Amateur Radio Newsline(tm) Report 1595 - March 7, 2008 (REVISED)

Amateur Radio Newsline report number 1595 with a release date of Friday, March 7th, 2008 to follow in 5-4-3-2-1.

A big win for a Maryland ham as the states Supreme Court turns away a neighbors appeal in a tower case; the FCC says that Morse testing will not

return and a ham who wants to retire has his business foe sale on eBay. Why eBay you ask? Find out on Amateur Radio Newsline(tm) report number 1595 coming your way right now.

(Billboard Cart Here)

RADIO LAW: SUPREME COURT TURNS AWAY TOWER CASE - BIG WIN FOR HAM

The Supreme Court has declined to hear the case involving a set of ham radio towers on in the town of Poolesville. That's good news for the ham

who has been fighting to keep them. Amateur Radio Newsline's Bruce Tennant, K6PZW, explains:

--

The Supreme Court has decided against being involved in the case where neighbors of John Evans, N3HBX, had sued after he obtained a permit and installed several 100 foot and higher radio towers as part of a contest station. The neighbors claimed the installation would devalue their property and that the installation was an eyesore.

The case began back on August 30th, 2004 when neighbors of Evans antenna farm went to the Board of Appeals on Aug. 30, 2004, less than a month after

construction began on the towers. The Board dismissed the neighbors' complaint that the tower permit was issued in error in November 2004. It said that the 30 day window of opportunity to appeal the permit had passed.

The permit had been issued June 23rd, but the neighbors claim they first learned of the project when construction equipment arrived on August 5th .

Two neighbors of Evans 44 acre property, Thomas Burruss and Alan Gaunoux, filed the lawsuit in August 2004. The case eventually wound up in the Maryland Court of Appeals, which upheld the Board's original finding that

the neighbors were too late to contest the permit. It did instruct the appeals board to decide if not notifying the neighbors had denied them of their due process property rights. The board found that the neighbors did

not have any due process rights to Evans' land. This is the decision the

neighbors ultimately took to the Supreme Court.

According to the lower court findings, Evans, who said he has spent $160,000 in legal fees, was within his rights to build the towers and followed the proper procedures. The county permitted the towers as an allowable accessory use, much like a swimming pool, detached garage or shed, according to county Board of Appeals documents and other published reports. His attorney Steven Van Grack says that as a matter of law, the towers were constructed legally.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

Though the Supreme Court ruling was the end of the road for the administrative case, the neighbors also filed a civil lawsuit against Evans

in Circuit Court in August 2004. Its been on hold until the administrative

case concluded. (Gazette.net)

**

BREAKING DX NEWS: SPRATLY ISLANDS COMING OIN THE AIR

If you have waited a ham radio lifetime to work the very elusive Spratly Islands, wait no longer. This with word that Ed Sawyer N1UR and his wife Christine, KB1PQN are expected to be active portable 9M6 from the Layang-Layang Island Resort in the Spratly Islands. This, between 0800 UTC

on , March 22nd through midnight UTC on March 30th.

The duo have already received their licenses. Once they get permission from

the Navy, they will apply for a special 9M0 callsign. Activity will be on 160 through 10 meters, on CW and SSB. 100 watts to omnidirectional verticals will be used from the near-by beach and the operators will be moving bands frequently to take advantage of changing band conditions and openings. Sunset on Spratly is 1040 UTC with sunrise at 2240 by the middle

of that week.

QSL cards for either operator go via Bob Tomkovich, Jr., K2RET, 405 Hemlock

Dr., Lanoka Harbor, NJ 08734 in the USA. More information is on line at www dot n1urspratly dot com. We will have more DX news later on in this weeks Amateur Radio Newsline report. (OPDX)

**

THE BPL WAR: SARL SAYS NO TO PLT / BPL

The South African Radio League will be taking a very tough stance in its fight to stop the proliferation of Broadband over Powerline Internet access in that nation. According to a society news release, while the draft regulations for the introduction of what they call Powerline Internet Transmission or PLT go some way to protect the High Frequency radio spectrum from interference the general consensus was that the regulations do not go far enough. SARL says that interference limits, the lack of compulsory notching of the Amateur bands and the inadequate mitigation process were identified as some of the issues left open.

The decision was reached following a nationwide net on Sunday, February 24th where the draft PLT regulations and the negative impact the licensing of Powerline Internet Transmission in South Africa will have on HF communication were discussed. The South African Radio League also received input from experts in the field and a major assistance from the ARRL laboratory which has been dealing with BPL interference issues for several years. (SARL)

**

RADIO LAW: FCC SAYS NO TO MORSE RECONSIDERATION REQUESTS

The FCC has said no to a pair of proposals that had asked for the restoration of Morse testing for a qualification to become and hold a United States Amateur Radio license. In a Memorandum Opinion and Order released February 28th, the FCC denied two petitions calling for General or Amateur Extra license applicants to demonstrate proficiency in Morse code.

In the wake of the FCC's actions to do away with Morse testing, two amateurs submitted separate petitions asking the agency to bring back Morse testing. Anthony Gordon, KG6EQM, objected to the FCC eliminating the telegraphy examination element as an examination requirement for the Amateur Extra Class operator license. Russell Ward, W4NI, requested the FCC reconsider its decision for strictly procedural reasons.

In denying both requests the FCC reiterated its prior conclusion that an individual's ability to demonstrate Morse code proficiency does not further the underlying purposes of the Part 97 rules. It appears to be of the opinion that Morse does not accommodate individual contributions to the advancement of the radio art and to enhance the value of the amateur service to the public.

In December 2006, the FCC decided to drop the Morse code requirement for all Amateur Radio license classes. At the time the commission decided to drop the Morse Code exam, it said knowing Morse is not necessarily indicative of an individual's ability to contribute to the advancement of

ham radio. The agency also said emergency communication today is performed

using voice, data or video modes. The agency claims that all of these are

much faster than telegraphy.

The FCC said it received roughly 100 comments on the reconsideration request. It says that most were overwhelmingly negative. (RW, ARRL, FCC)

**

RECUE RADIO: MARYLAND SENIORS FORM FIRST RESPONSE TEAM

A story in the March 5th edition of Hometown Annapolis dot com proves that

you do not have to be young to be an emergency planner. A story titled Heritage Harbour's Detailed Plans Impress County Officials tells the story

of how senior citizens in a planned Maryland community have put together a

first response unit that includes everything from stockpiling food and medical supplies to communicating with the world using Amateur Radio.

In this case the communications hub is the garage of Heritage Harbour resident Walter Van Gieson, AB4DQ. Van Gieson was a radio operator who served in the military during World War II. According to the news article,

in the event a disaster severs power and phone lines, AB4DQ's ham radio will become the lifeline out of Heritage Harbor.

The complete story is truly uplifting example of how those in their 70's and 80's and beyond can provide a valuable service to their communities. You can read all about the Heritage Harbour first response team at
www.hometownannapolis.com/cgi-bin/read/2008/03_02-14/TOP
(HometownAnnapolis.com)

RESCUE RADIO: WISCONSIN HAMS HELP SAVE DRIVER WHO RAN OFF THE ROAD

A pair of Wisconsin hams are being lauded for their quick action that likely saved an injured drivers life. We have more from Amateur Radio Newsline's Don Carlson, KQ6FM:

--

It happened on Wednesday, February 27th. That's when Robert Stout, WB9ECK, put out a call for assistance on the Madison 147.150 two meter repeater and was answered by Brian Sprecher, KC9LCC,. Stout told Sprecher that a car had gone off the road, broken through a guard rail and stopped just short of a creek. Stout aid that the driver was injured and trapped in his vehicle. He asked KC9LLC to inform authorities that an ambulance was needed at the scene.

Sprecher then put in a call to the county sheriff's office and relayed the assistance call. Stout then kept Sprecher apprised of the driver's injuries. KC9LLC used the information to give the sheriff's dispatch updated real time information.

Stout remained at the scene providing aid until local police arrived. Sprecher stayed on the air relaying information from Stout to the local authorities until they relieved him of duty and sent him on his way.

For the amateur Radio Newsline, I'm Don Carlson, KQ6FM in Reno.

--

The identity of the victim and his medical condition were not known as this newscast goes to air. (KC9GM, others)

RESCUE RADIO: CALIFORNIA HONORS DCS VOLUNTEERS

Twenty seven Los Angeles area hams who are members of the Carson Sheriff Station Disaster Communications Service have been honored for their work on behalf of the community. All received individual and group awards from for their taking part in a wide range of emergency and public service episodes including assisting in providing assistance during tactical alerts due to civil unrest. The hams were also lauded for their work during the massive

wildfires that plagued the region last fall.

In expressing support to the volunteers a proclamation was issued. It said

in part that together local ham radio operators provided 7986 hours of service to the agencies. Also that the service provided by the Carson Station Disaster Communications Service volunteers has so far saved the taxpayers of Los Angeles County almost $320,000.

The Carson Station Disaster Communications Service is a volunteers group of radio amateurs who volunteer to provide communication links in the event

that more traditional communication systems are disabled due to natural or

manmade disasters. In addition to the 27 radio amateurs, thirteen deputies, a firefighter, two station volunteers and two citizens were also

recognized at the presentation event. (ARNewsline(tm) from LA Sheriff's Press Release)

**

ENFORCEMENT: GOVERNMENT SILENCE LEADS TO FIGHT BACK WEBSITES

A new twist on the ham radio regulatory enforcement scene in the United States. This, as some radio amateurs accused of wrong doing by the Federal

Communications Commission take to the World Wide Web to plead their case or denounce the regulatory agency as interfering with their right to free speech.

In the wake of a recent FCC announcement that only final actions in ham radio matters would be made public, some hams accused of Part 97 infractions are taking their story public with websites and on-line blogs of their own. The reason seems to be to let the ham radio public know that they intend to fight the government accusations made against them.

Back on January 15th the FCC announced that due to privacy concerns that it

was dramatically scaling back the amount of information it would make public in regard to it Amateur Service enforcement actions. Up until then

it had been common practice for the agency to release letters to individuals that require a specific response to an allegation of wrong doing, Now the only information made public are Notices of Violation, Notices of Apparent Liability to Monetary Forfeiture and other final actions in a given case.

But in a strange turn of events, this new FCC posture to protect the identifies of those accused has lead at least two or three such people to create cyberspace homes. Places on the web where they have posted the violation notices that they received along with their respective views or responses.

The reason that these sites and blogs appearing is unclear since one would

think that most hams who receive letters of inquiry regarding their on-the-air operating practices would tend to want to keep the matter quiet

and settle the issue well out of the public eye. It will be interesting to

see how many more of these sites show up as ham radio rules enforcement continues and some on the receiving end of FCC notices going public to fight back. (ARNewsline(tm), others)

ENFORCEMENT: AMBULANCE COMPANY FINED FOR OPERATING ON AN UNAUTHORIZED FREQUENCY

Even first responders have to comply with the FCC rules as an Oregon company found out recently. The FCC affirms a $3200 monetary against Metro

West Ambulance licensee of station WQBI492, in Hillsboro, Oregon. This, for willful and repeated violation of Section 1.903(a) of the Commission's

Rules by operating on a frequency not authorized for it to use.

On June 11, 2007, the Enforcement Bureau's Portland Resident Agent Office

issued a Notice of Apparent Liability for Forfeiture in the amount of $4,000 to Metro West after determining that the company apparently willfully and repeatedly operated on 463.2875 MHz. This is a frequency not

authorized by its license. Metro West replied to the NAL on July 2, 2007.

In its response the company disputed some of the facts, arguing that the violation was not willful and not repeated, that Metro West took immediate

steps to rectify the situation as soon as it was aware of the violation, and that Metro West has a history of compliance with the Commission's Rules.

In affirming its action, the FCC said that the Communications Act defines "repeated" as "the commission or omission of such act more than once or, if such commission or omission is continuous, for more than one day. It says

that in this case, the evidence is clear that Metro West operated its station on 463.2875 MHz for more than one day. Therefore, it finds no merit to that argument.

It did however agree that Metro West did have a history of overall compliance with the Commission's Rules. Based on this the FCC did reduce

Metro West's forfeiture amount from $4,000 to $3,200.

Metro West was given the customary 30 days to pay or to file a further appeal. (FCC)

HAM FREEWARE: WORKEDGRIDS FROM VE2ZAZ

Bertrand Zauhar, VE2ZAZ, has released his new freeware WorkedGrids, ham log

grid square mapping software. The program runs only under Windows. It displays a map showing the amateur radio grid squares contacted and logged

in using third-party logging program. Up to four bands can be displayed concurrently on the map. The program reads plain-text ASCII log files generated by most logging programs. WorkedGrids is directed towards the VHF and above operators who collect grid squares for contesting or award purposes. More is on-line at ve2zaz.net (ANS, VE2ZAZ)

**

NAMES IN THE NEWS: RAC ELECTS TWO NEW VP'S

Some names in the news. First up is Jim Hay, VE2VE. Hay has been elected

as Radio Amateur of Canada's Vice-President, for Technical and Administrative Services. This confirms his recent assumption of responsibilities for the organizations information technology requirements.

And John Bartlett, VE1OZ, has been elected as Radio Amateur of Canada's Vice-President for Public Relations. His job is to lead efforts to develop

strategies to improve membership across Canada and to promote Amateur Radio

to the Canadian public. (RAC)

**

NAMES IN THE NEWS: VK2AMD TURNS 100

And words of congratulations to Australian operator Howard Booth, VK2AMD who turned 100 years of age on March 6th. Originally licensed as G2AS of Sheffield England, Booth and his then young family emigrated to Australia

after the bad winters of the late 1940's, settling in Windang, NSW, some 60

miles south of Sydney. Booth, who was a builder and roofer in the U-K built his own house and still lives in it today. He is believed to be one of the oldest or even the oldest active radio amateur on the Australian continent and possibly world-wide. (WIA)

**

THE SOCIAL SCENE: QCWA AT STUART FLORIDA HAMFEST - MARCH 15

Ken Simpson, W8EK, says that the Quarter Century Wireless Association will

hold an open forum at the Stuart Florida Hamfest. The date of the event is

Saturday, March 15th at 11:30 a.m. Eastern Standard Time. The venue is meeting room 2 at the Martin County Fairgrounds in Stuart. More information about the hamfest is on line at www.mcaraweb.com (QCWA)

**

THE SOCIAL SCENE: CHARLESTON HAMFEST - MARCH 15

And the 24th annual Charleston West Virginia Hamfest also takes place on Saturday March 15th. Its venue is the Coonskin Armory at 1707 Coonskin Drive in Charleston. Talk in is on the W8CHF 145.35 MHz repeater. For more information please contact our own Jim Damron. His e-mail is N8TMW at

arrl dot net. (N8TMW)

**

THE SOCIAL SCENE: MICROHAMS DIGITAL SEMINAR - MARCH 22

The second annual MicroHAMS Digital Seminar is slated for Saturday, March 22nd on the Microsoft campus in Redmond, Washington. The program includes

a wide variety of topics centered around digital communications and Amateur

radio. Lunch and snacks are included with the price of the conference and

there will be free Internet access. Because of space limitations and parking requirements pre-registering is suggested, More is on line http://www.microhams.com/digitalconference (W7LRD, ANS)

HAM HONORS: 2008 YHOTY NOMINATIONS BEING SOUGHT

In case you have not heard the announcement at the end of the newscast the past few weeks, the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year Award. The award honors a licensee 18 years old or younger who has used ham radio to significantly contribute to the benefit of the Amateur Radio Service, to the state of the communications art, to the community or the nation.

Any FCC or Industry Canada licensed radio amateur, age 18 or younger, residing in the United States 50 states, plus Puerto Rico and the Canadian Provinces is eligible to be nominated for this award. To obtain a nominating form, send a self-addressed, stamped envelope to 2008 Young Ham of the Year Award, c/o Newsline, 28197 Robin Ave, Santa Clarita, California, 91350, or download the form from www dot yhoty dot org. Nominations may be electronically submitted at the website, but supporting materials must be submitted separately.

Presentation of the 2008 YHOTY Award will take place in August at the Huntsville Hamfest in Alabama. Again, more information is in cyberspace at our special website at www.yhoty.org. (ARNewsline(tm))

EMERGING TECHNOLOGY: GERMAN PUBLIC RADIO TO ABANDON EUREKA 147

A once prominent digital audio broadcasting format soon could be a technical achievement of the past in one European nation. This, as an oversight organization in Germany says its time to stop supporting Eureka 147. Jim Damron, N8TMW, has the details:

--

The organization responsible for setting fiscal policy for public broadcasting in Germany has deemed the Eureka-147 Digital Audio Broadcasting codec unworthy of further investment. The KEF which oversees the financial aspect of DAB is calling for the equivalent of about $246 million slated to fund public-service DAB projects from 2009 to 2012 to be reallocated to other projects.

Since 2001, some $266 million has been allocated to KEF for Digital Audio Broadcasting projects. In explaining its recommendation to halt such funding after 2008, KEF said that receiver options remained limited in

Germany and that public support for FM radio and the availability of satellite radio, Internet radio, podcasts and other outlets have changed the nature of radio broadcasting since DAB was first envisioned.

I'm Jim Damron, N8TMW.

--

But there is some strong opposition to such a phase out. A group called the Initiative Marketing Digital Radio is a European consortium of receiver manufacturers, transmitter network operators, program providers and institutions backing the DAB standard. It warns that Germany moving away from Eureka 147 could cause chaos. It says this is because the digitalization of broadcasting is unstoppable. (RW)

**

WORLDBEAT - UK: BBC CLOSES SHORTWAVE TO EUROPE

The British Broadcasting Company has announced that all its shortwave radio transmissions to Europe ceased on 18th February 2008. The U-K based broadcaster says that it recognize that this will be a loss to some of their listeners, its managers point out that BBC World Service radio programs are delivered to Europe via other platforms including longwave at night.

The BBC's World Service grew from the original British Empire Service which was inaugurated in 1932. Last year the BBC celebrated its 75th anniversary and today boasts an estimated world audience of some 180 million.

According to the announcement, only the analog shortwave transmissions to Europe are affected. The experimental Digital Radio Mondiale or D-R-M transmissions for North East continental Europe will continue unaffected. Full details of World Service sound broadcasts can be found on the web at bbc.co.uk/worldservice. (GB2RS)

OPERATING NEWS: INTERNATIONAL MUSEUMS WEEKEND ADDS ANOTHER WEEKEND

An update to last weeks story on the International Museums Weekend operating event slatted to place on 14th and 15th June. Due to popular demand, this event has now been extended to two weekends by adding June 21st and 22nd as well. Those intending to take part should register

their museum on the International Museums Weekend website. (GB2RS)

**

DX

In DX, NZ5N reports that he will be operating the satellites during the upcoming Swan Island Dxpedition as HQ8R from March 15th to the 23rd. Bill

will be taking along an FT-817 and an Arrow antenna to work the birds. Time permitting, he will also try to make a few contacts before and

after the expedition from the Honduran mainland. Weather permitting, he may

also try to give out grid square EK 76 from the boat on the way to and from

the island. QSL as directed by the operator.

The 2007 Equatorial Guinea 3C7Y DXpedition to has been approved for DXCC credit. If you had cards rejected for this operation, please send an e-mail to the ARRL's DXCC Desk to have your record updated.

Beginning on Sunday the 9th of March, a week-long expedition will operate from various castles and forts on the Isle of Man. Club calls GT4KPT, GT8LED and GT3GWB will used. They expect to activate several Worked All Britain areas during the week.

And G3RWF is active from Uganda as 5X1NH until March 22nd. His operation will be limited because he is on holiday but he expects to operate all of the High Frequency bands except 160 meters. Modes will be CW, SSB, RTTY and PSK. He will run 100 watts to wire antennas. QSL to G3RWF.

Last but by no mean least, F8CHM will be active as FR5EZ from Reunion Island until March 21st. He expects to be active on the High Frequency bands as well as 6 meters on CW and SSB. QSL to his callbook address.

(Above from various DX news sources)

THAT FINAL ITEM: LIGHTNING AND ICE FOR SALE

And finally this week, a company that hams and broadcasters have come to rely on for lightning protection devices is up for sale. Its up for sale on eBay. The company is Industrial Communication Engineers. Its located in Indianapolis, Indiana here in the U-S-A and that's where you will also

find Amateur Radio Newsline's Jack Parker, W8ISH:

--

Better up that limit on your Pay Pal account. This business opportunity could cost you a pretty penny. Long time amateur radio operator Mike Koss

W9SU is hanging up his test leads and putting his company on the eBay auction block. Going price is a cool 2-point-7 million dollars. Koss has

spent the past 18 years building up his electronic products business. So why auction the business on eBay?

SOT: "eBay is one way you can advertise anything including a
business. And there are
And it can be seen by the entire world. The total cost of the ad on eBay was 14-dollars".

This may be the first time an electronics manufacturer has been auctioned on eBay. For 2-point-seven-mil, Koss says you get a large product and parts inventory, circuit designs, established customer base, 800 number and

two new patents for electro-magnetic pulse and nuclear electro-pulse arrestors that have not yet been marketed.

So if lightning strikes and he gets an offer, what is this 40 year veteran

of amateur radio going to do now?
Koss: "Becoming somewhat of a semi-professional DXer has always been kind

of a keen interest. Ah, go back and sort of be a kid again",
Mike's world class ham radio station includes six tall towers that make great lightning rods.   Its all protected by his patented lightning protection equipment. It's that ham station that Koss would like to spend

more time operating. He says the stress of running a business and getting

gray hair lead to his decision to auction the business on eBay and enjoy retirement.

Koss: "I'll probably travel a little bit because I haven't done very
 much
of that in my lifetime and I'd like to write a book".

Koss says the book would detail the finite science of tower installation, lightning protection and proper grounding techniques. It could be a golden idea that earns him enough pocket change to enjoy the best of amateur radio and his well earned retirement.

Reporting from Indianapolis, this is Jack Parker W8ISH.

--

Amateur Radio operators world-wide depend on Industrial Communication Engineers lightning protection equipment to keep their stations safe from Mother Nature. Many hope that Mike Koss, W9SU, is successful in finding someone to keep it going for many years to come while permitting him a lot more time on the radio. (ARNewsline(tm), W9IND)

They surely do. About the time I first became licensed, I think there
were about 300k radio amateurs in the U.S. and only about 100k in the
entire rest of the world.

>>> Hallicrafters made the almost-all-solid-state

Right. The Drake firm stayed in the family and Swan stayed with the
original owner until he sold it to Cubic, circa 1980.

Nope. Around 1964, National introduced the solid state, synthesized
HRO-500. They were expensive problem children. There have been
numerous problems with the PLL circuitry. I bought one in 1997 and it
had (Surprise!) PLL problems. I sold it.

> About the only company besides Collins that was able to come into the

>
> Interesting! I always thought the reason they were left out was so
> that folks would buy the separates.

Not exactly. Drake figure that anyone who wanted to use CW *would* buy
the separates. They just didn't figure that there was a market for
transceivers among regular users of CW. The light finally dawned.
Of course that the meager CW features of the TR-4CW gave way to the
advanced features of the TR-5 and TR-7.

>> Amateur radio is much more market driven today.

Yep. The numbers look very, very good. These days though, the
difference between very good and very, very good is just a smidgen.

>>> By comparison, the TS-520S had all of that and more, even if the rx
>>> wasn't as good.
>> DXers and contesters weren't buying them though.

>
> 'Course not. But they weren't the target market, either. The SB-101/
> HW-101 crowd were.

Uh-huh. It marked the end game for Heath. The company just didn't
realize it right away.

> I remember that towards the end of its run the HW-101 price reached
> $449, which was almost double its introductory price less than a
> decade earlier. That was without power supply, speaker, mike or sharp
> filter. And you had to build it. FT-101/TS-520S took that market!

Right. Don't forget that the JA rigs not only had an inboard,
multi-voltage AC power supply; they included a DC supply for mobile use
as well. Neither of the two rigs mentioned actually came with a CW
filter. Those were optional accessories.

>> When Kenwood began

> of doing it, though.

I knew a guy who once had machinists make him a part for a Cadillac power seat instead of paying what he considered to be an outrageous price for the part from GM. I think he spent about four times what GM wanted.

> And consider: $125 for a reduction tuning knob for a receiver that
> went out of production more than 45 years ago?

But those receivers are apt to be around for another few decades and are highly prized. As I recall, there's still an outfit making highly stable digital remote VFOs for the Collins KWM-2 series.

> In the bad old days PC fabrication for homebrewing meant doing layout
> work, resist, etching, drilling, etc. I've done it and got good at it.
> But today you just download some freeware from a PC fabrication house,

That's been a good thing when the previous choice was to lobby FAR Circuits to make a board or resort to doing it yourself.

>>> There are folks still building HBRs today, from scratch.

>> I'd think that getting some of the parts could be really difficult.
>
> You'd be surprised what folks have squirreled away....

Nooooooo, I don't think I would. W9ZR asked in the boatanchors newsgroup if anyone had the bowl insulator from an ART-13. I sent him one.

> In reality the only unobtanium parts are the coil forms and IF cans.
> One trick is to use ARC-5 IFTs instead. But I prefer original

Those IF transformers are one of the things I was thinking about. I
have loads of large and miniature 455KC stuff, but nothing like the
higher frequency cans.

Those 1 KW or better, solid state amps are becoming more commonplace but
prices are high and the things are still delicate. My pal N8NN runs his
FT-1000MP with a Quadra for really easy band changes and computer control.

I'm looking at the Tokyo Hi Power 1.5 KW job, but it is expensive. If
the Starkville, Mississippi gang gets their act together, we may see an
affordable high power, solid state amp in the near future.

There's no one who can reduce a waste stream like West Africans. The seams in Coke cans are opened after the tops and bottoms are removed and the cans are rolled flat. The become roofing material or house siding. Black trash bags are washed and recycled. Pop bottles become water bottles and used 55-gallon drums (previous contents unknown) are used for making palm or cashew wine.

I think that'd be appropriate.

The upright case has a full metal cover, space for a cooling fan and a shelf which can hold the rectifier board and electrolytic caps. The bottles aren't U.S. types, they're Phillips equivalents with graphite plates. They should hold up for a long time. I'll use Chinese Coleman-type lantern chimneys.

Some of us would have to buy stuff in order to have scraps. I've found that the hobby shop stuff is not terribly expensive. They also have round, square and sheet plastic stock. Some is clear and some is translucent--ideal for making dial scales.

Heck, I wouldn't even know where to find an old lithographic plate these
days.  I have leftover aluminum flashing stock from, well--flashing.

I don't have a place with a cull cart.  I've sometimes bought
ugly-looking plywood and topped a desk with vinyl floor tile.  If you
want to fancy one up, hardwood veneer isn't too pricey.

I'm pretty sure the ones we did in 1973 are still in use in Cincinnati.
  I had a big Jensen folded horn cabinet in Tanzania.  It had a dual
voice coil 12" subwoofer in it.  That's still in Africa.

```

Not everyone lives like us, Jim. Some folks have houses large enough to be homes *and* museums and the wherewithal to populate the place with both types of antiques. I can appreciate antiques as art but we don't have enough room for antiques we can't put to use unless they happen to be art for the wall or items which can sit on a table for the most part.
>
>>> The term I would use is "classic" or "timeless". Look at some Mission or Shaker furniture - it does not appear "antique" or dated. That's what TSS is all about, applied to Amateur Radio (and a limited budget!)

> I rip 2x4s in half lengthwise; they're all you need for most shack furniture. Also do an offset cut that gives one piece 1-1/2" square and another that's 2x1-1/2" from a single 2x4. Table saw makes it easy.

You're a lightweight! My main operating position is representative of overkill. The frame is 2x4's; the legs are 4x4's and the top is a hollow core door. There's a two shelf console with two angled wings, with enough roof under the first shelf for solid-state brick VHF/UHF amps, keyers, paddles, DVK and the like.

Did I mention the six foot rack to my right?

> I did one table with a hollow core door many years ago (it was free) but they are too flimsy and too expensive for TSS approval now.

They hold up well with the 2x4 frame and 2x4 bracing.

> The shack table in the website picture was designed for Field Day use, 25 years ago. The top was the maximum size that would fit in the back of a VW Rabbit with the rear seat taken out. All the legs and braces are bolted on in such a way that the whole thing breaks down into one package. Does the job for now but a replacement is in the works.

Mine will break down too, but I don't think it'll fit in a Rabbit. :-)

> Maybe.
>
>> � There's no "Captain Nemo walking into his cabin on the Nautilus" look here, but the place is attractive and utilitarian.
>
> IMHO the true art of a hamshack is having things set up in such a way that you just want to sit down and start operating as soon as you see the place.

That's how it is here--unless I get sidetracked by the internet.

> away with most of the pendulum action. If you're worried about
> buildings shaking, even a steel mounted would have such vibrations
> transfered to the projector. The wires might have even damped those
> types of motion.

Using wires does not work. The reason is that buildings do not shake in the way most people think. The building may shake in one axis, and not another, and may shake in multiple directions, but not the same amount in all axes, or at the same time.

This will have the effect of pulling the entire assembly in one direction or another, depending on "whats a-shakin'", and which wire is pulling more at the moment.

However, on a good sturdy ceiling mount, that has a resonance frequency as high as practical, building movement is not much of a problem, unless the building is on the verge of shaking itself apart. The reason is that rapid pendulum damping with little movement gets rid of pendulum moment, and that most floors tend to shake closely with the ceiling on any given level, so the people are moving along with the image and screen.

I've never seen a professional design with wires, although I've seen a few designed by others, and they all have damping problems, all related to the multifilar pendulums they create. Oddly, the wire systems I've seen were "designed" and built by engineers who thought they could remove all the filar pendulum movement by going multifilar. That inherently creates more complexity in movement. The answer is in that the projector on the end of that pendulum becomes very similar to a mirror galvanometer, greatly amplifying the movement by the time the light hits the wall.

There is room in this world for a lot of different tastes. Some I like, some I do not. I am always careful to not call any of them ridiculous so that I don't indadvertantly insult someone. 8^)

I have a hard time agreeing that *that* Strat was defaced. I have a white on white Strat myself, and am happy to keep it that way, but there are a lot of places who do custom guitar work or design:

http://www.sparrowguitars.com/
http://www.terrapinguitars.com/
http://www.warmoth.com/

Even Fender:

http://www.fender.com/customshop/home/index.php

>>   There is actually some of this aesthetic running about in Amateur

I disagree, respectfully, more below.

<snippage>

> Some kind of plating or paint is needed and it isn't practical to
> paint things like the threads of screws. Key's aren't designed to
> look as if they're steam powered.

Precious metal plating is not there because it is practical, all those keys are quite embellished, and can we tell the difference between a gold plated and a painted one in operation? They also have unneeded shapes, and Mister Begali calls them art. I find them to be quite beautiful, and a magnificent tour de force in mechanical design in the prosaic function of a telegraph key, but would not try to argue that they are somehow based on practicality.

That's pretty much my input on the subject until I have the operating are designed and built. My shack may not be to everyone's tastes, but hopefully I'll like it! 8^)

Okay, so what you earlier described as the motor fan causing a pendulum
motion wasn't exactly correct then. What you've described could be
described as random orbital in nature or, at times, even multiple pendula.

> This will have the effect of pulling the entire assembly in one direction
> or another, depending on "whats a-shakin'", and which wire is pulling
> more at the moment.

I'm thinking that if you've got a building doing *that much shaking*, you've got more problems than a projector moving a bit.

> However, on a good sturdy ceiling mount, that has a resonance frequency

I'm getting dizzy already, Mike.

This is getting really close to becoming a Cecil moment. :-)

You must never be so sensitive about what people might think of your
opinion that you become afraid to express it. If you think that a
certain style is kitschy or silly, you're permitted to say so. So am I.

>> Kitsch is kitsch no matter who tosses the pillows with a flair.

Sure. Places which will do nearly anything for a buck abound. Some of the work is skillfully done, but still ends up looking tacky.

>>>   There is actually some of this aesthetic running about in Amateur

> a gold plated and a painted one in operation?

No, we can't. That doesn't stop the gold plated one from looking better to most of us. Gold doesn't oxidize the same as most other metals. It doesn't need to be polished often. Gold in contacts is used where low conact resistance is desired. In the old days, keys usually had appreciable current running through them. With low current, solid state circuits, a little oxidation on contacts can result in a keying circuit malfunctioning.

No keys which are currently produced are made to look as if they're steam powered.

> They also have unneeded
> shapes, and Mister Begali calls them art.

Some folks think an abstract painting done by a Chimpanzee is art. I don't agree with them. Begali keys are well made. They're attractive to some.

> I find them to be quite
> beautiful, and a magnificent tour de force in mechanical design in the
> prosaic function of a telegraph key, but would not try to argue that they
> are somehow based on practicality.

Keys got prosaic function? The Begalis, like all other keyer paddles are designed to do a certain job. They can be as attractive as one can make them, but if they cannot do the job reasonably well, they fail.

> That's pretty much my input on the subject until I have the operating are

> designed and built. My shack may not be to everyone's tastes, but
> hopefully I'll like it! 8^)

You're the only guy who needs approve.

Dave K8MN

An attempt to send a small, ham-radio equipped balloon across the Atlantic:

http://www.spiritofknoxville.com/

Balloon design by NG0X if I read the info right. Telemetry on 30 meters.

Which brings up a question:

What are the regulations for such a transmitter? Over the USA is one thing, FCC has rules for that, but above international waters and other countries it's a different game, particularly since there's no operator aboard. The website says the transmitter will be turned off over the UK.

Just wondering.

Heh heh. The record was already broken last year for a solo Atlantic crossing by a GPS-guided gas engine powered radio-control model (built by an amateur - not a professional - aircraft builder). Radio control for take off and climb out, then for landing in Ireland (? well, somewhere in the British Isles)
The engine ran throughout the flight!

Heavier-than-air, of course, just hadn't been done by a hobbyist R-C modeler before. Also, R-C has a license-free radio service both in North America and most of Europe. No 'customs' in the usual sense and everything was arranged beforehand at the landing site. Model Airplane News (MAN) had the story. Now THAT took some doing by the builder (a record-setter over land) and several fellow model aircraft hobbyists.

73, Len AF6AY

It's considered an unmanned aircraft and subject to those rules.  If
it's registered in some country, it's subject to that country's rules
even if in international airspace.  If it's not registered anywhere,
it's fair game to be shot down as target practice by Air Defence
aircraft.

Thanks, Phil. Very interesting.

Do you have any idea why they're going to the trouble to turn off the transmitter over the UK?

I'm not sure of the exact year you were licensed but if it was in the
1960s the number of US hams was about 250K not 300K. As for the rest
of the world, 100K back then was pretty accurate *except* for Japan's
4th class licenses.

I used to wonder why most older equipment tuned so fast. One reason
was cost; a simple string or pinch drive cost a lot less than gears.
But even expensive stuff like the HROs had fast tuning by Southgate
standards.

I think the way hams operated in the past was a big reason. Split
operation was pretty standard even before crystal control was common
in ham rigs, so if you called CQ, an answer might be anywhere in the
band.

> Around 1964, National introduced the solid state, synthesized

Even with a working PLL, the '500 had bad intermod and dynamic range
problems for such an expensive rx.

Kachina had an entirely new concept: the computer-controlled rig
without a front panel. That still hasn't really caught on.

Not just bells and whistles but basic things like RIT, sharp filters,
decent dial drives and the ability to turn off the AGC.
Built in or as options, not as mods.

> > Varactor in the PTO?
>
> Yep, with a relay switching scheme.

The Southgate Type 6 and Type 7 achieve RIT without a varactor diode.
In fact, there are no solid state devices at all in either rig except
for two 1N34As in the SWR bridge of the Transmatch.

Point is, you can get a very very good rig, American made, with direct connection to the makers of the rig, for less than a lot of mid-range rigs from Japan.

> > 'Course not. But they weren't the target market, either. The SB-101/
> > HW-101 crowd were.
>
> Uh-huh. � It marked the end game for Heath. � The company just didn't
> realize it right away.

Part of what changed too was the economy of kitbuilding. In the days of point-to-point wiring, a lot of the cost of manufactured electronics was the assembly labor. Kits eliminated that, but added the cost of the assembly manual and the inevitable problems of supporting the kitbuilders. Automated and semiautomated PCB-based manufacturing drastically reduced the assembly-labor cost.

Another factor was alignment cost. Heath had to design their rigs so they could be aligned with minimal test gear. That's one reason for the preassembled LMO in the SB line and the preadjusted, sealed BPFs in them. That limit on design flexibility doesn't exist for a manufacturer who can spread the cost of test equipment over many units.

> as well.

Sort of. The TS-520S required the optional bolt-on DC-5 DC supply adapter for DC operation of the transmitter section. It consisted mostly of power transistors and a heat sink. It would not operate the '520 at full power; you were limited to about half power. In the TS-520SE, the last version, the DC option was eliminated and the rig became AC-mains only.

>� Neither of the two rigs mentioned actually came with a CW

Yup - but not an expensive one.

The K3 has put the Elecraft amps on the back burner for a while. I
suspect that will change once the slack runs in.

: My WAG is because it doesn't conform to their rules.

What will the transmitting frequency be..? Don't forget that we have different frequencies in some bands, for example we only get 2 MHz in the 2m band, 144-146 MHz whereas the US has 144-148 MHz.

If it will be transmitting outside of the UK bandplan then that would be a valid reason as the frequency used could be in use for something else over here.

Amateur Radio Newsline(tm) Report 1596 - March 14, 2008

Amateur Radio Newsline report number 1596 with a release date of Friday, March 14th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T.   The U-S championship Amateur Radio Direction Finding games are set for May in Texas, a former Novice is fined $4300 and a look back at ham radio taking to space on a commercial communications satellite. All this and more on Amateur Radio Newsline(tm) report number 1596 coming your way right now.

(Billboard Cart Here)

**

RADIOSPORTS: THE USA ARDF CHAMPIONSHIP IN TEXAS IN MAY

Hidden transmitter hunters from across the nation are making plans to visit Texas in May. This, with hopes of going to Korea in the Fall. And its all in the name of radiosports. Newsline's Joe Moell K0OV tells us why. K0OV report:

--

Registration is now open for the biggest annual on-foot transmitter hunting event in the Western Hemisphere. The Eighth USA ARDF Championships take place Thursday, May 8 through Saturday, May 10 at Bastrop State Park near

Austin, Texas. The best radio-orienteers in the USA will be there, but the

courses will also be open to anyone, from any nation, at any radio foxhunting skill level. There will be practice sessions, a big two-meter hunt and another hunt on 80 meters, following standard international rules.

Excellent maps by the Houston Orienteering Club will be given to competitors before they set out on the course. Deer, raccoon and armadillo

make their home among the tall pines in this park, as well as over 250 bird

species.

National ARDF Championships are for individuals only. No teaming or assistance on the course is permitted. If you're a senior, don't worry about trying to compete against teenagers. Equal medals will be awarded in

five separate
age categories for OM's from under 18 to over 60. There are four similar age categories for the YLs.

Anyone with reasonable physical abilities can participate. You must be able

to run or walk through the forest and carry your DF gear for five to ten kilometers. You might win a medal, and maybe even a spot on Team USA, which

will be traveling to South Korea for the World championships in September.

We can only send a maximum of three people in each age category to Korea, so our national championships determine who gets the invitations.

For everything you need to know about the USA Championships, including schedules and registration forms, point your Web browser to the official site, _www.TexasARDF.org_ (http://www.TexasARDF.org) . That's TexasARDF.org. For a jump-start into the sport of ARDF, with equipment ideas and news of the World
Championships in Korea, go to _www.homingin.com_ (http://www.homingin.com)

, that's homingin.com.

From southern California, this Joe Moell, K0OV, for Amateur Radio Newsline.

--

As far back as the earliest days of Amateur Radio, direction finding has been a part of the hobby. And one can only wonder what the earliest T-hunters would say if they were here now to see the way in which their favorite past time has matured into an international radiosport. (K0OV)

**

RADIO LAW: GRAND TERRACE CA AGREES TO REDRAFT PROPOSED ANTENNA ORDENANCE

You cant call this a win yet, but it could wind up being one in the near future. This as the city of Grand Terrace, California, agrees to re-draft

a controversial proposed antenna ordinance that hams Say could take them off the air.

According to an e-mail bulletin to all ARRL members in the Southwestern Division, Grand Terrace, which is located in San Bernardino County, held a

hearing regarding proposed antenna restrictions on Tuesday evening, March 11th. In response to a letter from Volunteer Counsel, Len Shafer, WA6QHD,

the city did make a few technical changes to the wording of the proposed ordinance. Unfortunately, most of the undesirable proposed limitations remained as originally written.

A dozen or so local hams including ARRL Southwestern Division Vice Director

Marty Woll, N6VI, and Orange Section Manager Carl Gardenias, WU6D, attended

the hearing. The amateurs explained the adverse impact of the proposed limitations, the likelihood of frequent and contentious appeals, and possible litigation, the city council.

After hearing the testimony the council members unanimously agreed to a suggestion from Woll that the ordinance be redrafted by a working group that will now include ham radio operators on the panel. No timetable fore

the work to be completed was announced. (SW Division News Release)

**

HAM NUMBERS: GERMANY SAYS ITS HAM RADIO COMMUNITY GROWING

Some good news from overseas. Ham radio continues to grow in Germany.

That nations national society the Deutscher Amateur Radio Club or DARC, says that recent figures show that the overall number of amateur radio callsigns rose from 80,496 in 2006 to 80,927 in 2007.

But the news was not as good for the Deutscher Amateur Radio Club itself. It says that within the same period of time its membership fell from 45,308 to 44,246.

All in all, 75,262 personal amateur radio calls were registered in Germany

throughout 2007. (Deutscher Amateur Radio Club)

**

RESCUE RADIO: D-STAR TO SHINE AT GAREC 08

D-Star will be a prominent player at the upcoming Global Amateur Radio

Emergency Communications Conference, Also known by the acronym GAREC 0h 8, the event will take place June 26, and 27 in Friedrichshafen, Germany. This, in conjunction with German national HamRadio convention and exposition.

GAREC-08 will focus on the co-operation among I-A-R-U member societies and with specialized groups working on emergency communications in the Amateur Radio Service. Among the items on the program is a session titled 'D-Star an Advanced Technology in Emergency Communications. The preliminary program for conference can be seen at www.iaru.org/emergency/GAREC2008Program.pdf (Southgate)

**

RESCUE RADIO: CT DRILL BECOMES REAL LIFE DRAMA

Ham radio was part of a recent American Red Cross exercise held by the Mid-Fairfield County Chapter in Connecticut that became a real life emergency operation. The original purpose of the planned operation was to familiarize non ham members of the local Disaster Action Team members with the territory serviced by the chapter. Also to gain experience in the use of GPS to navigate to a destination; learn about the use of radio during a deployment; and compare the operation of VHF/UHF amateur radio gear and Red Cross 47.420 MHz radios.

The plan was to deploy five Red Cross vehicles to different destinations within the ten served communities covering over 200 square miles. Each vehicle would have a ham operator carrying a handheld VHF/UHF radio. Four of the vehicles would have a permanently installed Red Cross 47.420 MHz radio. In order to gain experience, only non-hams were to operate the Red Cross radios. A base station would be situated at the Bridgeport chapter house. The Greater Bridgeport ARC supported the Red Cross with nine fully qualified and trained Red Cross volunteers.

Just minutes prior to the scheduled start a real incident occurred and the volunteers responded. It was a fire emergency o the Red Cross Disaster Action Teams were activated. During the emergency radio amateurs were the communications link for the Red Cross which provided canteen supplies, office supplies and water.

Radio contact using the 47.420 MHz frequency was not possible once the vehicles were on scene at the incident site. Amateur radio performed flawlessly using repeaters in Bridgeport and Fairfield. The variety of available repeater locations and their antenna height provided the capability to virtually eliminate communications problems due to terrain or

structural interference. (WE1M)

WITH NEWSLINE: LATEST WEB SUPER SUPPORTER ABNNOUNCED

We at Amateur Radio Newsline are happy to announce our latest web super supporter. Our support fund Administrator Andy Jaremea, N6TCQ, has words as to whom it is:

--

The month of February 2008 saw another of our promotions for our web Super

Supporters. This time for an MFJ 2 meter FM monitor receiver to be awarded

to the individual or club donating the most to Amateur Radio Newsline during February.

A longtime supporter of Newsline is the Reading Amateur Radio Club in Pennsylvania, W3BN, and we are pleased to be sending their promotional award out to them in the next week or so. One of the things this club has

the right to be proud of is that their original ARRL charter was signed by

none other than Hirim Percy Maxim.

If you did not receive this support information you need to get on the Newsline Yahoogroups distribution list. Just go to Yahoogroups.com and sign up there. Information on donations I on our website.

I'm Andy Jarema, N6TCQ.

--

Our thanks to all of you who support the Amateur Radio Newsline. Its you who make these weekly newscast possible. (ARNewsline(tm))

ENFORCEMENT: ANOTHER HAM WARNED TO STAY OFF CERTAIN REPEATERS

A Maine radio amateur has been warned by the FCC to stay off certain repeaters or face enforcement action against her license. Receiving the Warning Notice from the FCC's Spectrum Enforcement Division is Amanda Spenlinhauer, KB1CQX, of the town of Wells. In it the FCC states that she must refrain from using any repeater where the trustee says to stay off. The FCC also told to Spenlinhauer that her Amateur Radio license expires in June. It advises her that it will not be routinely renewed unless this matter is resolved. (FCC)

**

ENFORCEMENT: FCC FINES FORMER NOVICE $4300

The FCC has levied a fine against a former ham who operated after his ticket had expired. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--

On March 6, the FCC announced that it has issued a Forfeiture Order in the amount of $4300 to Ronald Mondgock, the ex-KA3OMZ, of Honeybrook, Pennsylvania, for operating radio transmitting equipment on the frequencies of 439.850 MHz and 147.560 MHz without an FCC issued license to do so.

While he was licensed, Mondgock, held only a Novice class ticket. He was issued his first Advisory Notice in February 2001 after he had been heard operating on the 75 meter band. He was told that he was not authorized to use that portion of the spectrum and instructed to review the Commission's rules relating to Amateur Radio Service frequencies.

In July 2004, Mondgock, received a Citation from the FCC's Philadelphia Field Office dealing with several alleged infractions including operating on a frequency not authorized for Novice Class license holders. He did not reply as directed by the FCC and was issued a Warning Notice in November 2004. He was also told that his license that was scheduled to expire on December 14, 2005 would not be renewed until the matter is resolved.

In February 2006, the Commission sent Mondgock another letter telling him that his application for renewal of his Amateur Radio license could not be routinely granted and has been referred to the Enforcement Bureau for review. This, because he had never submitted responses to the Commission's correspondence and never claimed a letter sent via certified mail.

Mondgock was given 20 days to respond. He was also warned that if he chose not to do so that his application for renewal would be dismissed and a Notice of Apparent Liability for Monetary Forfeiture will be issued against him.

Apparently Mondgock chose to let his license lapse but he did not go away. It fell into the two year grace period where a ham can renew without taking a test but cannot legally operate. So it was in December 2006, the FCC's Field Office in Philadelphia sent Mondgock another Letter of Inquiry. This time to as part of its investigation of allegations of Mondgock operating his Amateur Radio Service station on the frequencies 147.560 MHz and 439.850 MHz. Again no response so on August 15, 2007, the Commission's Philadelphia Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 for unlicensed operation to Mondgock.

This time Mondgock did write back. In his response he did not deny the FCC's findings. Instead he asked for a cancellation of the proposed fine based on his inability to pay. He also supplied the financial documentation that the FCC said that it required.

After examining Mondgock's financial records the Commission declined to cancel the forfeiture. It did however recognize the financial hardship that a $10,000 fine would cause and reduced the amount to $4300.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Mondgock was given the usual 30 days to pay or to file a further appeal. (FCC)

**

ENFORCEMENT: UNLICENSED BROADCASTING BRINGS $10000 FINE

The FCC has affirmed a $10,000 monetary forfeiture or fine issued to Pennsylvania resident Michael Stone Campbell. This, for allegedly operating an unlicensed radio transmitter on the frequency 97.7 MHz in the Philadelphia area.

Back on October 2, 2007, the Commission's Philadelphia Field Office issued the Notice of Apparent Liability to Campbell. Although Campbell never filed a response he did submit a letter to Senator Arlen Specter, which was forwarded to the Commission on December 26, 2007. In his letter to Senator Specter, Campbell claims that the FCC lost his construction permit application, but he never has provided any evidence that he submitted such an application to begin with. Moreover, even if Campbell had provided such evidence, the mere filing of an application would not have provided Campbell any authority to operate a radio station.

Based on the information before it the Commission has now affirmed the $10,000 forfeiture. Campbell was given the usual 30 days to pay up or to file a further appeal. (FCC)

**

ENFORCEMENT: TWINS ARRESTED IN CA COPPER THEFT

A first break in the cases of the ongoing copper thefts that have been plaguing telecommunications providers ion the South-West. This with word that twin brothers and a juvenile have been arrested in connection with a series of thefts of copper wire in California. Jim Damron, N8TMW, has more:

--

An under cover investigation by the city of Lancaster's Sheriff's Station began after a report was filed by Verizon that $40,000 worth of copper wire had been stolen. The investigation in a sparsely populated area lasted nearly 50 hours. Three suspects were taken into custody who were linked to four thefts of copper from Verizon over two weeks.

The suspects reportedly climbed utility poles to cut the wire down and it was taken to recycling facilities where it was sold for between $1.80 and $2.50 a pound. Authorities a believe that the three suspects may be linked to at least a dozen similar thefts cross the region.

For the Amateur Radio Newsline, I'm Jim Damron, N8TMW, reporting.

--

With the price of copper soaring due to demand in overseas markets the theft of wire especially the south-west has become a major issue here in the United StatesIts also one of the reasons you are paying o much for coax and rotor cable these days. (Published reports)

**

HAM RADIO ON THE WEB: THREE NEW HAM RADIO ONLY WEBSITES

Several of what can best be described as ham radio clones of existing Internet services have sprung up in recent weeks. First up www dot cqoogle dot com which calls itself a ham radio specific search engine. Its really sharp at pulling up and grouping ham radio only information and is far better than its general purpose namesake. This one is a winner from the get-go.

Also now on-line is a ham radio dedicated video sharing site calling itself www dot cqtube dot com. Its kind of like a youtube where hams can hare videos but that in itself may be why it has only a handful of videos uploaded to it so far. It appear as if most hams who go to the trouble of producing a video are targeting those outside of the hobby and that's where the more general purpose youtube dot com truly excels.

Both cqoogle and cqtube are registered to Justin Johnson, G0KSC in Essex, in the United Kingdom who also operates the eBay-like www dot hambid dot com. Johnson described as the Managing Director of Telco Consultants Limited. That company has already seen success with online business in the such as its A1isp operation and now seems to be extending it's business plan into Amateur Radio. (ARNewsline(tm))

**

THE SOCIAL SCENE: RADIO CLUB OF AMERICA TEXAS EVENT 2008

The Second Annual Radio Club of America Texas Event will be held Tuesday, April 29, 2008 in Galveston at the San Luis Resort & Convention Center. This, in conjunction with the Texas APCO State Conference.

Craig M. Jorgensen will be the keynote speaker for this year's Texas Event.

Jorgensen is project director and co-chair of APCO Project 2534, chair of the Project MESA Steering Committee, and a member of the boards of directors of the Radio Club of America and the Public Safety Spectrum Trust. Long associated with standards-development for digital radio communications, Jorgensen is a past president of the Associated Public-Safety Communications Officials International and of the National Association of State Telecommunications Directors.

For more information contact The Radio Club of America, c/o Carroll Hollingsworth, PO Box 5680, Lago Vista, Texas 78645 or by e-mail to dhlago at aol dot com

**

THE SOCIAL SCENE: EASTERN VHF - UHF CONFERENCE IN CT

And the 34th Annual Eastern VHF-UHF Conference will be held on April 18th to the 20th at the Crowne Plaza Hotel in Enfield, Connecticut. In addition to speakers the gathering will feature an indoor auction to help defray costs of future conferences. An outdoor Flea Market is planned for Sunday April 20th, weather permitting. More information and a registration

form is on line at www.newsvhf.com. (Eastern VHF-UHF Conference)

CHANGING OF THE GUARD: HARVEY HETLAND N6MM KILLED IN HIT AND RUN ACCIDENT

Longtime Pasadena City College professor Harvey Hetland, N6MM, was killed Wednesday, March 5th in what authorities are calling a hit-and-run

cycling accident in a Los Angeles suburb.

According to a reports in the Star News newspaper and the Westside Bikeside

newsletter, Hetland and a companion cycleist were on their way home after riding up to the town of Montrose. They were descending La Tuna Canyon Road in near-by Sunland where N6MM was passed on his right by an automobile. Hetland swerved the bike into the center of the road and fell

over, got up for a moment, and then collapsed. An exact cause of death has

yet to be determined.

First licensed in 1960, and an Extra class license holder since 1964, Hetland was a member of the DXCC Honor Roll and was certified as a 35 word

per minute Morse operator. He had retired from Pasadena City College in 2007 where had spent 32 years teaching various courses including electronics and applied algebra.

Authorities are still looking for the car and its driver involved in the accident. Funeral services for Harvey Hetland, N6MM, were scheduled for Thursday, March 13, at the Westminster Presbyterian Church in Pasadena, California. He was age 65. (Star News, Westside Bikeside, K0OV)

**

EMERGING TECHNOLOGY: VISUALLY HANDICAPPED EMMCOMS SYSTEM DEVELOPED

Turning to the new technology page, researchers at Georgia Tech's Wireless Rehabilitation Engineering Research Center say that they have received good news. This, regarding initial testing of their newly developed Wireless Emergency Communications or W-E-C project for the visually handicapped. Results indicate that 94 percent of blind and visually impaired test subjects found W-E-C to be a significant improvement over their current methods of receiving emergency alerts.

This first field test involved participants from the Georgia Radio Reading Service in a full-day study to engage the effectiveness and accessibility of this prototype emergency alerting system. Subjects ranged from sight-enhanced individuals to those who are fully blind. Additionally, the test subjects' level of familiarity and use of wireless technologies ranged from technically savvy to infrequent users.

WEC tested custom software that runs on a Windows Mobile OS, designed to send accessible emergency alerts to short message service capable handsets. The custom software then presented the content of the text alert in an audio format. During the test engineers simulated the emergency alerts, employing the Common Alerting Protocol, as if they originated from the National Weather Service. The mobile phones used had the capability to recognize an incoming alert of critical importance and override any muted sound or vibration settings to ensure that the critical alarm was delivered.

Some 18 percent of Americans are thought to have some type of disability, and that an estimated 60 percent of Americans use wireless services. The advantage of accessible emergency communications software and devices like this is that they can reach the user, no matter what their activity or location, with lifesaving information. Once fully functional, it could also assist blind hams involved in Emergency Communications work as well. (KC9RP)

**

EMERGING TECHNOLOGY: W1YU D-STAR REPEATER OPS PAGE

Some names in the news. First is Tim Mik, WY1U, in Connecticut, who has created a web page that enables anyone to view activity on a particular

D-STAR repeater. All you need to do is select a geographic area, select a repeater and go click to see whose on the air and who recently has been. The page is for now centered on U-S operations. As such it only includes a few of the D-Star repeaters that are available in the other parts of the world. You can view this new service to D-Star users and those interested in this emerging mode at http://home.comcast.net/~timmik/dstarsearch.html (Southgate)

**

NAMES IN THE NEWS: NEIL PATEL NOMINATED TO HEAD NTIA

The White House has nominated Neil Patel to head the National Telecommunications and Information Administration, better known as the NTIA.

Patel has been assistant secretary for domestic and economic policy to Vice President Cheney. Before that, he was staff secretary to the vice president and is former general counsel at UUNET Technologies.

The NTIA is the President's principal adviser on telecommunications and information policy.. Meredith Atwell Baker has been heading the program as acting NTIA chief. she is leaving the agency, but has not publicly given a timetable for her departure. Patel must be confirmed by the Senate. (RW)

**

HAM RADIO IN SPACE: ARISS TRAINING PLANNED FOR THREE NEW ASTRO-HAMS

Amateur Radio on the International Space Station training sessions are being planned for astronauts Nicole Stott, KE5GJN, Sandy Magnus, KE5FYE, and Bob Thirsk, VA3CSA. Magnus is expected to be a crewmember of Expedition 17 and 18, flying to the ISS on STS-126 in September.   Stott, a member of the Expedition 19 crew, will fly on STS-128 in May 2009. Thirsk, a CSA astronaut, will follow the same month on a Soyuz flight.   (ANS)

**

WORELDBEAT - NEW ZEALAND: NZART CLOSES MEMBERSHIP E-MAIL REFLECTORS TO AVOID LITIGATION

The national society of New Zealand, the NZART has announced the closure of its Internet reflectors.. This means that all remailers formerly open to members are being permanently shit down.

The reason given in the Match 5th notice indicates that the action came about to keep the NZART from becoming embroiled in some future litigation. This, in case someone posted something another ham did not like and the matter went to court.

The only NZART e-mail reflectors that will continue to operate are those for internal use not open to the general membership. These include the Council only, HQ plus Council only, the Officers only and the ARE-C reflectors. All the other NZART sponsored reflectors closed indefinitely effective at 9 p.m. New Zealand time on Friday 7 March 2008. Only more proof that we live in a truly litigious world. (NZART)

**

DX

In D-X word that F5LGE, is active portable FM from Martinique until March 30th. Listen out for him on 160 and 80 meters on CW. Operation seem to take place between 2330 to 0730 UTC. QSL via F5LGE, by the Bureau or direct. to Courgibet Rene, 13 Ruelle Crepion, 51240 ST Germain la Ville, France.

Also, BU2AI, is again active portable 9 from Matsu Island until March 20th. He operates as a mobile station from 1000 to 2300 UTC on low band CW and SSB. QSL to his home callsign, direct or by the bureau.

W6ALC will be in China for three weeks starting on March 17th. Red says that he has permission to operate from the contest station B7P. He also plans to visit the new club station BY7OK in Foshan. QSL as he directs you on the air.

And WA2YUN is currently on a work assignment on Wake Island operating portable KH9 as time permits. QSL this operation via K2PF.

Above from various DX news sources

**

THAT FINAL ITEM: AUSAT - THE HAM RADIO SATELLITE LINK

And finally this week, the story of ham radio taking to space on a commercial communications satellite. It happened a few years ago down-under. WIA- Newsman Jim Linton, VK3PC, takes on a trip back in time:

--

Recent news that AMSAT-North America had struck a deal with IntelSat to put an amateur satellite in geosynchronous orbit has rekindled memories of when VK and ZL radio amateurs had such a satellite.

In the early 1990s Australia's satellite company Aussat opened access to a spare transponder on one of its three its geostationary satellites, primarily for use during the Jamboree on The Air.

The Aussat link was normally established a week prior to JOTA for testing and for the general amateur community to use.

It was accessible through various amateur repeaters across Australia and the national UHF linked repeater system in New Zealand. There was also the capability to transmit to all points the annual JOTA opening broadcast.

The Westlakes Amateur Radio Club VK2ATZ north of Sydney also used Aussat for amateur television transmission.

The transmission was downlinked by Peter Cossins VK3BFG who rebroadcast it across Melbourne via the ATV repeater VK3RTV.

A proposed system called AMLINK, or Amateur Link, was conceived which sought to permanently link a network of 70cm repeaters in Australian capital cities through Aussat.

Approval was granted, a prototype interface unit developed and tested, then news came through that a replacement Aussat satellite had suffered a launch failure.

Changing government telecommunications policy ultimately rescinded approval for the AMLINK project, and sadly the geostationary satellite era for radio hams down under came to an end.

I'm Jim Linton VK3PC and you're listening to the Amateur Radio Newsline.

--

Thanks Jim. (WIA News, VK3PC)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,
Arcadia, California 91066.

Before we go we want to remind you that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year is now open. Any licensed radio amateur age 18 or younger residing in the United States or Canada is eligible for the award. Full details and both downloadable and on-line nominating forms are in cyberspace at www dot YHOTY dot org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Davis, W2JKD, saying 73 and we thank you for listening.

A balloon is an aircraft so that makes it illegal to transmit.
No transmitting equipment may be operated from an aircraft other than
type approved aviation band equipment under the control of the commander.

Can you cite any sources that back up this statement?

Weather balloons are launched on a daily basis, using radio to send their data. I don't think that these are illegal.

I believe that "pilot in command" is the term you want instead of "commander", and it's my understanding that any equipment that the PIC approves can be used from the aircraft. I've heard a fair number of hams signing "aeronautical mobile" and I'm sure that private pilots routinely use cell phones. Another example is the telephone service provided on many commercial airliners.

So does that make the whole project is illegal..?

What about amateur radio equipment (which is what we're talking about, isn't it)..?

It's illegal here in the UK to operate aeronautical mobile but I understand that in the US and other countries it's allowed with the permission of the PIC (pilot in command).

But this is an unmanned craft, so where do we stand with that..?

I'm not sure where you are getting your info. Lots of hams are sending
up balloons with transmitters all the time. Lots of links can be
googled, but here are two:

http://www.athensarc.org/balloon.asp
http://www.arbonet.net/

At least in the US, the rules are conducive to ballooning for schools,
amateurs and weather forecasters. I'd been planning to do some Amateur
ballooning for several years, but other duties have interfered.

One of the most difficult aspects of trying to get a group started was
the disbelief of many people that we were actually allowed to do this
sort of thing.

There are rules, and they must be followed, but they are commonsense and
not terribly restrictive.

Some of the other replies are apparently forgetting we're talking about it being illegal **while the balloon is flying over the UK**.

It is indeed legal **under U.S. regulations** to operate aeronautical mobile. But U.S. regulations cease to apply once the balloon enters the airspace of some other country. It would appear British regulations do not allow for aeronautical mobile operation in unmanned aircraft.

It will be in an Air Navigation Order or an Avaition Act somewhere.

> Weather balloons are launched on a daily basis, using radio to send their data. I don't think that these are illegal.

Radiosondes are a special case, using very low power on an assigned frequency.

> I believe that "pilot in command" is the term you want instead of "commander", and it's my understanding that any equipment that the PIC approves can be used from the aircraft. I've heard a fair number of hams signing "aeronautical mobile" and I'm sure that private pilots routinely use cell phones. Another example is the telephone service provided on many commercial airliners.

The Commander of an aircraft is not necessarily the pilot in command. The commander, who is a qualified pilot but does not necessarily fly the aircraft, is responsible throughout the flight in the same way as the captain of a ship. Many long haul flights depart with 2 crews, one sleeping. It is not unusual for the person sitting in the left hand seat (and thus pilot in command) to change 3 or more times in the course of the flight but there is only one commander.
Do you expect the two pilots sitting up front to remain awake and competant for a 16 hour flight ?.

That may be the case in the USA but it is certainly illegal in the UK and in the European Union. There are a few type-approved satellite based telephone systems which ICAO have agreed may be fitted in passenger aircraft, all of which are permanent fixtures. These remain switched off until the aircraft reaches cruising altitude and are switched off again at top of descent to minimise the risk to navigation systems.

An aircraft is ruled by the law of its country of registration but operation is ruled by the authority in whose airspace the aircraft is currently located. It may thus be legal to fit a transmitter in the USA to a USA registered aircraft but it must be switched off before entering european airspace.

But these are still region-specific. Here in Region 1 we are most definitely *not* allowed to use amateur equipment on board aircraft, even a light aircraft of which the operator might be the sole occupant and therefore his own PIC.

Likewise cellular phones. Although the technical specifications of the systems in use, certainly GSM as used over here, means that once in the air the handset would be unlikely to see many base stations as the transmitting antennas of these would be aimed downwards at ground-based users.

The phone service provided commercially on airliners is satellite based and is specifically licensed for the purpose. Some airlines are (unfortunately IMHO) experimenting with pico-cells inside the cabin to allow passengers to use their own handsets, but the onward transmission from the aircraft is by satellite.

It may be in the the UK, but here in the USA, some of the In Plane Phone Communications, is done in the 800 Mhz band from Ground Stations. Our Regulatory Agency, (FCC) setup a Radio Service just for Air Ground Phone Communications. I can't remember the Actual Name offhand, but I am sure that Phil can come up with it.

Rumaging through a box of QSLs accumulated over the last 40 years, I see that I have confirmations for about 200 countries, so maybe it's finally time to apply for DXCC :-)

I understand how deleted countries work, but what about Somalia? If memory serves, that country, or parts of it with similar names, has come into and gone out of existence several times since I got a 6O1ND card back in 1963.

Is it just a wash, because a country of that name, in more or less the same place is now on the DXCC list?

Has anyone tried out CW Skimmer?

This looks like a product that could really change the way contesting and DX is done.

http://www.dxatlas.com/CwSkimmer/

This software can be used with a wideband SDR radio such as one of the "SoftRock kits to read a band. It can also be used with your own radio if you care to do a little surgery.

It will "read" the CW signals on a band, and sift through them to find the call signs, and display the same.

It probably will not appeal at all to the purists out there, but at least for myself, I find it an intriguing bit of software.

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup for amateur radio operators and other people having an interest in the Amateur Radio Service, as defined by national regulations and international treaties. Following are the posting guidelines for this newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
    2.1 Netiquette guidelines
    2.2 Posting form requirements
    2.3 Guidelines on signature (.sig) files
    2.4 Guidelines on excessive quoting
    2.5 Guidelines on pointers to outside sources
    2.6 Guidelines regarding questioning someone's suitability to hold an amateur radio license
    2.7 Guidelines regarding name-calling
    2.8 Guidelines regarding civility
    2.9 Other unacceptable topics

---

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur radio operators and other people having an interest in the Amateur Radio Service. Participants are invited to engage in open discussion of amateur radio issues and exchange information about participating in the hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions and discussions about amateur radio licensing, regulations, tips on various aspects of setting up an amateur radio station, and sharing operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade posts, posts that are off-topic to the Amateur Radio Service, posts promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/

announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:

Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/about/whatis/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

```
Posts that attempt to publicly criticize moderators or moderation         |
decisions in the newsgroup itself are also not permitted, as stated in    |
our original newsgroup charter.  Please direct any such critical          |
feedback to our administrative contact address at the bottom of this      |
article, where it will be carefully considered by an appeals team of      |
moderators.  This team is distinct from the initial team of moderators    |
that approves or disapproves article submissions, and thus can provide    |
independent oversight of moderation decisions.                            |

Similarly, if you see an obviously inappropriate article in our           |
newsgroup, please assume that it was a mistake or a direct forgery.  The  |
moderation team makes every effort to protect the newsgroup from such     |
incidents, but they do happen, albeit rarely.  You may also submit        |
feedback to the same address regarding such articles in our newsgroup,    |
but it is likely that our monitoring software and procedures have         |
already detected it, and we are actively handling the problem.  Please    |
resist "piling on" with followups to the newsgroup when these incidents   |
occur, so that we don't have to reject such articles.                     |
```

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

Michael Coslo wrote:

> Has anyone tried out CW Skimmer?

I have to admit that I checked the calendar to be sure it wasn't April after reading about this.

I did a little searching on the web and found the same sales pitch repeated several times. I did find an article by Pete Smith N4ZR at http://www.pvrc.org/~n4zr/Articles/Skimmer.pdf that had some real-world data.

My question, based on limited experience with the ability of computers to copy CW in less-than-ideal conditions, is how many of the signals on a crowded contest band it would actually be able to successfully decode. Maybe this technology has made great leaps forward since I last tried to use it, but I just can't see it being effective enough to dig the signals out of the QRM and parse out the callsign.

I didn't find any actual use in a contest, so such real-world experience would be most interesting.

Hi Steve,

I've been experimenting with some of the CW reading and sending software. due to my hearing issues. Background is that I have profound tinnitus, don't hear much of anything over 2KHz, and weirdly enough, my brain processes all sounds with equal weight. Noise is given equal importance to what I actually want to listen to. So I can work CW if condx are perfect, but most of the time I don't do very well.

Enough of my whining...

There is a new engine out there, of which I think Skimmer is using. I have another program called MRP (something)that looks very similar. It works very well indeed. It has that visual dot/dash display on a horizontal waterfall, (also a big help) and the interesting thing is that it seems to be doing something where it "looks behind" and will sometimes correct itself as it goes along. I think that the software is operating more akin to how humans decipher Morse.

Well, I'm not going to re-interpret how the human brain works, but I think the operative phrase is "adaptive re-programming" (more or less). Some of that "adaptive" stuff has been operating in sonar electronics for over two decades. Sonar apparently used the first "waterfall" displays to interpret sounds under water...in order to separate 'fish from foul' (so to speak) of all those low frequency sounds.

I look at this new product as a very nice peripheral to interpret on-off keying for those of us who don't really care to bother with audible on-off keying communications. Since my human brain is highly adaptive to visual input, I think of it as a good adjunct to 'see' what PARTS of the [HF] ham bands are doing. Also, radio contesting has no personal interest to me so my interest would only be in 'reading the mail' to find out what is going on in the low ends of the HF ham bands.

I have a fondness for electronics aids to human senses and appreciate my Icom 746's audio filtering. The old BFO in superhets might be the very first 'aid' to hearing on-off keying signals...compared to the hiss and noise from old crystal sets!

The 746Pro also includes a little 5-level ('Baudot') teleprinter reader, apparently included as an afterthought in Icom's control system. A single line tiny display, it isn't much, but their internal control micros probably had enough program code space to include it. Too bad (for me) that Icom didn't also add the 8-bit ASCII TTY decoder. :-)

Personally, I LIKE to see these new aids to anything. About 35 years ago I got to use the equivalent of VNAs for RF measurement (HP Network Analyzer using an ancient HP 16-bit minicomputer) at work and thought it a FANTASTIC improvement over the grunge-work manual measurement on RF. Now I can get (if I want) reasonably-low-priced VNAs (with precise frequency control) from two amateur radio companies and Antenna Analyzers (with internal VNA) from at least six others. Antenna Analyzers beat the heck out of using a Noise Bridge and a scientific calculator to interpret the Bridge reads into meaningful complex quantities. :-)

at the risk of an OT digression who does this work, that is do you
have an opion on how well the machine does as this sounds neat to me

W4LT tested it last night on 40 meters. After the contest is over I'll see if I can find & excerpt his post. He seemed fairly impressed.

I wonder to what degree the improvement in Morse sending has made this kind of project more effective? The quality of transmitted Morse (in terms of spacing & element lengths being correct - and in terms of fewer errors) has improved considerably since I got my license in 1973.

Certainly the ascendancy of keyers has helped, but even then, older software had some issues with noise, signal level, and adjacent signals.

I'm a real dilletente on the subject, but I think that the older versions of CW decoding software relied heavily on timing to try to emulate the human brain's decoding of Morse. Trouble is, I don't think our brains work that way, because humans can decode some Morse that is sent pretty badly.

But the old software could have big problems when the sender didn't use the proper space timing, or when the dashes or dots were significantly long or short. The human just adapted in real time.

I think that is what the new software is starting to tackle.

Available softwares for such time-related, adaptive programming have been aided by technology such as flash memory and larger memories in microprocessors (as stand-alone decoders). Adaptive programming has been known in computer programming for at least 50 years but hasn't had a resurgence until about a decade ago. The main thing about its 'non-use' for morse code is that there really isn't a big market for it outside of amateur radio.

Elsewhere there is the speech decoder used with a very few telephone menu robots that can recognize numbers and certain letters or words. A bundle with my WordPerfect 8 upgrade word processor (slightly over 8 years old now) was 'Dragon Naturally Speaking' which would process word sounds and convert them to text. 'Naturally Speaking' would 'learn' the sound patterns associated with a particular voice (repetition required to have the adaptive programming do the 'learning'), then go to a look-up table in memory and do the conversion into speech. Outside of trying out, I found that my faster typing skills (learned over six decades) would serve me better...the little free microphone was useful for other things...:-)

Adaptive programming is found in some higher-level visual graphics processors used in motion picture and television production around this corner of the USA. Those allow 'in-between' frame merging of movements similar to what was done in cartoon animation in the early 1930s. [lower-rank animators were assigned the tasks of making the 'in-between' drawings of major animator's drawings for the final inking and painting, hence the name 'in-betweeners'] There has been a MAJOR field of work in motion graphics software in the last couple of decades, but that is a niche activity, although a much more profitable one.

The little credit-card-sized MFJ 'morse reader' is more of a toy since it has rather simplistic adaptive programming ('learning' involved only in setting the approximate rate of words sensed) but is somewhat successful in that. More advanced adaptive programming would require more memory and processing of relative space-dot-dash sensing on-the-fly to determine the 'bad fists' of certain morse senders. As of the end of 2007, Microchip has brought out several newer microcontroller models with much more memory and faster operating clock speeds for those wanting to experiment with useful adaptations.

It is less of a 'softwares' comparison of 'old' v. 'new' but rather an intellectual experimentation project of applying adapative programming methods to such 'learned human' activities. It is probably NOT 'the way the brain works' (nobody is really certain of that anyway) but that is irrelevant in the task of determining the time-related sound patterns of on-off keying beeps and translating that back to some form of text that anyone (who knows the western alphabet) can read. It is an eminently POSSIBLE thing to do and I'm glad that some are willing to tackle the task.

73, Len AF6AY

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group every month. You are now reading the first article, which explains what rec.radio.info is, and answers some Frequently Asked Questions. The second article is titled Posting Guidelines, and you only need to read it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the next
" -- " string. The sections available are:

- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet community with a resource for information, news, and facts about any and all things radio.

All the other rec.radio groups are intended for discussions and general chit chat about radio. Rec.radio.info will contain informational, factual articles only. Follow-ups are redirected to an appropriate other group, and further discussion (if any) will not take place in rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

```
/Newsgroups:.*[ ,]rec\.radio\.info/h:j
```

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

```
rec.radio.info:!s/:^
```

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

```
sequence
rec.radio.info
rec.radio.
```

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

In slrn, according to the srln FAQ, the following scoring rule will |
allow you to see rec.radio.info-crossposted bulletins, while still |
filtering out most SPAM or "Velveeta" crossposted to more than 2 |
newsgroups (as such articles usually do not contain a 'Followup-To:' |
header): |

```
Score: -9999                                                               |
        Newsgroups: ,.*,                                                   |
        ~Followup-To: .                                                    |
```

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

   rec.radio.swap may be more deserving of the posting in any matter.

   Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group and to rec.answers/news.answers every month. You are now reading the second article, which explains how to submit something to rec.radio.info, and which answers some Frequently Asked Questions about the submission process. The first article is titled "Welcome to rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post the article to rec.radio.info, as you would do with any other newsgroup. The difference is that the software recognizes the special status of rec.radio.info as a moderated group, and will e-mail your article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the transparency offered by the newsreading software is probably more convenient.

If you have any questions, or wish to deal with some administrivia with the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have to read it first, give it the stamp of approval, and finally send it on to the group. We will attempt to read and decide on all submissions within 72 hours at the very least, though we will probably be able to process submissions much faster in actual practice.

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc	Amateur (ham) radio and related matters
rec.radio.amateur.packet	Amateur Packet Radio discussions
rec.radio.amateur.policy	Amateur Radio practices, rules, etc.
rec.radio.noncomm	Non commercial radio discussions
rec.radio.shortwave	International broadcasting on the 'HF' bands
rec.radio.cb	Citizens Band (27 MHz) discussion
rec.radio.scanner	Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated	Amateur radio practices, rules, etc.
rec.radio.broadcasting	Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

```
 Message-ID: <$opa.55.1994@ampr.org>                                      |
```

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

==> KOSOVO AND DXCC

Kosovo declared its independence from Serbia on February 17, setting off new speculations on what this means to Amateur Radio and specifically, to the DXCC program. ARRL DXCC Manager Bill Moore, NC1L, said he understands that there are many questions about the DXCC status of Kosovo, especially concerning whether or not the new state will be added to the DXCC list.

Moore said the DXCC rules, modified in 2000 to better handle inclusion to DXCC, are clear on how additions can be made: "For inclusion in the DXCC List, certain conditions must be met. Gaining entry on the DXCC List is not contingent upon whether operation has occurred or will occur, but only upon the qualifications of the Entity."

According to Moore, adding Kosovo to the DXCC List would be considered under the "Political Entity" DXCC guidelines. The DXCC rules state that "Political Entities are those areas which are separated by reason of government or political division. They generally contain an indigenous population which is not predominantly composed of military or scientific personnel."

Kosovo, according to the DXCC rules, would then be added to the DXCC List as a Political Entity if it meets one or more of the following criteria:

* The entity is a UN Member State.

* The entity has been assigned a call sign prefix block by the ITU. (The exceptions to this rule are international organizations, such as the UN and ICAO. These Entities are classified under Special Areas, 3.a; and Ineligible Areas, 4.b.) A provisional prefix bloc assignment may be made by the Secretary General of ITU. Should such provisional assignments not be ratified later by the full ITU, the Entity will be removed from the DXCC List.

* The Entity contains a permanent population, is administered by a local government and is located at least 800 km from its parent. To satisfy the "permanent population" and "administered by a local government" criteria of this sub-section, an Entity must be listed on either (a) the US Department of State's list of "Dependencies and Areas of Special Sovereignty" as having a local "Administrative Center," or (b) the United Nations list of "Non-Self-Governing Territories."

"New Entities satisfying one or more of the conditions above will be added to the DXCC List by administrative action as of their 'Event Date.' Kosovo will be added to the DXCC list if it becomes a member of the UN, or if it receives a prefix bloc from the ITU. The third condition does not apply," Moore said. "The 'Event Date' will be either the date Kosovo became a UN member or it receives its prefix from the ITU. Contacts made before the Event Date will be counted as Serbia."

==> HOMEBREW CHALLENGE WINNERS ANNOUNCED

The Homebrew Challenge (HBC) <http://www.arrl.org/qst/hbc/> was announced in the August 2006 issue of QST and on the ARRL Web site. Entrants were encouraged to submit a home-constructed voice and CW, 5 W minimum output radio by August 1, 2007. The radio had to be reproducible from no more than $50 of new parts.

In October of 2006, by popular demand, HBC organizers at ARRL offered a second category to the competition that allowed a PC to be used as part of the control, display or processing function; it could also be used to program a microprocessor.

QST Technical Editor Joel R. Hallas, W1ZR, found four entries that passed the documentation and price confirmation check. These entries also went through an ARRL Laboratory evaluation to make sure that they met all the ARRL and FCC technical requirements before being subjected to a thorough operational evaluation by ARRL staffers.

The judges announced two winners in the HBC, one in each category. The PC-supported winner was Jim Veatch, WA2EUJ, who gathered the most points in the evaluation by our judges; an article describing his radio will appear in the May 2008 issue of QST. In a way, Hallas said, Veatch's radio could be considered a contender for the other award as well, since he has agreed to provide his firmware onto builders' processors at no cost if they don't have programming capabilities.

The winner with a radio totally without use of a PC is Steve Weber, KD1JV, who came in close behind in overall scoring by the judges. His radio will be described in a subsequent QST article.

In addition to these winners, entries were received from Dave Cripe, NM0S, and Doug Pongrance, N3ZI. Hallas said the judging panel enjoyed exploring and operating each radio; each radio had its strong points and unique features, making selection difficult. The judges spent many hours operating, comparing and scoring the radios based on their technical proficiency, as well as operating features and reports from distant stations.

Hallas thanked the judges for contributing their time to this effort: W1AW Station Manager Joe Carcia, NJ1Q; ARRL Lab Manager Ed Hare, W1RFI; Contest Branch Manager Sean Kutzko, KX9X, and QEX Editor Larry Wolfgang, WR1B. Hallas also served as a judge. Almost all the judges have considerable experience operating low power (QRP) radios in contests and other venues. Hare has served as a judge for various QRP equipment contests sponsored by the QRP Amateur Radio Club International (QRPARCI) and noted these entries stood well in comparison to many he has judged previously.

Hallas also thanked ARRL Lab Engineer Michael Tracy, KC1SX, for fitting in HBC testing between product review evaluations and his other responsibilities, as well as for helping set up the operational evaluation suite in the newly renovated W1HQ/W1INF Headquarters Operators Club shack.

==> NEW ARRL SECTION MANAGERS IN SAN DIEGO, LOUISIANA AND VIRGINIA

In the only contested Section Manager race this winter, Steve Early, AD6VI, was elected ARRL San Diego Section Manager with 332 votes; his opponent, Pat Bunsold, WA6MHZ, received 264 votes. Election ballots were counted February 19 at ARRL Headquarters.

Early, whose two-year term begins on April 1, 2008, said that he is looking forward to the opportunity to serve. He has been active in several Amateur Radio clubs and ARES, as well as providing public service support to agencies such as the American Red Cross and CERT (Community Emergency Response Team); he is president of the Palomar Amateur Radio Club (PARC). Early takes over from Harry Hodges, W6YOO, who was appointed to fill the vacant position in November 2007.

Louisiana will also be getting a new Section Manager on April 1. Gary Stratton, K5GLS, of Shreveport, the Louisiana Section Emergency Coordinator for the last three years, will be taking the reins from Mickey Cox, K5MC. Cox, who has served as Section Manager for the past eight years, decided not to run for another term of office.

Carl Clements, W4CAC, of Portsmouth, Virginia, returns to the Virginia Section Manager's post on April 1. He previously served as Virginia Section Manager from May 2001-March 2006. Glen Sage, W4GHS, the outgoing Virginia Section Manager, did not seek a new term of office.

The following incumbent ARRL Section Managers did not face opposition and were declared elected for their next terms of office beginning April 1, 2008: Pete Cecere, N2YJZ, Eastern New York; Eric Olena, WB3FPL, Eastern Pennsylvania; Tim Slay, N4IB, North Carolina; Richard Beebe, N0PV, South Dakota, and Bob Schneider, AH6J, Pacific.

==> WHAT'S COMING UP IN THE MARCH/APRIL ISSUE OF QEX

The March/April issue of QEX is out, and it is full of theoretical and practical technical articles that you don't want to miss.

In this issue, Milt Cram, W8NUE, and George Heron, N2APB, describe the design and construction details of their "NUE-PSK Digital Modem." The authors provide complete technical details as a companion to their March QST article. Cornell Drentea, KW7CD, presents some schematic diagrams and circuit descriptions for his "Star-10 Transceiver," in Part 2 of this series.

Jack Smith, K8ZOA, provides an interesting look at carbon composition resistor aging as well as inductive and capacitive effects of other resistor construction types in "Carbon Composition, Carbon Film and Metal Oxide Film Resistors." Contributing Editor L. B. Cebik, W4RNL, looks at several impedance matching options for modern HF and VHF beam antennas in "Antenna Options."

Would you like to write for QEX? It pays $50 per printed page. Be sure to check out the Author's Guide <http://www.arrl.org/qex/#aguide> for more information. If you prefer postal mail, please send a business-size self-addressed, stamped envelope to QEX Author's Guide, c/o Maty Weinberg, ARRL, 225 Main St, Newington, CT 06111-1494.

QEX is edited by Larry Wolfgang, WR1B, and is published six times a year. The subscription rate for ARRL members in the US is $24. For First Class US delivery, the rate is $37 for members, $49 for nonmembers. For international delivery via air mail, including Canada, the subscription rate is $31 for members, $43 for nonmembers. Subscribe to QEX today <http://www.arrl.org/qex>.

==> NAME THE W1HQ MASCOT

W1HQ, the Laird Campbell Memorial HQ Operators Club, has a mascot in need of a name. Membership Manager Katie Breen, W1KRB, purchased the six-foot long stuffed yellow-green toy snake as a way to make the refurbished station a bit friendlier.

Breen said, "In addition to the physical upgrades to W1HQ, we realized that it is our club -- therefore it should be fun too! It just seemed so natural to have a mascot for our club station. The snake comes in handy when stressed out trying to get that DX that is just out of reach! With all the serious sides of ham radio, it's important to remember that it is fun -- and not to take ourselves too seriously sometimes!"

Breen and the rest of the W1HQ team are calling on the Amateur Radio community to help give the as-yet unnamed snake a name: "We encourage all amateurs to submit a name for the snake. We will get together and go over all the entries to choose the best one and announce the winner at our W1HQ special event around the first of April."

"I will be blogging again and posting YouTube videos of the event," Breen said. "We'll announce the winner over the air, on the blog and in video, too." She previously blogged the Hello-Live! event and the W1AW HF Open House.

The contributor of the winning entry will receive their choice of a current edition of "The ARRL Operating Manual," "The ARRL Handbook for Radio Communications" or "The ARRL Antenna Book." All entries should be family-friendly (G-rated) and sent via e-mail <w1hqsnake@arrl.org>.

==> KANSAS HAMS WORKING TO GET ANTENNA BILL PASSED

After an unsuccessful attempt eight years ago to get a PRB-1 type bill signed in Kansas, radio amateurs in that state are trying once again. A hearing for HB 2805 <http://www.kslegislature.org/bills/2008/2805.pdf> in front of the Kansas House Elections and Governmental Organization Committee is scheduled for Monday, February 25. The bill, "An Act Concerning Telecommunications; Establishing The Kansas Emergency Communications Preservation Act," was written by Rep Arlen Siegfreid (R-15).

JD Spradling, KC0NYS, of Olathe, Kansas, is chairman of the committee <http://www.hamsforkansas.org/> leading the charge to get a PRB-1 <http://www.arrl.org/FandES/field/regulations/local/prb-1.html> law on the books in that state. He commented: "Many local zoning boards don't give FCC regulations adequate consideration when making zoning decisions and across the country amateurs have found that state laws are a more effective tool for influencing local zoning regulations. So beginning in the 1990s, amateurs began lobbying for legislation that would place PRB-1-type language into their state laws."

The bill states that if a municipality takes any action that regulates the placement, screening, number or height of a station antenna structure, the action must "Reasonably accommodate federally licensed amateur radio service communications; and constitute the minimum regulation practicable to carry out the legitimate purpose of the governing body." Antenna support structures that were constructed prior to the bill's effective date (if passed) "are exempted from subsequent changes in zoning regulations...and may be repaired as required."

Spradling said the bill was introduced on February 11 and referred to committee the next day. The Committee will hear the bill on Monday, February 25 in Room 784 in the Docking Building in Topeka at 3:30. If hams plan on testifying Monday, please e-mail <c3smaxi@mokancomm.net> Spradling the written testimony so he can prepare a final list to give to the Committee Chairman Secretary. "If you cannot be present on Monday, you can always send written testimony and I will make sure it becomes part of the written record," Spradling said.

==>SOLAR UPDATE

Tad "Tipt round with silver from the Sun's bright eyes" Cook, K7RA, this week reports: No sunspots yet, and the sun has been blank for 17 days. For a week, one sunspot was visible prior to the spotless period, and that followed a 20-day spotless run. NOAA and the US Air Force have predicted daily solar flux (the amount of energy we receive from the Sun at a wavelength of 10.7 cm or 2800 MHz) right at 70 recently, but bumps that to 72 for March 1, continuing into April. This is a minor change, but perhaps this signals that forecasters don't expect any more spots during February. NOAA also predicts low geomagnetic activity until February 28-29 with the planetary A index at 5 through February 26, then 8, 20, 15 and 12 through March 1. Geophysical Institute Prague predicts quiet conditions February 22-26, quiet to unsettled February 27 and unsettled February 28. Sunspot numbers for February 14-20 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 70.6, 69.7, 70.3, 71.1, 71.2, 71.7 and 70.9 with a mean of 70.8. Estimated planetary A indices were 15, 10, 9, 5, 12, 12 and 7 with a mean of 10. Estimated mid-latitude A indices were 10, 8, 8, 3, 9, 10 and 5 with a mean of 7.6. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the NCCC Sprint is on February 22. The Russian PSK WW Contest is February 22-23. Look for the CQ 160 Meter Contest (SSB), the REF Contest (SSB), the UBA DX Contest (CW), the Mississippi QSO Party and the North American QSO Party (RTTY) on February 23-24. The High Speed Club CW Contest is February 24. The North Carolina QSO Party is February 24-25 and the SKCC Sprint is February 27. Next weekend is the ARRL International DX Contest (Phone) on March 1-2. The NCCC Sprint is February 29 and the Wake-Up! QRP Sprint is March 1. Thelow band portion of the Open Ukraine RTTY Championship; the high band portion is March 2. The DARC 10 Meter Digital Contest is March 2 and the RSGB 80 Meter Club Championship (Data) is March 3. The ARS Spartan Sprint and another running of the NCCC Sprint are March 4. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, March, 9, 2008, for these online course sessions beginning on Friday, March, 21, 2008: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* 2008 Field Day Web Page Good to Go: The official 2008 ARRL Field Day Web page <http:// www.arrl.org/FieldDay> is up and running. The page

includes a summary of available resources, with links to Field Day forms and rules, logos and reference links. There is also a link for ordering commemorative Field Day T-shirts, pins and other supplies. ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R, said supplies will begin shipping in early March, but it's not too early to place a pre-order now. Radio clubs are encouraged to order early.

* ARRL Handbook a "Must-Have" for Broadcast Industry: A broadcast industry trade publication has named "The ARRL Handbook for Radio Communications" as the top-rated reference book of broadcast engineers. In an article <http://radioworld.com/pages/s.0047/t.11230.html> in the February 13 edition of "Radio World," the various annual versions of the "Handbook" received the most mentions of necessary literature on the engineer's desk. Doug Fearn, K3KW, an independent handcrafter of audio equipment and a former chief engineer, said, "Not only did I learn electronics from that book, but the old editions are superb examples of how to explain things clearly." Andy Butler, senior director for systems engineering at PBS and a former president of the Society of Broadcast Engineers (SBE), also recommended the "Handbook," calling it "The best, most comprehensive, cheapest guide to technology you will ever need."

* From the DXCC Desk: ARRL DXCC Manager Bill Moore, NC1L, reports that the 3Y0E DXpedition to Bouvet Island from December 2007-February 2008 has been approved for DXCC credit.

* W1AW Endowment Campaign to Start in March: The W1AW Endowment campaign is ready to launch next month. Contributions to help preserve and maintain W1AW, the Hiram Percy Maxim Memorial Station <http://www.arrl.org/w1aw.html> will help ARRL continue the work to upgrade the Amateur Radio equipment that sends the daily bulletins and code practice sessions, as well as equipment in the visitor operating suites. All new antennas have been installed and filters added in 2007. With more new transceivers and amplifiers, W1AW will continue to live up to its role as the flagship Amateur Radio station. Contributions can be made by mail, telephone (860-594-0397) or online <http://www.arrl.org/endoww1aw>.

* Rod Dinkins, AC6V (SK): Rod Dinkins, AC6V, of Oceanside, California, passed away Saturday, February 16. An ARRL member, he was 77. Many hams considered Dinkins, the author and developer of the Web site www.ac6v.com, <http://www.ac6v.com> to be the final word on anything to do with ham radio. His Web site has more than 130 pages covering thousands of Amateur Radio-related topics, everything from amps (A) to impedance (Z); some hams have said that if a topic is not found on or linked to Dinkins' Web site, it's safe to say that topic does not exist in the Amateur Radio world. Dinkins was also the author of a number of ham radio books, including "FM101x: Using FM Repeaters" and "DX101x: HF + 6 Meters DXing." Dinkins started in radio in the late 1940s with his Knight Kit Ocean Hopper receiver, listening in to the ham bands. In 1977, he received his Amateur Radio license with call sign WA6WTO. He served as an Aviation Electronics Technician from 1951-1955. Re-entering civilian life, Dinkins spent four years as an electronics instructor, followed by two years as a vocational electronics teacher at a junior

college. For more than 30 years, Dinkins worked in the aerospace industry as an electronics technical writer. He was a member of the San Diego DX Club (SDDXC) and the Palomar Amateur Radio Club (PARC), and was the former newsletter editor of the Northern California DX Club (NCDXC). Son Jeff has hosted his father's Web site for the past five years and has plans to keep it up and running; Jeff plans on getting his Amateur Radio license and applying for his father's call sign. Dinkins is survived by his wife Karla, sons Jeff and Steve and two grandchildren, Rory and Ewan. Jeff Dinkins told the ARRL that a funeral with full military honors will take place March 13 at Fort Rosecrans National Cemetery in San Diego.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.)

Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Amateur Radio Newsline" Report 1593 - February 22, 2008

Amateur Radio Newsline report number 1593 with a release date of Friday, February 22nd, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The SouthEastern Repeater Association announces the beginning of digital voice repeater coordination, hams answer the call as floods hit Hawaii and the next Global Amateur Radio Emergency Communications Conference will take place this spring in Germany. Find out the details on Amateur Radio Newsline" report number 1593 coming your way right now.

(Billboard Cart Here)

REPEATER COORDINATION: SERA ANNOUNCES DIGITAL VOICE BANDPLANS

Someone had to take the lead in coordinating digital voice repeaters and the SouthEastern Repeater Association has. While not the first digital voice repeater plan, it represents the largest geographic area and likely will have an impact on neighboring states and those states neighbors. Amateur Radio Newsline's Don Carlson, KQ6FM has the details:

--

Acting on a motion presented by Mississippi Director Steve Grantham, AA5SG, the giant SouthEastern Repeater Association has adopted provisions to allow for the introduction of digital voice technology systems.   This includes such entities as P 25 and D-Star repeaters.

To make this happen association President Roger Gregory, W4RWG, appointed a working committee to implement the needed changes on the groups web site. While the web presentation is described as a work-in-progress there are already links to the newly posted 144 to 148 MHz and 420 to 450 MHz Frequency Utilization Plans.

And it appears as if the SouthEastern Repeater Association has taken the positron that the introduction of digital voice technology must have minimal impact on all existing analog operations in both the repeater and non repeater portions of any band. A quick glance shows that on both bands the coordinating body has chosen to keep most, though not all, digital voice operation within current repeater subbands. It uses interleaving between existing F-M repeaters to accomplish this.

But the committee has a lot more work ahead of it to make this all happen smoothly. This includes modifying any association documents or forms requiring change. Its also tasked with assisting district coordinators in matters pertaining to the introduction of such digital repeaters. The committee will also continue to study and bring forth new information as needed to facilitate ongoing effective digital repeater coordination efforts.

Whether or not the SouthEastern Repeater Association plan will be adopted nationally is not known, but it opens the door to a coordinated effort to introduce digital voice repeaters while protecting all other spectrum users. And that's definitely a step in the right direction.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM

--

For those not aware, the SouthEastern Repeater Association is the nations largest repeater band-planning body. It provides voluntary frequency coordination for Amateur Radio repeaters in Georgia, South Carolina, North Carolina, Virginia, West Virginia, Kentucky, Tennessee, and Mississippi. The action on digital voice repeaters came at the organization's winter board meeting on January 5th. You can see its new 2 meter and 70 centimeter bandplans on line at:

OVERVIEW OF SERA PLAN:
http://www.sera.org/D-Star%20Position%20Statement%20-%203.htm

SERA 144-148 MHz Frequency Utilization Plan: http://www.sera.org/2.html

SERA 420-450 MHz Frequency Utilization Plan: http://www.sera.org/440.html

(From SERA release)

**

REPEATER COORDINATION: UTAH VHFS ON DIGITAL REPEATER CHANNEL SPACING

Still with digital voice repeaters, word that the Utah VHF Society has produced what observers are calling a very useful article on channel spacing for D-Star digital relay devices. Titled "Analysis and recommendations of channel spacing for D-Star operations on the VHF and UHF amateur bands" the article addresses the issues of co-channel D-Star interference. It also covers adjacent channel interference issues between D-Star and existing analog FM systems.

The article is well worth the time to read. You will find it on line at www. utahvhfs.org/dstar_channel_spacing/html (From Utah VHFS release)

**

RESCUE RADIO: HAMS RESPOND TO THE FLOODS IN HAWAII

Hams in Hawaii were quick to respond in early February when heavy rain caused flooding in many parts of the state. According to ARRL Pacific Section Manager Bob Schneider, AH6J, Skywarn and several nets were activated. Information came in from several areas including Hawaii County Civil Defense.

IRLP and Echolink were used in conjunction with VHF and HF radio to keep the information flowing. Harvey Motomura, AH6JA, also sent several test messages from Hawaii County C-D by Winlink. This, to prove that e-mail is still possible even if wire and cable connections are lost.

Even though hurricane season in Hawaii officially ended last November 30th, continued weather problems remind hams in the Island State that they are never completely out of danger. (From Hawaii SM Report)

**

RESCUE RADIO: GAREC-08 AT FREDRICHSHAFEN HAM SHOW

The fourth Global Amateur Radio Emergency Communications Conference, GAREC-2008, will take place on June 26th and 27th. This, in conjunction with the 2008 Ham Radio convention in Friedrichshafen, Germany.

The event will be organized by the IARU Region 1 Emergency Coordinator, Seppo Sisatto, OH1VR with the team that already put together the previous conferences in Tampere, Finland, in 2005 and 2006. Global Amateur Radio Emergency Communications Conference 08 will focus on the cooperation among IARU member societies with specialized groups working on emergency communications in the Amateur Radio Service.

General information on subjects such as travel and accommodation is available at http://www.hamradio-friedrichshafen....l/en/index.php and details of program. The URL for on-line registration will be announced on the IARU pages at http://www.iaru.org/emergency/ in a few weeks. (HB9AQS)

**

RESCUE RADIO: THE UN AND INDUSTRY COMBINE IN RESPONSE EMCOMMS

But hams are not the only ones looking at the future of first response emergency communications. A new United Nations program to train communications experts to respond faster in dangerous and hostile environments got a boost at the recent World Mobile Congress in Spain. This with word that the Vodafone Group Foundation has pledged $6.3 million for the effort. Bruce Tennant, K6PZW, has more:

--

According to the news release, training and deployment in time of crisis will be handled through Vodafone's technology partnership with the private United Nations Foundation. The U.N.'s World Food Program is designated as the lead communications agency in international crises. This, by nature of its longtime first-responder role.

By way of example of what these and other fly-away operations can do, when a suicide bomber struck a U.N. office in Algeria last December it not only killed 17 U.N. employees. The bomb also took out the agency communications infrastructure necessary for it to respond to the tragedy. Two communications experts were dispatched from Dubai with satellite telephones and a radio transmitting gear. They were up and running less than 24 hours after the attacks providing emergency communications support needed in the aftermath of this terrorist attack.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Obviously there is a lot of interest growing in split second emergency communications response, world wide. (Vodafone)

**

WORLDBEAT - RWANDA: EA5RM VS DJ9ZB OVER RWANDA

A big rift in D-X circles over a team of German operators beating out a Spanish operator to be the first to activate Rwanda. Antonio Gonzalez, EA5RM, who now also holds the call sign 9X0R says in a statement posted to his website that DJ6SI, DK2WV and DJ9ZB used political lines of communications that he developed to slip in and operate from that rare one before his DXpedition could arrive.

EA5RM claims that he was the one who traveled to Rwanda and secured permission for hams to once again take to the airwaves. He says that as a courtesy that he informed the German DX Foundation of his plans. He also requested that the Federation supply a member to his team

Gonzalez says that instead German DX'ers DJ6SI, DK2WV and DJ9ZB got their own Rwandan licenses and quickly mounted the 9-X-Zero operation that was on the air through February 21st. EA5RM says that because of this that he is returning the German DX Foundation funds donated to his upcoming 9X0R operation because he and his operators believe that the actions of its President, Franz Langner, DJ9ZB, are not the proper ones to promote amateur radio and DX. Gonzalez also asks everyone who took part in the German lead operation to and remember which kind of hams you were trying to contact.

No response to EA5RM's charges from DJ9ZB or his team They have been to busy running the pileups that they have been crating on the air from Rwanda. (EA5RM from various DX news sources)

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Conejo Valley Amateur Radio Club net serving Thousand Oaks, California

(5 sec pause here)

**

PUBLIC SERVICE: VOLUNTEERS NEEDED FOW WINTER OLYMPICS IN 2010

The 2010 Winter Olympics is seeking amateur radio volunteers. This with the announcement that the Vancouver Olympics Committee has given Radio Amateurs of Canada details of their search for ham radio volunteers to assist during the 2010 Olympic Winter Games and Paralympic Winter Games.

Of the 25,000 volunteers required, Amateur Radio operators are especially needed to help in technical roles during the events, and perhaps earlier. Volunteers must have their own local accommodation in Greater Vancouver or Whistler areas.

The on-line volunteer application form at www dot vancouver2010 dot com includes space to list skills and experience. If the applicant wishes a communications or technical role, the or she should add a key phrase on their application form to make it easy for planners to identify them. And on the fifth application page, add the words "Amateur Radio Operator" in a box called "Additional Information."

Again, if you want to volunteer to provide communications support for the 2010 Olympic Winter Games and Paralympic Winter Games go to www dot vancouver2010 dot com and fill out the form. (Radio Amateurs of Canada)

**

ENFORCEMENT: FCC TELLS TEXAS HAM TO STAY OFF TWO REPEATERS

The FCC has told a Texas ham that he must obey the orders of repeater trustees who want him to keep off of their repeaters. In a January 29th Warning Notice to Travis L. Maltese, AD5CT, of Edna the FCC states that he trustees of the W5DSC and K5SOI repeaters have requested in writing that Maltese refrain from use of the repeaters.

The FCC say that the letters were issued as a result of Maltese alleged failure to follow operational rules set forth by the licensee/control operators of the repeater systems for their users. As such, the regulatory agency says that Maltese will be expected to abide by the requests to stay off the W5DSC and K5SOI systems and any other such requests by repeater licensees, control operators or trustees.

The FCC notice also warns Maltese that should he use these repeaters again after receipt of its letter, that the agency will initiate enforcement action against his license. This could include revocation, monetary forfeiture of his license or a modification proceeding to restrict the frequencies on which AD5CT may operate. Fines normally range from $7,500 to $10,000. (FCC)

**

ENFORCEMENT: FLORIDA MAN TOLD TO STAY OFF HAM BANDS

And the FCC has warned a Florida non-amateur to stay off the ham bands. In its January 29th letter to Joseph Goldberg of Tavernier, the regulatory agency warns him that he could face a fine of up to $10,000 if he's again caught operating without a license. The FCC gave no other details but did add that this is the last warning that Goldberg will receive. (FCC)

**

RADIO LAW: COMCAST UNDER FCC SCRUTINY OVER INTERNET DELAYS

The FCC is looking into complaints that a telecommunications giant is tinkering with communications over the Internet. Jim Davis, W2JKD, is here with the details:

--

FCC Chairman Kevin Martin says that the FCC will investigate complaints that Comcast Corporation actively interferes with Internet traffic as its subscribers try to share files online. January 8th release says that a coalition of consumer groups and legal scholars asked the agency in November 2007 to stop Comcast from discriminating against certain types of data. The two groups also asked the FCC to fine the nation's No. 2 Internet provider $195,000 for every affected subscriber.

Comcast denies that it blocks file sharing, but acknowledged that it was "delaying" some of the traffic between computers that share files. The company said intervention was necessary to improve the surfing experience for the majority of its subscribers.

The FCC's policy statement makes an exception for "reasonable traffic management." Comcast has said its practices fall under that exception.

I'm Jim Davis, W2JKD.

--

The government will be looking to see if Comcasts actions fit the permitted exception. (FCC)

**

RADIO REGULATIONS: THE FCC CHANGES BANKS

U.S. Bank has replaced the Mellon Bank as the incoming lockbox for all FCC programs except auction related payments. A lockbox bank serves as the filing and processing agent for a corporation or government entity. Fees and payments along with associated identifying information, are sent directly to the lockbox account. The address of U.S. Bank is 1005 Convention Plaza; SL-MO-C2-GL; St. Louis, MO 63101. (RW)

**

RADIO BUSINESS: MOTOROLA MAY OPT OUT OF THE CELLPHONE BUSINESS

Motorola says that it is considering separating its loss-making mobile phone unit. The world's third-largest mobile phone maker has been losing market share to market leader Nokia Corp and Samsung Electronics. It now says that is looking at a structural and strategic realignment to help it recapture market share and enhance shareholder value. Options include spinning off or selling the phone division, which accounts for about half of revenue.

Motorola is best known for its commercial two-way land mobile radio equipment. The company recently completed a deal to acquire control of Vertex Standard Corporation which manufactures its own line of two-way land mobile equipment and Yaesu brand Amateur Radio gear. It also manufacturers television set-top box and network equipment.

As already noted, potential suitors for it mobile telephone division are believed to include rivals such as Samsung Electronics, which took the number two ales position from Motorola in 2007, or number five ranked LG Electronics.

Contrary to the rumors being circulated by uninformed Internet bloggers and web rumor mongers, any sale of Motorola's mobile phone business is not expected to in any way impact on the manufacture and sales of Yaesu brand ham radio gear. (Published reports, ARNewsline")

**

NAMES IN THE NEWS: ARRL SECTION MANAGERS ELECTED

Some names in the news. The ARRL reports that in the only contested Section Manager race this winter, Steve Early, AD6VI, has been elected ARRL San Diego Section Manager. Early has been active in several Amateur Radio clubs and ARES, as well as providing public service support to agencies such as the American Red Cross and the Community Emergency Response Team.

Louisiana will also be getting a new Section Manager. Gary Stratton, K5GLS, of Shreveport, the Louisiana Section Emergency Coordinator for the last three years, will be taking the reins from Mickey Cox, K5MC. Cox, who has served as Section Manager for the past eight years, decided not to run for another term of office.

Carl Clements, W4CAC, of Portsmouth, Virginia, returns to the Virginia Section Manager's post. He had previously served in this position from May 2001 to March 2006. Glen Sage, W4GHS, the outgoing Virginia Section Manager, did not seek a new term of office.

All other incumbent ARRL Section Managers facing re-election faced no opposition and were declared winners. Ballots were counted at ARRL Headquarters on February 19th. All begin their new terms of office on April 1st. (ARRL)

**

THE SOCIAL SCENE: MT BEACON HAMFEST IN NY IN APRIL

Turning to the ham radio social scene, word that the 2008 Mt. Beacon Amateur Radio Club Hamfest takes place on Sunday April 1. The venue is Tymor Park in LaGrangeville, New York. More is on-line at www.wr2abb.org. (WA2BSS)

**

THE SOCIAL SCENE: IOTA DINNER IN CALIFORNIA IN APRIL

The 13th annual Islands On The Air or I-Oh-T-A Dinner will be held on Friday, April 25th, in the Birch Room of the Holiday Inn Hotel and Conference Center in Visalia, California. This, in conjunction with the 58th annual Visalia International DX Convention. In addition to dinner, G3ZAY will present a talk on the Islands On The Air program and how it functions. For additional information regarding this event, please contact: Jim Zimmerman N6KZ, by e-mail to: jimzim1 at mindspring dot com

(OPDX)

**

THE SOCIAL: SCENE: TAPR IN CHICAGO IN SEPTEMBER

The Tucson Amateur Packet Radio Corporation has announced that the 2008 joint Digital Communications Conference with the ARRL will take place September 26th to the 28th. This, at the Holiday Inn Hotel in Elk Grove Village, Illinois, a suburb of Chicago, near O'Hare airport.

The conference is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results and practical applications. Forums will feature the latest developments in Amateur Radio digital communications, as well as demonstrations of emerging digital technology.

More information is available on line at www.tapr.org/dcc.html (TAPR)

**

RADIO ENTERTAINMENT: THE BANK JOB AND HAM RADIO

And a new British movie titled The Bank Job features Amateur Radio. Due for release before months end, the film is a fictionalization of a daring, unsolved robbery, which took place in London more than 35 years ago. In the film, handhelds used by the criminals are intercepted by a ham radio operator who becomes involved in the attempt to catch them. An official website at www.bankjobmovie.co.uk gives 5 movie clips to view. But be aware. This film does carry an R rating. (Southgate)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

**

CHANGING OF THE GUARD: ROD DINKINS, AC6V, S.K.

Some truly sad news out of California's Palomar Amateur Radio Club. Word that Rod Dinkins, AC6V, the man behind the famed www dot ac6v dot com ham radio information website, has become a silent key.

Called the Google of ham radio by some, www dot ac6v dot com quickly became the place to go for information on anything amateur radio related. Its 132 pages contain 700 topics and 6000 links. If its not found on or linked to www dot ac6v dot com its safe to say it does not exist in ham radios world. Rod was also the author of a number of ham radio related books including the Amateur Radio DX Reference Guide and DX 101 for HF and 6 Meters. .

Rod Dinkins started in radio in the late 1940's as an SWL, AM, and ham band listener with a Knight Kit Ocean Hopper receiver but it was not until 1977 that he became a radio amateur with the call WA6WTO. But his career was all radio and electronics. He spent four years in the US Navy during the Korean War as an Aviation Electronics Technician. Re entering civilian life, Dinkins spent four years at Convair in Pomona, California as an instructor of electronics and guided missiles. This was followed by 2 years as a vocational electronics teacher at a Junior college level in Walnut California and over 30 years as an Electronics Technical Writer within the aerospace industry.

Rod Dinkins, AC6V, passed away on Saturday, February 16th at the Tri-City Hospital in the city of Oceanside. He is survived by his wife Karla. At airtime funeral arrangements were pending. (W6VR, others)

**

HAM RADIO IN SPACE SOUTH AFRICA'S SUMBANDILA SAT DELAYED

South Africa's Sumbandila Sat launch has been delayed indefinitely. The satellite, which includes an amateur radio payload, was to have been launched from a Russian submarine last year but arrangements went sour when the two defense authorities could not agree on a reciprocal satellite arrangement.

Word is that the South African Ministry of Foreign Affairs was recently in Russia this week as part of a technical and scientific cooperation mission. Its likely that an alternative launch was to have been discussed. Meantime there is no official comment on what may have transpired and Sumbandila Sat is still sitting in the clean room at the nations Sunspace launch assembly facility. (SA AMSAT)

**

HAM RADIO IN SPACE: HOUSTON SATELLIE NET CHANGES BIRDS

The Houston AMSAT Net has moved to the K-band the SkyScanner Satellite Radio Network on the Galaxy-25 geostationary satellite. The net was formerly retransmitted on the SBS-6 bird over the W0KIE Satellite Radio Network. No reasons was given for the change which took place on February 5th. (ANS)

**

WORLDBEAT - EUROPE: CZECH HAMS TO GET 4 METER BAND

The Czech Telecommunication Office has announced that nations radio amateurs will soon have access to the 4 meter band. The telecommunications regulator plans to issue up to 20 special permits for 70.2 to 70.3 MHz with 10 Watts ERP. This is a band unique to parts of Europe but not available to radio amateurs in I-T-U Region 2. The Czech permits will be valid until 31 Dec 2008. (Southgate)

**

RADIOSPORTS: CQ UPDATES THE WPX AWARD PROGRAM

CQ magazine and W-P-X Awards Manager Steve Bolia, N8BJQ, have announced several changes to that program. Under the new rules, contacts on all bands between 160 and 6 meters will count for W-P-X award credit. In addition, new band endorsements will now be available for 5 MHz, 10 MHz, 18 MHz, 24 MHz and 50 MHz contacts.

And a separate digital W-P-X award has also been added. It covers contacts made on RTTY, PSK and other keyboard modes. 300 confirmed prefixes required for the basic level of the award. digital-mode contacts will also count toward the existing Mixed award, as will those prefixes worked on the newly added bands.

The changes are effective immediately. Details on these and other changes will be published in the March issue of CQ magazine. They are also posted along with the March issue highlights at www.cq-amateur-radio.com. (CQ)

**

DX

In D-X, the 3Y0E Bouvet Island Dxpedition went QRT at 19:15 U-T-C on February 9th. Any contacts made with any station claiming to be 3&0E after that time and date will be considered as fakes. All log issues will be double checked and all operators concerned will be informed of their log status at that time

G3SWH and G3RTE will be active from Georgetown, Guyana, through February 29th. The callsign is 8R1PW. As there have been two operations from Guyana in 2007 which used mainly SSB, their activity is CW only on 160 to 10 meters. WSL via the bureau.

And word that SM4XDJ is active as S21XJ from Dhaka, Bangladesh for a few weeks. He's reportedly operating SSB and digitalmodes during his evening hours and the weekends. QSL via SM4XIH.

And G3TBK will once again be active from Saint Vincent signing J88DR for the March 1st and 2nd ARRL DX Phone Contest and the following week. Activity will be on all HF bands using CW, SSB, RTTY and SSTV. QSL via G3TBK, direct or by the RSGB Bureau.

Look for 11 Lithuanian special event stations to be active with the prefix LY90 from February 16th through March 16th.. This, to celebrate the 90th anniversary of independence in the Lithuanian Republic. QSL as directed on the air.

Lastly, keep an ear open for G3RWF who is active from Uganda as 5X1NH through March 22nd.   His operation will be limited because he is on holiday but he expects to operate all bands except 160m and 6 meters. Modes will be CW, SSB, RTTY and PSK at 100 watts to wire antennas. QSL to G3RWF.

From various DX news sources

THAT FINAL ITEM: NASA SENDS "ACROSS THE UNIVERSE" ACROSS THE UNIVERSE

And finally, using a highly directional antenna NASA has transmitted The Beatles' song "Across the Universe" toward the North Star. The transmission originated from the NASA Deep Space Network of antenna array. It marked the 40th anniversary of the song along with the 45th anniversary of the Deep Space Network and the 50th anniversary of NASA itself.

The transmission is aimed at Polaris in the constellation Ursa Major some 431 light years away. The song is currently traveling toward it at a peed of 186,324 miles per second. The target audience, assuming something is one out there, won't hear the broadcast until the year 2439.

According to a NASA press release the Beatles Paul McCartney responded to the planned broadcast by asking NASA to end his love to the aliens. Yoko

Ono, the widow of Beatle John Lennon, was a pit more introspective. She said that she sees this as the beginning of the new age in which we will communicate with billions of planets across the universe.

Meantime we have been sitting around the Newsline office trying to think of some other songs that NASA might want to beam into space. Two came immediately to mind. First is Metaphor from the off-Broadway show The Fantasticks. The other is a bit more obvious but shows our age. "I Told Every Liittle Star" by songsters Linda Scott recorded back in 1961. (RW)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline". Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's" only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline", P.O. Box 660937, Arcadia, California 91066.

Before we go we want to remind you that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year is now open. Any licensed radio amateur age 18 or younger residing in the United States or Canada is eligible for the award. Full details and both downloadable and on-line nominating forms are in cyberspace at www.YHOTY.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Damron, N8TMW, saying 73 and we thank you for listening.

These are the number of current, unexpired FCC-issued amateur radio licenses held by individuals on the stated dates, and the percentage of the total number of active licenses that class contains.

Percentages may not add up to exactly 100.0% due to rounding.

These totals do not include licenses that have expired but are in the grace period, nor do they include club, military and other station-only licenses.

Effective April 15, 2000, FCC no longer issued new Novice, Technician Plus and Advanced class licenses, so the numbers of those license classes have declined steadily since then.

Also since April 15, 2000, FCC has renewed all existing Technician Plus licenses as Technician. It is therefore informative to consider the totals of the two classes, since the Technician class includes a significant number of Technician Plus licenses renewed as Technician.

Due the renewing of Technician Pluses as Technicians, the number of Novices now exceeds the number of Technician Pluses.

On February 23, 2007, the last Morse Code test element, the 5 wpm receiving test, was eliminated as a requirement.

The ARS License Numbers:

As of May 14, 2000:

Novice- 49,329 (7.3%)
Technician - 205,394 (30.4%)
Technician Plus - 128,860 (19.1%)
General - 112,677 (16.7%)
Advanced - 99,782 (14.8%)
Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total all classes - 674,792

As of February 22, 2007:

Novice - 22,896 (3.5%)
Technician - 293,508 (44.8%)
Technician Plus - 30,818 (4.7%)
General - 130,138 (19.9%)
Advanced - 69,050 (10.5%)
Extra - 108,270 (16.5%)

Total Tech/TechPlus - 324,326 (49.5%)

Total all classes - 654,680

As of February 23, 2008:

Novice - 20,119 (3.1%)

Technician - 297,709 (45.3%)
Technician Plus - 18,973 (2.9%)
General - 142,812 (21.7%)
Advanced - 64,883 (9.9%)
Extra - 112,411 (17.1%)

Total Tech/TechPlus - 316,682 (48.2%)

Total all classes - 656,857

Changes:

>From May 14, 2000, to February 22, 2007:

Novice - decrease of 26,433
Technician - increase of 88,114
Technician Plus - decrease of 98,042
General - increase of 17,461
Advanced - decrease of 30,732
Extra - increase of 29,520

Total Tech/TechPlus - decrease of 9,928

Total all classes - decrease of 20,112

>From May 14, 2000, to February 23, 2008:

Novice - decrease of 29,210
Technician - increase of 92,315
Technician Plus - decrease of 109,887
General - increase of 30,135
Advanced - decrease of 34,949
Extra - increase of 33,661

Total Tech/TechPlus - decrease of 17,572

Total all classes - decrease of 17,935

>From February 22, 2007, to February 23, 2008:

Novice - decrease of 2,777
Technician - increase of 4,201
Technician Plus - decrease of 11,845
General - increase of 12,674
Advanced - decrease of 4,217
Extra - increase of 4,141

Total Tech/TechPlus - decrease of 7,644

Total all classes - increase of 2,177

> As of February 23, 2008:
> Total all classes - 656,857

Therefore the change from Feb 22, 2007 to Feb 23, 2008 was 0.33% increase.

Here are the guesses that were on the list.
N8UZE: 1% less to 1% more -->   Average = 0% change   <--- "winner" of guessing game
N2EY: 1% more to 2% more -->   Average = 1.5% growth   <--- "3rd place" in guessing game
KH6HZ: 1% less to 0% change --> Average = 0.5% decline   <--- "2nd place" in guessing game
N3KIP: 2% more to 6% more -->   Average = 4.0% growth
KH6O: 6% more to 10% more --> Average = 8.0% growth
KK6J: 12% more to 14% more --> Average = 13.0% growth
KC2HMZ: 5% more -->   Average = 5% growth
K8BSG: 2% to 3% more -->   Average = 2.5% growth

Perhaps the next year will bring more growth or perhaps it won't.

Dee, N8UZE

What I think is important is that new Hams are coming on board to replace those that were lost after the big drop-off happened. That drop is very likely to have been caused by the so called "honeydo" Hams who became inactive with the ascendency of cell phones.

It will take a lot of new Hams testing to replace that dropoff. It looks like we are doing it, slow and steady. Just as it should be.

The focus of of this poll is to judge the impact of the elimination of element 1 on the numbers of Hams. Is it possible that given the other issue of drop offs, that it is very difficult to draw a reliable conclusion from it?

> Perhaps the next year will bring more growth or perhaps it won't.

Hard to disagree with that! 8^)

Hi Alan

It is so hard to determine. It is possible that no one cared, or that it just takes time for news to get out - Hams are not a noisy publicity seeking bunch.

Or it could be that New hams are coming along nicely. We are testing and granting licenses at a pretty good clip. I don't have the numbers handy, Anyone out there have them? We did have that big drop off of Hams who have since moved on to cell phones - those who used the first non element 1 tested group to use repeaters for local family comms, which is probably continuing, and it will take several years and a lot of new hams just to tread water.

I think we won't really know until around 7 to 10 years have passed.

Easy - just go to

http://www.hamdata.com/fccinfo.html

For example, in the last 365 days FCC has licensed 27,211 new amateurs.

> I think we won't really know until around 7 to 10 years have passed.

Complicated by the fact that the rules are rarely left alone for anywhere near that long.

Consider the past 25 years or so:

~1983: VE system created; question pools become public, license terms doubled to 10 years
1987: Old General/Tech Element 3 split into 3A and 3B, making it easier to get a Tech
~1990: Morse Code test waivers make any class license available with 5 wpm and a doctor's note.
1991: Technician loses its code test.
~1994:Vanity call program
2000: Restructuring reduces number of available-to-new-issue license classes from 6 to 3 and reduces both code and written testing for all classes
2006: HF 'phone bands widened, particularly 75 meters.
2007: Morse Code test eliminated.

On top of all that is the "anticipation effect". It takes FCC a long time to make up its mind, and that delay can have effects of its own. (If you were thinking of buying something and heard there would be a big sale next month, wouldn't you tend to put off the sale until then? Or if you heard the price was going to rise significantly, wouldn't you tend to buy right now?) The treaty requirement for Morse Code testing changed in July 2003 but it took FCC more than 3-1/2 years to get around to changing the rules. Could it be that there were some folks waiting for the change to take place?

And that isn't too bad. It also illustrates the extent of the falloff
that those 27K only makes for a small increase in the total. Just
something we have to live with for a few years.

That 10 year thing is the direct precursor to the present dropoff. Of
course it just delayed the start by 5 years 8^)

>

> .... Could it be that there were
> some folks waiting for the change to take place?

Absolutely! I know several myself, and as a VE, I expect to hear from
more in the future. I had hoped that once the requirement was dropped,
that they would not have waited so long to implement it.

Alan WA4SCA <ALANBIDDLE70@YAHOO.COM> wrote:

> So perhaps the code issue wasn't all that important, anyway.

Perhaps it is just ONE factor among many. Other factors may include:

* the almost complete lack of any reporting of this change to the world outside ham radio. I would like to see a poll that asks people what they know about this. My guess is that if you take one step outside of ham radio circles, you will find that no one knows anything about it.

* the aging (and death) of the ham population. The ten year license term means that, on average, it will be five years before a dead ham is dropped from the rolls, assuming that his heirs do not notify the FCC.

* We have no way of knowing whether a licensed ham is active, so there again, it will take years for inactive hams to be dropped from the license database, assuming that they take no action to renew their licenses.

In sum, I believe that the small change in licensing numbers does not rise to the level of statistical significance. Given the magnitude of the unknowable quantities described above, we probably cannot tell whether the population of live, active hams has grown or shrunken. Is there a statistician in the house? I would like to see an estimate of the margin of uncertainty of those numbers (plus or minus x percent), given the various unknown factors.

Klystron wrote:

> In sum, I believe that the small change in licensing numbers does not rise to the level of statistical significance. Given the magnitude of the unknowable quantities described above, we probably cannot tell whether the population of live, active hams has grown or shrunken. Is there a statistician in the house? I would like to see an estimate of the margin of uncertainty of those numbers (plus or minus x percent), given the various unknown factors.

I don't claim to be a statistician but it is an easy bet that there are sufficient variables to place the current result within the error of the measurement technique. This is especially true when you add that magic word "active" to your requirement.

The most reliable statistic is the number of new hams being licensed. Even for those, it's not possible to say if they're "active" (no matter what your definition might be for that term). But if 27,000 people invested the effort to obtain a license during the last year, at least we know that about 1 in 10,000 people cared enough to study for and pass the exam.

73, Steve KB9X

Since most of the "outside world" doesn't and didn't have a clue about the requirements to get a ham license, publicizing the elimination of the Morse code testing would have had little to no impact. The only way it might have helped was in letting people know that ham radio exists.

Try more like 6 years since there is a two year grace period after the expiration date that also needs to be factored in.

That assumes an even distribution of expiration dates. That's not necessarily a valid assumption, because events like changes in the vanity call rules have resulted in a lot of expiration dates being clustered in certain years, leaving other years rather lean.
>
> Try more like 6 years since there is a two year grace period

> expiration date that also needs to be factored in.

That depends on which numbers are used. The numbers posted at the beginning of this thread include only current, unexpired licenses, not those in the grace period. So the 5 year number is correct if we assume an even distribution of license expirations by year. The numbers on hamdata.com do include licenses that are expired-but-in-the-grace-period.

btw, in Part 97 FCC uses the term "expire" to mean the end of the 10 year license term, not the 2 year grace period.

I think that most people who are technically inclined to any reasonable degree have had some awareness of ham radio, at some point in their lives. Most were deterred from becoming involved in it by the need to jump through the hoop of learning a useless and obsolete "skill" (yes, I know, you probably don't see it as such) that they found repellent. Now that that hoop has been eliminated, the reason that they never became hams has been eliminated. Once that word gets around, I believe that many technophiles will slowly gravitate to ham radio (as I did).

Actually, that would bring it up to 7 years (5 year "expected value" on the random variable of 'term of license remaining at time of death' plus 2 years of grace).

Agreed. But new hams don't just come from the "technically inclined". In fact,
in many cases what first interested someone in technology was ham radio.

There's also the issue of "old/inaccurate information". I have come across people who
were knowledgeable about ham radio 30-40 years ago, but thought it had died out in
the 1970s or so. Or who thought that the equipment had to be large, expensive and
power-consuming. Others thought ham radio and cb were the same thing, or that cb had
replaced ham radio (!)

Whatever your view of the *test*, Morse Code is still in wide use in amateur radio.
Therefore, by definition, skill in its use is neither useless nor obsolete for hams.

> Now that that hoop has been eliminated, the reason that they
> never became hams has been eliminated. Once that word gets around, I

Of course more new hams would be a Good Thing. However, the relatively slow
growth of the past year, while welcome, means that either there aren't so many
people out there who were repelled by the test, or that they haven't yet found
out it's gone. Or both.

I will continue to post these numbers in an effort to document what's happening.

> > Try more like 6 years since there is a two year grace period after the

> plus 2 years of grace).

No, 6 years is the right number if the grace period is being
considered. Here's why:

If the license term is 10 years and the grace period is 2 years and
the likelihood of
a ham dying is the same for any given year, then the median value is
halfway through
that combined 12 year period. Which is 6 years.

IOW, all else being equal, half of the hams who die in the 12 year
license-term-plus-grace-period
interval will do so in the first 6 years, and half will do so in the
second 6 years.

If the grace period is not considered, the median value happens at 5
years.

Of course, that sort of tautology would still hold if there were an FCC regulation that all ham radio conversation must take place in Latin and all new hams must pass a test in Latin.

I disagree. All hams will get the full 2 year grace period AFTER they die (assuming that the FCC is not told of their deaths). It is a constant, not a variable. 'Term of license remaining at time of death' is the only variable. It has an expected value of 5 years. The full grace period is added to that by default.

Put another way, my assumption is that all hams will renew their licenses for as long as they live. Even if they die the day before the end of their final term, they will still get the full 2 year grace. For your model to hold, they would have to allow their final term of license to expire and then live on into the grace period.

It holds anyway. Nobody is saying you *must* use Morse, but that doesn't mean an appreciation of it is not of use.

Personally, I appreciate *all* modes of amateur radio, even though I don't use most of them. Conversely, I would expect anyone who doesn't use the modes that I use to appreciate that *I* like to use them.

That doesn't follow.

There isn't a regulation that radio amateurs must use Morse Code on
the air. Yet they do - by choice.
So having the skills to use it is neither useless nor obsolete.

There's a mistake in your reasoning, I think.

> Put another way, my assumption is that all hams will renew their
> licenses for as long as they live.

That's not valid assumption, though. The renewal window is 90 days
before expiration but two years after expiration. A considerable
number of hams renew in the grace period. How many? I do not know

> Even if they die the day before the
> end of their final term, they will still get the full 2 year grace.

Of course. But at the same time, they could renew on the last day of the grace period, too.

> For
> your model to hold, they would have to allow their final term of license
> to expire and then live on into the grace period.

Which does happen. Some hams just forget, others need time to figure out the new regs, etc. 90 days isn't that long of a time.

And some just lose interest, for a variety of reasons besides death. This isn't a new thing - read some ham's bios, and more than a few talk about how work, family, and other things crowded out ham radio for them at some point, they sold their equipment and let their license expire, and then came back years later. From the standpoint of license numbers, it doesn't matter if a ham dies or just lets the license expire, the same effect happens.

Actually, we need not consider the grace period at all, because we have sources of numbers for the current, nonexpired numbers of licenses.

It would be interesting for sure. Ham Radio is one of those niche activities that isn't geared toward the average person. And that really isn't all that bad a thing. Some people pick hobbies because a lot of other people are doing the same thing, Others pick ones like amateur astronomy or Ham radio because its what they enjoy.

At any rate, its all good, I think.

> * the aging (and death) of the ham population. The ten year license

Isn't it great that Ham radio can be still pursued by older folks? I know that that is a bit of a non sequitar, but the thought just crossed my mind. 8^)

> In sum, I believe that the small change in licensing numbers does not
> rise to the level of statistical significance.

In an overall sense, it is a little hard to come to a definitive idea of how many are active, and most analysis only gives us rough trends.

I am pleased that the FCC is issuing a goodly number of new licenses, and that at least the big dropoff is at least negated for the present. I personally am happy with only a small increase in numbers.

I think that production of stats on active Hams is very difficult, certainly it can't be gleaned from totals.

That would only be true if they knew what the requirements are. Very few were aware that Morse code was required. No one is deterred by a requirement that they don't even know exists.

Please define 'older folks.' That remark seems to me to be verging too close to that of a confrontational remark. :-(

The practice of operating a radio has never been any sort of test of athletic ability or that of stamina or physical strength only possible by those in the 20s and 30s age groups.

The 25th of February 2008 was the first anniversary of my passing my first amateur radio license test. That day was close to the 51st anniversary of my passing my first commercial radiotelephone operator's test at age 23. I was 74 on 25 Feb 07 and it was no more difficult nor easier a year ago than it was to pass a similar FCC test 52 years ago.

Since I've kept daily statistics pages from both www.arrl.org and www.hamdata.org, here's some items of information of the past year (25 February, 2007 to 2008) from Hamdata that isn't reported on the ARRL license stats page:

No Longer Licensed [Expired] : 26,127
NEW : 27,211 (positive offset by 1,084)

Class Changes : 32,021

License numbers, total of ALL amateur radio licenses -
2 July 2003 : 737,938
25 Feb 2008 : 722,588 (deficit of 15,350)

About the only thing one can infer from those is that there IS a small increase in newcomers versus expirees...but the total of all licenses is still short of what it was about 4 1/2 years ago. At the present rate of license totals increase, that deficit will not be offset for another 15 to 16 years.

The number of existing-license class changes has been larger for this past year than previous one-year periods. That seems to be the major outfall of the latest change in regulations for amateur radio licenses.

>>   In sum, I believe that the small change in licensing numbers does not
>> rise to the level of statistical significance.
>
>In an overall sense, it is a little hard to come to a definitive idea of
>how many are active, and most analysis only gives us rough trends.

The word ACTIVE has two meanings as used in this thread. The 'active' amateur radio licensees in the FCC use of the word refers to the license itself; i.e., whether it is valid for legal operation of a transmitter as required by a particular radio service. The word 'active' as many use it elsewhere refers to whether or not one USES a license for the purpose of transmitting (as required by law). There are no definitive statistics on USE insofar as an amateur radio license that I've seen.

>I think that production of stats on active Hams is very difficult,
>certainly it can't be gleaned from totals.

I disagree. One of the major uses of the first major computer systems was searching, sorting, and compiling totals of some programmed-in sorted-for subject. That was a selling point for the old IBM punched-card tabulator in electro-mechanical IT operations of the 1940s. Today it is greatly aided by the mass memories of 250 GB to 2 TB hard drives...which anyone can buy for reasonable cost off-the-shelf at places like Fry's Electronics. Sorting and searching programming methods have been well-known to IT programmers for half a century.

The FCC daily and weekly database files are all available to anyone with high-speed access capabilities. Each is so large in size that using a dial-up connection would require about a half day to download. ALL statistical website providers use the SAME database so none is more 'official' than others.
What the statistics providers DO with their data is up to them.

There isn't any sampling or 'plus or minus percentage' in regard to the FCC license class information in its database

files. It isn't a result of polling of any kind. It is data
direct from the only agency that grants amateur radio
licenses in the USA. Totals are what they are.

"Radio for its own sake" (which is what amateur radio is really all about) has never been a mainstream sort of thing. Just look at the number of licensed US hams compared to the US population at any time since licensing began.

> At any rate, its all good, I think.

Yep.

> Isn't it great that Ham radio can be still pursued by older folks?

It's great that people of all ages can be hams. Young, old, middleage, newcomers, oldtimers, etc.

> > In sum, I believe that the small change in licensing numbers
> > does not
> > rise to the level of statistical significance.

IMHO, what *is* statistically significant is that what was a slow decline has turned into a slow increase. What will be interesting is if it continues long-term.

> I think that production of stats on active Hams is very difficult,
> certainly it can't be gleaned from totals.

There's also the problem of what constitutes an "active" ham. Obviously someone who is dead or who never gets on the air or otherwise participates isn't "active".

But what about the ham who operates a few contests a year? Or the ham who does a lot of building and experimenting, but little operating (and whose operating is mostly to check out the latest project)? The ham whose activity is teaching classes, running VE sessions, Elmering (in person and online), writing, etc.? The ham whose focus is public service? Etc.

All sorts of activity - and it's all good!

The ARS numbers Feb 2008 thread got me to thinking, when the topic started shifting toward who knows about what relating to Ham radio.

I think it is pretty fair to say that the ARS will never be a mainstream hobby or avocation. I really don't think that that is even a good idea, after some thought.

For myself, I am a inveterate tinkerer, and love to build things. My license allows me to legally access some pretty high powered stuff and work on the same. My path to the fold was in looking at ways to apply amateur radio to my other hobby, Amateur astronomy. Funny though, the Ham radio took over, and is now my main hobby, I never did apply it to astronmomy.

What attracted you, and can we get some ideas from that to attract or identify and attract new blood?

It's much like other hobbies -- there are people who enjoy collecting stamps or snapping pictures, but these aren't "mainstream" either. There will always be competition for peoples' spare time, and ham radio is one of the things that people can enjoy in their spare time.

> What attracted you, and can we get some ideas from that to attract or
> identify and attract new blood?

I would certainly like to see some of those ideas.

I think my path into ham radio was fairly typical for the 60's -- I got interested in radio and electronics, had a friend who had similar interests, and ham radio was a good fit. Not only did it provide a way to learn about electronics but it got me introduced to many people who I would never have met otherwise.

I suspect that my analog in the current generation pursues a similar interest via their computer. There's an interesting correlation between meeting people at the club meeting and on the air, versus meeting them via the Yahoo Group, the chat room, or via online game playing.

My path back into ham radio was via the public-service aspect. When I retired and moved to a place where I could participate in the hobby, I got back on the air and tried several aspects of the hobby -- NTS, contests, DX, general ragchewing. None of them really caught my fancy, for various reasons. Then I ended up in Mississippi in the Katrina effort and that activity did capture my interest. Since then my ham-radio activity has been primarily related to public service and emergency communication.

I'm not suggesting that this is the only way to recruit people into the

hobby or that it's the only segment of the hobby that's worth anything.
  It's MY primary interest, and if other folks enjoy DX or contests or whatever, that's wonderful. Different people enjoy different things, which is one of the great things about ham radio -- it's many different hobbies, all rolled up into one. The difficulty is selling this to the general public.

You missed my point. The figures for new licenses and expired licenses are, no doubt, perfectly accurate. However, those quantities may be eclipsed by two other variables that we cannot quantify:

1) The number of hams who have died but have not yet been dropped from the rolls because the FCC does not know that they are dead

2) The number of hams who have stopped turning on their radios

> identify and attract new blood?

>From as far back as I can remember, I was interested in technology - how things worked and what they could do. The kind of kid who's always asking questions, taking things apart and putting them together, etc. I found electricity particularly interesting.

This interest was aided and abetted by reading everything I could get my hands on. Libraries and bookstores were special places to me.

I did the usual Erector-set and battery/flashlight bulb stuff at a very young age. Then at about age 10 I found a book called "All About Radio and Television" which explained the basics of radio and how to build a simple radio using a razor-blade-and-pencil-graphite detector. I built one, strung a wire out to the crabapple tree in the back yard, and heard WPEN. I was hooked.

The book also mentioned various kinds of radio besides broadcast radio and TV. Of greatest interest to me was something called "amateur radio", where ordinary people of all ages and all walks of life had their own radio stations that they used to communicate with each other over great distances. Also of interest was "shortwave broadcasting" which came from other countries.

Nobody in my family was a ham, nor were any of my neighbors. None of them knew any hams, either. Not much detail on amateur radio was given in "All About Radio and Television", but I knew where to look for more info - other books. Soon I had a much clearer picture of what amateur radio and shortwave radio were all about. First order of business was to get a receiver in order to listen to "hams" and shortwave stations, so I built one based on information in the various books. It was a simple two-tube regenerative set, made mostly from salvaged parts. It wasn't the best receiver in the world but it worked well enough for me to hear BBC, Radio Moscow, the Voice of America - and "hams"! I wanted to talk to those folks!

The books explained that being a ham required earning an FCC license, so I set about doing that. I learned Morse Code by listening to hams use it on the air, and theory from the books and by building and improving the receiver. By the time I was 12 I figured I knew enough to pass the Novice test, so I set out to find a local ham who would be a volunteer examiner for me. I located one by the antenna in his yard, and he referred me to another amateur who did the tests. I passed on the first go and built a simple transmitter while waiting for the license to arrive from FCC. Which it did on October 14, 1967.

I went on the air and began making contacts. It wasn't easy with the equipment I had and my basic skills, so I learned to be a better operator and how to build better equipment.

Now it's more than 40 years later and it's as much fun to me as ever.

What attracted me was the idea of building my own radio station and using it to communicate with like-minded folks all over the world. That the results were random and unpredictable only added to the attraction. I didn't think radio was "magic" or "mysterious", just a lot of fun.

A big factor in the attraction was the attitude expressed in the books. None of them said learning radio, getting a license or building equipment was difficult. None said a ham had to be older than a certain age, have a certain income, education or IQ level, be of a certain gender or ethnicity, etc. The required math, physics, chemistry and electricity, and Morse code, weren't presented as obstacles; just stuff that anybody could learn. The whole process was and is a lot of fun. A challenge, not a "hoop" or a "barrier".

None touted amateur radio as a replacement for other communication methods or as a social community, though they did mention the public-service aspect. Sure, there was no internet back then in the 1960s, no iPods, cell phones or video games, etc. But we had radio and TV, long distance telephones, music, movies, etc. Amateur radio wasn't a replacement for those things, it was fun in itself.

IMHO the way to "sell" amateur radio isn't to present it as a replacement for something else, but as a unique activity with many facets. Some will get it, others won't, no big deal.

Our Section Manager came up with a great idea. We have a very successful youth group in the far reaches of the state. There are, of course, a number of other amateur radio youth groups around the state, having varying levels of success.

In April, we are going to gather kids from all these groups together, ply them with pop and pizza, a have them tell us what it was that attracted them, and what we could do better. What better way to figure out how to attract new hams than by asking the new hams themselves, and especially the young ones who we need, and who are likely to be more open than their older counterparts.

By the way, that successful group out in the boonies has started another chapter in the state, and yet another in a neighboring state. They're doing something the kids lke.

That pretty much answers your question, Len. Lots of people who don't "get around very well" can still have a blast. And fortunately there are usually other Hams who can help with the more physical things like putting up antennas, climbing towers, and the like.

Pretty much my take on it too.

Perhaps I should have been more clear. It is hard to determine if a Ham is active or not by just being licensed. An active license is not necessarily a sign of an active ham. Even trying to define "active" is difficult.

In that instance, I was referring to Klystron's "active".

Let me clarify one point: I never suggested that Morse code was an obstacle because it was too hard. I have known any number of people who were put off by Morse, myself included, because it was archaic and unrelated to electronics. I have worked in the electronics field and I have met any number of people who knew a substantial amount about electronics in general, as well as ham radio, but were not hams. They often mentioned Morse when asked why that was.

If you can look at it objectively (I realize that it is an emotionally charged subject), you cannot make a plausible claim that there is anything inherent to radio or electronics about Morse. Morse is a linguistic construct, like a semaphore flag code, that was devised in order to enable communications using a device that was incapable of transmitting voice. It is as if prospective hams were told that before they could be allowed to handle electronic gear, RF emissions and high voltages, they first had to learn how the ancient Egyptians wrote with hieroglyphics. Then, they would have to write a page of hieroglyphics themselves and then read a page that someone else had written. If you think that that is absurd and that hieroglyphics have nothing to do with radio and that you would not be willing to waste your time on such a pointless and irrelevant digression, then you understand the frustration of electronics enthusiasts with the old system and with those who embraced it.

As far as the difficulty is concerned, I went from SWL to Amateur Extra in 9 weeks (3 separate test sessions, 3 weeks of studying per test). After leaving the material for about a month, I resumed studying and obtained a General Radiotelephone Operators License with a Radar Endorsement in about another month. I felt that the entirety of the material, on all six tests, amounted to the equivalent of about a semester of General Chemistry.

Same here.

>Nobody in my family was a ham, nor were any of my neighbors. None of

I had an uncle living some distance away, who sent me an old ARRL Handbook that I loved to flip through, more looking at the pictures than reading the text, thinking how neat it was to be able to build stuff like that. Also there was long ago a radio section in Popular Mechanics with construction articles. And the days when just about every family had a radio receiver that would get shortwave as well as broadcast band.

>What attracted me was the idea of building my own radio station and
>using it to communicate with like-minded folks all over the world.
>That the results were random and unpredictable only added to the

>lot of fun.

I guess I was that way too - it's only fairly recently that I have come to realize it is almost magic that you put a few watts of RF into an antenna, and the energy is radiated out into space, and induces a tiny signal in every conductor it passes, and if that conductor is an antenna then the tiny signal is enough to amplify and detect and use for communication.

I know another thing that pushed me along was RTTY - I had always been fascinated by Teletype machines, and when I learned that hams could have them and use them to communicate I was really excited. Without that extra push I might have delayed getting a ham license, or maybe just continued as an electronics experimenter and SWL.

I remember my first crystal set. It worked not very well, and my kid's
mind thought "maybe if I put a battery in the circuit it might work
better." Lot's of crackles and noises in the earphone, and pretty little
sparks at the pencil/razor blade interface. Still didn't work, but I was
still hooked.

That battery reaction should have held a clue why it didn't work in the
first place. But hey, I was a dum liddle kid! ;^)

My first exposure to amateur radio came from a Boy Scout merit badge
cook in which the scout would learn Morse code. I didn't get that badge,
I stumbled over... well you know. Set mo off on the road to perfidy, hehe.

> Nobody in my family was a ham, nor were any of my neighbors. None of

I was taking a lot of household appliances apart, and not being real
clever about putting them back together. This caused quite a problem
until my Grandfather decided to send me a "care package about every two
months that had old radios and other electronic junk that he salvaged
from where he worked. Joy!

Sounds good to me.

That's fine, people have all sorts of reasons for not being hams.

However, Morse Code is *not* archaic, and *is* related to amateur radio, because hams do use it extensively - today, right now.

> If you can look at it objectively (I realize that it is an

That's one reason for it. But even after voice radio was invented, Morse code use in radio continued, because it has certain advantages over other modes.

Sorry, that's not a convincing analogy, because nobody uses Egyptian hieroglyphics in amateur radio - and they never did. But Morse Code was and is used in amateur radio. That's a big difference. Knowing Egyptian hieroglyphics doesn't help one with amateur radio operation, but knowing Morse Code sure does!

IMHO a better analogy is this: Suppose that all drivers had to
demonstrate the
ability to drive a car (in first gear, at 5 mph) with a manual
transmission in order
to get a driver's license, even if they only intended to drive
automatic-transmission
cars (which far outnumber manual-transmission cars today).

> If you

See above. Morse Code has a lot to do with amateur radio. Whether that
means it should have its own special must-pass-to-get-a-license test
is
a completely different matter. And it's been settled by FCC.

I went from Novice in 1967 to Technician and Advanced in 1968, then to
Extra in 1970.
In those days there was a 2 year experience-as-a-General-or-Advanced
requirement to
even try the Extra exam. I never thought the exams were very difficult
if someone knew
a bit about the subject.

I'm not ashamed to admit it, I came into the hobby from CB. Some friends had formed a CB club back in the early 80's just when CB became legal here in the UK (sadly using different frequencies and FM rather than AM as in the US) but we soon realised its limitations and when a few of them became licensed I was quick to join them.

Just celebrated my 25th anniversary, licensed on 21 February 1983 :-)

Not quite, :-), I was replying to Mike Coslo. :-)

The delay of 'knowing who died' in regards to RADIO AMATEUR
licensees is only two years...the grace period. After that
and no renewal, the license expires. LICENSE expiration is
a known as far as the FCC database is concerned.

Since amateur radio is a HOBBY, not a profession, there's NO
requirement that anyone 'report in' on someone's condition.
Some become disenchanted with the activity and just quit or
have too many other activities to continue or might be laid
up with some kind of illness. It was never a requirement to
continue being an amateur radio licensee forever once granted
a license...no more so than being interested in radio long

ago was a mandate to get an amateur radio license. :-)

In my opinion, the granted license totals - even if holding steady despite general population increases - serves as an indicator in the USA that the amateur radio service will continue among all the other radio services here for the near future.

So, the licensee totals have dropped 2% in about 4 1/2 years since mid-2003. The last year has seen a 0.15% increase in totals, a rather insignificant gain, but a gain nonetheless.

Many years ago at a small microwave company, all of us were curious at the absence of one technician who just didn't show up for work. The small company, busy at keeping afloat, didn't investigate until two months had passed. Turned out the guy just got tired of what he was doing and 'quit' without notifying anyone. Later, at a larger corporation, we noticed that one engineer didn't show up for two weeks. Corporate personnel department was notified he'd been killed in an automobile accident, his family too involved with that tragedy to notify his employer. There's many reasons why someone stops doing what they were doing besides such extremes.

73, Len AF6AY

I don't think my path will be very useful to use as a tool. My second husband dragged me to a class with the comment "Let's do this together".

Actually if a person died the day they received their license, it could be
12 years before it showed up not two if no one bothers to report it.

You managed to get that sentence approved by the moderators?!? :-)

>My path to the fold was in looking at ways to apply
>amateur radio to my other hobby, Amateur astronomy. Funny though, the
>Ham radio took over, and is now my main hobby, I never did apply it to
>astronmomy.

Back in the 1960s, my lead man at Electro-Optical Systems was both a technician class licensee and a very hands-on telescope maker. He had ground his own 6" mirror for the telescope he was using and was slowly grinding a 10" for a bigger scope. I came up with a design and breadboarded a crystal-controlled time base for a sideral drive for the ten-incher. Done with now-obsolete RTL from Fairchild, it would be a snap to do it today with a single Microchip IC plus a small stepper-motor or synchronous motor driver circuit. Doug moved to Hawaii to work on the BIG telescopes there so the ten-incher project (and its final drive) were put on hold.

BTW, he had been into amateur radio first, then converted to doing amateur astronomy. Folkses mileage differs. :-)

>What attracted you, and can we get some ideas from that to attract or
>identify and attract new blood?

Do we HAVE to 'attract new blood?' Serious question.

I've already told my personal story. It seems to rankle some old-timers because it is non-standard to the 'common' experience of USA radio amateurs...so I won't repeat it. <shrug> After starting in the electronics industry 54 years back, doing high-power HF communications transmitting, the elimination of the morse code test allowed me to get a license (told that story, too, but it is also non-standard). In talking to the applicants a year ago and several others locally in the past year, their interest in getting a license vary considerably. But, nearly all of them go the Technician class route for local radio contacts, a sort of social order thing possible in a large urban area. It was like the CB radio craze and then the BBSs that preceded the Internet era. Few of those got involved via the supposed paradigm of 30 to 50 years back that lots of old-timers repeat. In this newer world of the Internet and many, many components available for lots of different electronics things, plus ten kinds of consumer electronic products (at relatively low cost) on the marketplace, the old concept of 'having one's own personal radio station' is diminishing rapidly.

As I see it, the old reasons-for-being of amateur radio aren't applicable anymore. Technology in electronics has long since leaped ahead of any state-of-the-art advances done by amateurs long ago. What I see are two areas -

1. The just-plain-for-fun boosting, for whatever purpose in communications, whether in a local urban area or a bit farther out...and an emphasis on trying out things on a personal-enjoyment level. We are NOT required to DO certain things in the hobby just because some old-timers say we MUST do those besides the regulations that all must obey.

2. De-emphasizing the 'necessity-to-be-a-part-of-the-community-as-a-service.' Now, I know that amateur radio CAN help in emergencies and all that 'service-to-community' PR can persuade some lawmakers to this 'amateur cause' but it seems to me to have gotten too big a share of the open political statements in periodicals. Those who really care about community service can just as easily go DIRECT to such

existing organizations. With a total licensee database showing 720+ thousand licensees today, that should be large enough to show lawmakers that amateur radio has a large following.

I'm no expert on PR or marketing, don't have the explicit solution to get more newcomers. As I observe the hobby, it will last at least a couple of decades. That's good enough for me. USA amateur radio stands or falls by what its publicists say and try to convince new members...seldom by what the old-timers claim. Times have changed (many times over in my lifetime) and all must adapt to that, not to hold onto ancient paradigms that no longer apply.

Dee is correct. Some hams may die with 10 years left on their licenses. For others, 9 years may remain. For still others, 8 years may remain (and so on). For the mathematically inclined, the "expected value" equals the sum of [i as i goes from 0 days to 3652 days] divided by 3652 days (the number of days in 10 years, including 2 leap years). The result will be in days, so divide by 365 to get years (the answer is 5 years). Add a 2 year grace period and the AVERAGE ham will remain on the rolls for seven years after his death.

When you consider the age demographics of ham radio, standard actuarial tables may lead you to conclude that we are probably in the middle of a large die off. My guess is that the number of dead hams still on the books is far greater then the thousand or so net gain that comes from simply subtracting expired licenses from new license grants.

Then there is the matter of hams who no longer turn on their radios,
whose number is unknowable.

> In April, we are going to gather kids from all these groups together, ply them with pop and pizza, a have them tell us what it was that attracted them, and what we could do better. What better way to figure out how to attract new hams than by asking the new hams themselves, and especially the young ones who we need, and who are likely to be more open than their older counterparts.

Your group has hit on the correct way to attract the young folks - by getting a number of them together.

If a young person comes into Ham radio all by themselves, it isn't as interesting for them, and they can't do as many things easily as if they were older. Its been my experience that young people (tweens and early teenagers) can get a little lost at club meetings and activities like Field day. And these days, there should be an approved adult to chaperone them at events who has been cleared by one of the state police background investigations.

But if you can get a fair number of young'uns who can relate to each other well, they can become good hams and a future resource.

>
> Do we HAVE to 'attract new blood?' Serious question.

We do need new people to replace those who leave for one reason or the other. I want someone to talk to on the other end, and don't want the Amateur radio community to become closed and eventually die out.

<more snippage>

> As I see it, the old reasons-for-being of amateur radio aren't applicable anymore. Technology in electronics has long since leaped ahead of any state-of-the-art advances done by amateurs long ago. What I see are two areas -
>
> 1. The just-plain-for-fun boosting, for whatever purpose in communications, whether in a local urban area or a bit farther out...and an emphasis on trying out things on a personal-enjoyment level. We are NOT required to DO certain things in the hobby just because some old-timers say we MUST do those besides the regulations that all must obey.

I'm fortunate that I never had that experience. Of course, if someone ever did tell me how I was supposed to use my time in the hobby, I think I would politely decline, and go do what I wanted to do. 8^)

> 2. De-emphasizing the 'necessity-to-be-a-part-of-the-community-as-a-service.' Now, I know that amateur radio CAN help in emergencies and all that 'service-to-community' PR can persuade some lawmakers to this 'amateur cause' but it seems to me to have gotten too big a share of the open political statements in periodicals.

Here we agree. While I am impressed with what Amateurs have done in emergencies, the way that the public service genre of the hobby has morphed is a little troublesome to me. I don't know if you were watching the group a few weeks ago, but I related a story about an emergency comm person speaking at a club meeting. When a member noted that the ARS frequencies were there for use after the normal comms weren't working, he replied " Every thing we do is a matter of life and death, so we can use your frequencies any way we wish".

That was not only wrong, but scary that people that think in that manner are coming into the hobby with such an attitude. He (and some like him) come in to talk to the people who will be building and maintaining repeaters and infrastructure, and lay one like that on them?

As N3LI wrote, that would be sad!

However, when it showed up in the totals is a matter of which totals you use.

If you use numbers that include the entire FCC database, such as hamdata.com, you get both unexpired, current licenses and expired-but-in-the-grace-period licenses, and it takes 12 years before an unreported death shows up.

But if you use numbers that include only the unexpired, current licenses, such as ARRL and AH0A, it takes 10 years before an unreported death shows up.

Note that the terms "expire" and "expiration" refer to the end of the 10 year license term, and do not include the grace period. That's not my definition, it's FCC's definition. Hamdata.com uses the term "no longer hams" to indicate licenses which have reached the end of the grace period without being renewed.

Of course in real life there are several factors which complicate the issue and make simple conjectures inaccurate:

1) An unknown number of deaths *are* reported to FCC by family members. Often this is done so the SK's callsign can be transferred to another amateur in the family, or a club.

2) An unknown number of amateurs renew in the grace period.

3) Not all licenses which expire are the result of death. It is not unknown for a licensed amateur to lose interest and let the license not only expire but run past the end of the grace period. Years later, the ex-ham's interest is revitalized and s/he gets a new license. This was probably more common in the days of 5 year licenses but one still encounters recent "retread" hams today.

I agree, but I haven't found the secret for getting them together. How does one publicize this first gathering? I have not found the term "ham radio" to be effective in attracting young folks.

How about some more detail from the original poster of this scheme in

terms of how they got it off the ground, and how they manage to keep it
going?

Thanks and 73,
Steve KB9X

Well, I wasn't the guy who got the original group going. However, my (vague) understanding is that the DAR Girls and Boys Club (I hadn't even known there was such a thing) was the original resource. Whether the DAR approached someone looking for an activity for these kids, or whether some interested ham was already a member, I don't know. Somehow they hit upon the idea of HF Contesting, and formed the "Young Amateurs Contest Ham Team" (YACHT). This, for whatever reason, took off. Apparently these kids enjoy contesting. As far as I know, the amateurs involved weren't big contesters, so this must have been the kids' idea.

On reflection, contesting seems a pretty good idea. Kids are often reluctant to have conversations with older hams on the air. A contest is an easy way to get a lot of contacts without the risk of being asked hard questions.

Locally we did have the 4H approach us looking for something of interest to the boys in 4H, since most of the activities seemed more oriented towards girls. As it turned out, we didn't attract many boys; a few girls but a bunch of parents! So that didn't work out for us. We still put together a little booth at the 4H annual pancake supper, but that really hasn't been terribly productive. One local activity that does seem to be working out is a school club. A couple of amateurs go to one of the middle schools once a week for a meeting of their radio club. This has gotten us a handful of new hams. Not huge numbers compared to the population, but every little bit helps.

Someone mentioned having mentors for the kids background cheked, and in this day and age, there is something to be said for this. Most RACES organizations now require background checks, so your RACES organization might be a source for mentors for these kids that have already been vetted.

Although I have a technical background, my post secondary "eddycaytion" is actually in the art field, and In my job and life I cross between the two.

I stumbled upon this site, and was pleasantly introduced to "Steampunks"

(Hang with me here, this is actually on topic-despite what it sounds like so far)

These folks take a whimsical view of modern life, and like to take modern throwaway technology and modify it to turn it into something that you wouldn't throw away. Typically they alter items to look as if they were built in the late 1800's, toward the end of Victorian times (hence the word "Steam" as a retro power source. Hand crafting is mandatory.

Now to the Ham radio apps.

In a unique (and a little bizarre) melding of technologies, one practitioner has built and implemented a Telegraph sounder that reads RSS feeds.

http://steampunkworkshop.com/telegraph.shtml

I was hooked.

Although the Amateur radio world does not have many examples of art - though some folks come pretty close with some old time stations, I found the method I'm going to use for my next shack redo. I'll have to share the pictures of the same. Now to start scrounging brass....

Certainly some will find this odd, but I like a little aesthetics in my hobbies along with the technical.

Keep in mind that the background checks for working with children are looking for different issues.

When I was prez of an association and coaching youth Ice Hockey, I often had to explain that we weren't looking for violations of basic law, that no one was going to be rejected because they had an underage drinking offense or the like. No one is perfect. The only thing that would trigger the thing was violations involving children.

The RACES checks might be a bit different, but I'm not sure. I'm almost certain the Red Cross' ones are.

RACES background checks are, of course, dependent on your local emergency manager. Most, however, a looking for pretty much the same things. In the

event of an emergency you might be deployed at a shelter or other location
where there might be vulnerable individuals. That is the same sort of thing
I would suspect one would want to know if someone were to be around
children.

But it is a good caution. Different jurisdictions can be amazingly uneven.
I know of one jurisdiction where a deputy interviews the candidate's spouse.
The concern is that the volunteer work might interfere with the home life.
So clearly, YMMV.

[snip]

Mike,

If you have an email address for Mr. von Slatt, please send it to me: his description of the sounder he built says that it draws 3.5 amps at 12 volts, which sounds very high compared to the sounders I'm familiar with.

FWIW: there is a lot of information available about using sounders and connecting them, via phone lines, computers, and direct wire. Civil War reenactors and other telegraph buffs sometimes use a "Dial-up Morse" set, which allows for "compatible" operation between two key/sounder pairs over regular dial-up modems. The circuit can be easily modified (as mine has been) to hook up to a computer for sounder practice.

Those interested will find lots of good information at http://www.w1tp.com/ and linked sites.

73,

Bill, W1AC

That seems a tad premature to me. At present there are 722K TOTAL
licensees and the expiration rate is roughly 27K/year. If that
keeps up without any newcomers, it would be 26.7 years before all
were gone. [of course there will be newcomers...but how many
depends on the attitude of the old-timers they come in contact with]

>> ... We are NOT required to DO certain

>ever did tell me how I was supposed to use my time in the hobby, I think
>I would politely decline, and go do what I wanted to do. 8^)

Well, from my experience (at work or at play) I've had some
who INSISTED on telling me what I 'should' be doing. Some
of those got rather antagonistic about it. "We don't DO that
kind of thing in <fill-in-the-blank>" kind of comment. It was
so prevalent among amateur radio licensees that I encountered
that it turned me off of bothering to get a license for a long
time. That's been my experience over the last half century and
I spent that time working IN the electronics industry.

I'll have to say that the above attitude was reflected in the
older amateur-radio-interest newsgroups and was partly due to
the creation of rec.radio.amateur.moderated.

>... I don't know if you were watching
>the group a few weeks ago, but I related a story about an emergency comm
>person speaking at a club meeting.

I was 'reading the mail' but didn't bother with it much. :-)

>When a member noted that the ARS
>frequencies were there for use after the normal comms weren't working,
>he replied " Every thing we do is a matter of life and death, so we can
>use your frequencies any way we wish".
>
>That was not only wrong, but scary that people that think in that manner
>are coming into the hobby with such an attitude.

That person was more right than wrong. If one bothers to look, the small-number Parts of Title 47 C.F.R. state clearly that ANYONE can use ANY radio frequency to call for assistance if a situation is really life or death...licensed or not. True.

Phil Kane could probably quote the Part and wording off the top of his head but, not being an attorney, I would have to search the Parts (all freely accessible). Besides, someone in here would want to start a whole steamy argument thread on that, arguing minutiae on the whichness of the what...:-) Memory says it is the Part on commercial radio licenses but undoubtedly someone in here will say 'I am wrong.' [sigh]

Radio amateur licensees are not bound JUST to what Part 97 says. The whole of Title 47 applies, even if 99+% has nothing directly to do with the amateur radio service. But, with REAL life-and-death situations, anyone can use any frequency at any time with or without any license.

>He (and some like him)
>come in to talk to the people who will be building and maintaining
>repeaters and infrastructure, and lay one like that on them?

Let's take that IN context. Consider that the attending radio amateurs might ALSO have an 'attitude' going. Consider that lots of government infrastructure radio facilities are kept going 24/7 expressly FOR the purpose of life-and-death comms needs. Amateur radio repeaters aren't. Amateur repeaters are there primarily for the benefit of other amateurs.

I don't know about your local group, but I've seen (in real life as well as in print) some groups that are simply too full of themselves with self-righteousness. Such folks have a terrible attitude and couldn't negotiate anything unless it was in their favor. Anyone coming in contact with them would tend to reply in-kind.

Now, in my area, I'm GLAD that the commercial, professional radio services ARE there for anyone's benefit 24/7. LAPD and LAFD are up and running as are the neighboring incorporated cities of Burbank and Glendale (with nice cooperative ties between all the government facilities). The Greater Los Angeles Emergency Communications Center is staffed and ready to go into action any time there is a REAL emergency and they can tie into dozens of utility companies and other firms for unusual emergency situations. It was put to the test on 17 Jan 94 with the Northridge earthquake and passed. Since then it was improved via the LAFD Emergency Communications Service which donated old, unused buildings and bought or converted busses and radio equipment. I took my amateur tests at an 'Old Firehouse' that is now part of that LAFD sub-organization. Nice civic cooperation by the LAFD.

I experienced that Northridge earthquake first-hand and helped
a utility company restore services. All the electric power of
an area populated by 10 million or so were WITHOUT electric
power for half a day. Didn't see ANY sign of 'amateur radio
emergency' groups until two days AFTER the 17th. FEMA flew in
RF-plus-video terminals and put them in service the day after.
I'd like to say something positive about amateur radio since
I am a licensee in the radio service, but there wasn't much
evidence of it. I've been a commercial radio licensee for 52
years and can't forget that...I have to give credit where it is
due from REAL experiences, not some nebulous 'future plans' or
PR write-ups that appear only within amateur radio interest
groups.

Kudos to those working to bring new folks, young and old, to ham radio.

Some observations from a ham who started out in ham radio at the age of 13 (in no particular order):

1) Don't just go for high schoolers. Middle-school and even elementary schoolers can be hams if they're interested enough.

3) Don't try to sell amateur radio as a substitute for cell phones, the internet, or other communications methods. Sell it as a unique activity with its own unique attractions and rewards.

4) Scouting has a long history of connection to amateur radio. Some councils have pretty serious amateur radio programs, and always need more help.

5) Don't assume what parts of amateur radio young people will or won't be interested in. Emphasize the wide variety of activities hams do, and how much choice there is.

6) Don't assume that younger hams only want to associate with other younger hams.

For me, part of the attraction to amateur radio was the opportunity to be part of a community where one's age, gender, income, etc. are not a factor. Morse Code operation made this possible - on the air with that mode, nobody knows how old you are. You can interact with other hams of all ages. You're judged by your skills and signal quality, not how much you spent on your rig, etc.

73 de Jim, N2EY

Michael Coslo <m...@psu.edu> wrote on Thu, 28 Feb 2008 12:23:05 EST:

>Although I have a technical background, my post secondary "eddycaytion" is actually in the art field, and In my job and life I cross between the two.

So is mine...as an illustrator (an artist who draws/paints things as they really are).   I went for engineering after my Army service.

>I stumbled upon this site, and was pleasantly introduced to "Steampunks"

I admire the heck out of the excellence of that website and its gorgeous photos. Really well-done craftsmanship on web page design. However, it begins to look a lot like 'eye candy' for those who love to do things the old-fashioned way.

>In a unique (and a little bizarre) melding of technologies, one practitioner has built and implemented a Telegraph sounder that reads RSS feeds.

NO WAY can that sounder 'copy' digital data from any Internet.

Sorry, but there's just TOO MUCH MASS in that sounder to move anything that fast...not even at 60 WPM speeds of old Teletypes. Those who get all upset about my absolute statements should open up and study any OLD Model 15 to 19 TTY from Teletype. That Chicago firm KNEW how to make machinery work fast and long.

>Although the Amateur radio world does not have many examples of art -

Our 'art training' must have come from very different schools.

I would consider the Hallicrafters SX-28 to be of very aesthetic appeal to many. Never owned one, just used one a few times. As a 'communications' receiver it worked fine technically. It both sounded great (with big speakers) and had a cool look to it.

As to transceivers, I would consider the Collins KWM-2 to be of finer aesthetic value from the looks and proportions and general useability of its outside. Never had one of those but I've used one and tested several older ones. Neat and compact (for tubes) it also had a 'with it' cool look with nicely-matched colors with sleek proportions (even if the front was a bit off symmetry).

Some time ago I found a website that showed the evolution of the Hallicrafters S-38 external appearance. Final versions of that model were redesigned by a professional design firm. Technically, that one was just a glorified All-American 5 with added 'SW' bands and thus had (actual, by comparison with its contemporaries) lots of deficiencies. Mythos of so much shared use among old-timers made it some kind of icon. <shrug>

>though some folks come pretty close with some old time stations, I found
>the method I'm going to use for my next shack redo. I'll have to share
>the pictures of the same. Now to start scrounging brass....

Try not to forget that brass will oxidize from exposure to air. Stock up on Glass Wax too, it works well on a continuing need to make brass shiny again. And again. And again.

PLATE the brass with something to avoid all that dog-work shine-up that you will need. Find a good electrochemical shop and make some deals there. It will save appearances a lot longer than all that necessary polishing later.

>Certainly some will find this odd, but I like a little aesthetics in my
>hobbies along with the technical.

So do I. Our difference is that I do an innate merging of technical functionality with outward design and color. Icom 'basic black' (with white accents and sparse color in legends) does it for me...who also is on intimate acquaintence what the functions are. The fine-grain, DISTINCT black on white screen appearance does the final choosing for me. Sorry, but orange and gray or green and gray displays of other makers don't sit well with my taste. One is always looking at the front panel of a receiver even if we don't 'see' it.

A SOUNDER for amateur RADIO use? The ubiquitous BFO is what I consider the first 'DSP' for morse cognition. That's why it became so popular in radios way back before my time on earth. Okay, so von Statt doesn't know much about electromagnets and didn't put finer wire with more turns on his replica.

If we get too retro on 1890s 'aesthetics,' perhaps he could make a lovely, shiny, brassy Tuning Fork as a frequency standard? Musicians still use those. An HC-6 holder of a quartz crystal can never look aesthetic by itself. But it will be a thousand or more times more accurate in frequency than an all-mechanical vibrating Tuning Fork. But, what the Fork? A Tuning Fork can LOOK so interesting...and it can make a noise! :-)

Amateur Radio Newsline(tm) Report 1594 - February 29, 2008

Amateur Radio Newsline report number 1594 with a release date of Friday, February 29th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. An Australian digital ham radio group is shutting down, the March Clipperton Island DXpedition is going live to the web and Japan launches its own emergency communications satellite.   Find out more about it on Amateur Radio Newsline(tm) report number 1594 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO TECHNOLOGY: VK PACKET GROUP SHUTTING DOWN

The cost of keeping a radio program going has become to much for one Australian crew. After many years of service, Australia's Queensland Digital Group is closing down and transferring its ham radio networks to that nations Wireless Institute Civil Emergency Service better known by the acronym WICEN. With the story behind the story here's W-I-A newsman Graham Kemp, VK4BB:

--

Brisbane Area WICEN is set to take over the Queensland Digital Group packet and Voice networks as the QDG Inc. can no longer maintain the networks and will run out of funds within twelve months.

In order to keep the radio sites for Amateur use QDG reluctantly decided to close down, this way they are able to pass on the networks as a going concern, complete with some funds for maintenance and on going technical support. A number of QDG Inc. members have joined WICEN to help maintain the equipment.

This decision has taken over three years while they have tried other means to keep the networks going but this is the only logical choice left. The QDG's VK4DGQ packet mail-server will also close, due to the decline in packet usage.

The Queensland Digital Group has started the slow process of shutting down feeds to Queensland and interstate packet BBS. Invisible to users, VK4DGQ has none the less been an integral part of the world wide packet radio network for twenty years and will be missed by many hams.

For the Amateur Radio Newsline, I'm Graham Kemp, VK4BB of the WIA News in Brisbane, Australia.

--

VK4BB also reports that as the era comes to a close, so to does the VK4TX packet radio Bulletin Board Server run by Neville Mills and bearing his callsign. First on line in 1982 the well known Australian B-B-S was soon attracting packet users in the Brisbane region and was very popular in the 1980's and 1990's. Over the last few years it has as a packet forwarding gateway. (WIA News)

**

RESCUE RADIO TECHNOLOGY: JAPAN LAUNCHES EMERGENCY COMMUNICATIONS DATA SATELLITE

Japan has successfully orbited an experimental satellite aimed at providing high-speed emergency Internet access across Asia. This, even if the terrestrial infrastructure were to be destroyed.

The Kizuna satellite was launched at 08:55 GMT on February 23rd from the Japan Space Center on Tanegashima island using a Japan developed H-2A rocket. The 342 million dollar bird will allow super-high speed data communications of up to 1.2 Gbps. That rate translates to 150 times that of the average high-speed ADSL connection rate of 8 Mbps, or 12 times the speed of a fiber-optic communication delivery to an Internet subscribers premises.

Japan is looking to use the satellite to allow communication when a ground-based network is severed by a disaster in any Asian country. It would be used to transmit data to crisis management offices by satellite transceiver equipped first response teams in the field. The space agency is also hoping to use the satellite as an educational or medical communications tool to reach people in remote or mountainous areas.

The word Kizuna means "bond" in Japanese. The satellite is expected to be commissioned to full service with terrestrial infrastructures this coming July. (Space)

**

ON THE AIR: CLIPPERTON 08 GOING LIVE TO THE WEB

It's a DXpedition that you will be able to take part in, at least vicariously. This with news that the upcoming TX5C DXpedition expects to be active from Clipperton Island March 7th to March 17th has arranged to bring much of its operation into your shack over the World Wide Web.

Thanks to the generous sponsorship of satellite phone dealer Outfitter Satellite Inc, the TX5C operation will be able to provide DX'ers with rich high bandwidth content from the DXpedition including more online log updates, webcams and live video from Clipperton Atoll.

Bob Grimmick, N6OX, will lead the international team to Clipperton. The major sponsors include Icom America, SteppIR antennas, Alpha Radio Products, the Northern California DX Foundation, and the International DX Association. Operation will be on all the high frequency bands using C-W, SSB and RTTY plus 6 meter CW and SSB.

This happens to be the 30th anniversary of the 1978 FO0XA-XH operation from the atoll and the goal in 2008 is to hold 100,000 or QSO's worldwide.

More is on-line at http://clipperton2008.org. We will have more DX news later on in this weeks Amateur Radio Newsline report. (Clipperton 2008)

**

DX DISASTER: BAD WEATHER FORCES XR7W EARLY SHUTDON

Being at the center of a DX pile up not only involves a lot of hard work, but it can also be dangerous and expensive. That's the story of the now concluded Wager Island operation. Amateur Radio Newsline's Bruce Tennent, K6PZW, has more:

--

On February 9th, the XR7W Wager Island team experienced some truly horrible weather conditions. They were forced to leave the island after some 24 hours of gale force winds and pouring rain.

Abandoning their DXpedition was bad enough, but once on the mainland the team suffered a rather serious accident.

They were on their way back to Coyhaique, Chile when their van slipped of a gravel road. It hit a rock and flipped upside-down. Four operators were hospitalized. RV1CC was diagnosed with a broken left upper arm. CE6TBN received cuts, bruises and a broken rib. RA0FU had a number of cuts while HA1AG suffered a broken finger, a broken rib and compression on the thorax bone. Thankfully none of the operators lost their life.

Despite all the problems, the XR7W operators managed some 2,400 QSO's from the rare Wager Island location. The damage in van, to their equipment and additional costs are estimated in excess of 11,000 Euros.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles

--

Wager Island is off the coast of Chile. You can read an in depth first hand account of the accident written by HA1AG on line at http://dx-is.com/news/?p=197 (Southgate, HA1AG, others)

**

DX NOW: KOSOVO AND DXCC

The DXCC status of the newly independent nation of Kosovo remains in question. In a lengthy press release last week, the ARRL's DXCC Manager Bill Moore, NC1L, said he understands that there are many questions about the DXCC status of Kosovo, but indicated that a decision on adding it to the approved countries list could be sometime off .

Moore said the DXCC rules, modified in 2000 to better handle inclusion to DXCC, are clear on how additions can be made. He says that for inclusion in the DXCC List, certain conditions must be met. He says that gaining entry on the DXCC List is not contingent upon whether operation has occurred or will occur, but only upon the qualifications of the Entity"

Kosovo declared its independence from Serbia on February 17th. This set off new speculation on what this means to Amateur Radio and specifically, to the DXCC program. According to Moore, adding Kosovo to the DXCC List would be considered under the "Political Entity" DXCC guidelines. These DXCC rules state that Political Entities are those areas which are separated by reason of government or political division. When Kosovo might

be put up for such consideration, Moore did not say. We will have more DX

news near the end of this weeks newscast. (ARRL)

RESCUE RADIO: HAMS TRAIN FOR SKYWARN IN TERRE HAUTE INDIANA

Back in the USA, amateur radio operators and others in Terre Haute, Indiana

took time out on Monday night, February 25th to learn how to identify dangerous storms. This, at a class where trainee storm spotters got a lesson in spotting potentially severe weather formations.

Dave Tucek, KC9CNF, is a meteorologist with the National Weather Service in Indianapolis. He spoke to more than 60 amateur radio operators and other weather spotters gathered for the 2008 Weather Spotter Class sponsored by Illiana Indiana Skywarn. He says that storm spotters are vital in identifying dangerous storms at the ground level. He said that weather radar often only tells the National Weather Service what is happening several thousand feet above the ground but not what's going on down here at ground level. Weather spotters, such as those in Illiana Skywarn, are vital for issuing correct severe weather warnings, watches and advisories, Tucek said.

Skywarn, a national organization that works with the National Weather Service to help identify severe weather at the ground level. (Terre Haute Star)

**

ENFORCEMENT: DEATH CANCELS PIRATE STATION FINE

The FCC has canceled a $10,000 fine against the late Henry Gaye for operating an unlicensed radio transmitter. This, because Gaye has passed on.

The text from the FCC was short and to the point. Dennis Carlton, regional director of the South Central Region of the Enforcement Bureau, wrote: "The Tampa Office has since learned that Mr. Gaye passed away. Because Mr. Gaye is no longer living, we cancel the NAL." (RW)

**

ENFORCEMENT: U.K. RAID NETS 20 PIRATES OFF THE AIR

Ofcom, the United Kingdoms telecommunications regulator has announced that it recently carried out enforcement action against over 20 illegal broadcasters in various parts of London. The operation was carried out between February 6th and 16th in cooperation with the Boroughs of Hackney, Haringey, Tower Hamlets and Islington, and the Metropolitan Police.. This enforcement action resulted in three arrests, one studio raid, and the removal of 22 transmitters from the airwaves. Ofcom estimates that there are still over 150 illegal stations operating in the UK, with half of those broadcasting across London and the South East. (GB2RS)

**

RADIO LAW: FOR THE BIRDS

FCC Commissioner Michael Copps says that he is pleased with a decision by a federal appeals court to vacate the commission's denial and dismissal of the Gulf Coast migratory bird petition. Instead, the court ordered the commission to conduct a study of the effect of communications towers on migratory birds.

The commission has an open proceeding on the issue of whether communications towers, such as radio, TV, cell and two-way towers, cause or contribute to migratory bird deaths. Environmentalists say they do; broadcasters say they do not or that the problem is overstated.

The FCC has not decided whether to appeal the decision but Copps called the decision a wake-up cal. He ays that it is time to stop acting as if a problem will go away if we just keep kicking it down the road. (RW)

**

REPEATER PROBLEMS: UK D-STAR REPEATER GOES OFF DUE TO INTERFERENCE FROM UNLICENSED DEVICES

A newly operational D-Star repeater in the United Kingdom has been forced off the air due to interference on its input from unlicensed devices. The Radio Society of Great Britain's Emerging Technology Co-ordination Committee website reports that the GB7YD dash C, 70cm D-Star system has been removed from service until an alternative frequency can be found.

According to the coordinating committee, problems have been experienced at other United Kingdom 70 cm D-Star repeaters with an input on 433.9125 MHz. Unfortunately this part of the Amateur Band in the U-K was made license exempt and is used by a large number of micro power consumer electronic devices for remote control and telemetry applications. This includes automobile key keyless entry systems, wireless door bells and data links for in-home weather stations. (Southgate)

**

HAM TECHNOLOGY: D-STAR GROWING IN THE UK

But its not all bad news from our neighbors across the Atlantic pond. 2 meter D-Star repeaters have been springing up like weeds across the United Kingdom in recent days. First was GB7DG in Glasgow on February 15th. It was soon followed on the air by GB7YD in Yorkshire, GM7MI in Manchester and GB7DE in Fife.

United Kingdom D-Star repeaters have already become well established in the 70 cm band. The new 2 meter repeaters make D-Star accessible to many more U-K Radio Amateurs. The offer by Icom UK of 2 meter or 70 cm D-STAR repeaters for �1000 which is equivalent to about 1900 U-S dollars has undoubtedly been a factor in the rapid growth of the United Kingdom's D-Star repeater network. So even with the interference from unlicensed devices, D-Star in the United Kingdom is still quickly gaining in popularity. (Southgate)

**

HAM HELP WANTED: PSR LOOKING FOR WRITERS AND ARTICLES

The Tucson Amateur Packet Radio publication Packet Status Register is looking for a few good writers. Of particular interest are ham radio operators working on the digital side of our hobby who would like to publicize their activities.

Since 1982 Tucson Amateur Packet Radio publishes the Packet Status Register quarterly as a membership journal featuring both technical and non-technical articles. Its editorial staff can handle just about any text and graphic format. The deadline for the next issue to be released at the 2008 Dayton Hamvention is March 31st. Submissions go to WA1LOU at tapr dot org. (TAPR)

**

HAM RADIO BUSINESS: HARBACH PURCHASES RIGHTS TO PETER W DAHL TRANSFORMERS

The name Peter W. Dahl and the transformers and chokes he designed will live on. This with word that Jeff Weinberg, W8CQ of Harbach Electronics, has purchased the rights to the name, along with the original transformer and choke specifications and designs, and the design equipment.

Weinberg e-mailed at least one ham to confirm that the deal had been made. In his note he indicated that the next generation of Dahl designed transformers will be built by MagCap Engineering using the original specifications, and sold through Harbach Electronics under the Peter Dahl name. The transformer and chokes will be shipped FOB Canton, Massachusetts

and shipped directly to the customer from the MagCap Engineering factory. (QRZ.com)

**

THE SOCIAL SCENE UPDATE: MT BEACON HAMFEST IN NY IN APRIL

Turning to the ham radio social scene, word that the 2008 Mt. Beacon Amateur Radio Club Hamfest takes place on Sunday April 13th not April 1st

as reported last week. The venue is still the same. It's Tymor Park in LaGrangeville, New York. More is on-line at www.wr2abb.org. (WA2BSS)

**

THE SOCIAL SCENE: KENNEHOOCHEE HAMFEST MARCH 15TH

The 55th Annual Kennehoochee Hamfest, takes place Saturday, March 15th in Jim R Miller Park, on Marietta, Georgia. Gates open at 8 a.m. and close at

3 in the afternoon local time with talk-in on the 146.880 MHz repeater that

requires a 100 hertz access tone. More about this event is on-line at www.w4bi.org (E-mail)

**

THE SOCIAL SCENE: DX PROGRAMS FOR YOUR CLUB MEETINGS

And if you are looking for a program for your next club meeting word that movie maker Jim Brooks, 9V1YC has two new DXpedition videos out. One deals

with the 2006 Kermedec Island Zed-L-8-R operation. The other chronicles the 2007 B-S-7-H Scarborough Reef operation. Both are professionally produced, broadcast-quality documentaries on DVD. More about these and Jim's other 8 DXpedition films are on line at www.dxvideos.com. (E-mail)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States

of America, We are the Amateur Radio Newsline with links to the world from

our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: BOB BEASLEY, K6BJH - S.K.

Some more sad news to report . This, with the passing of famed ham radio cartoonist Bob Beasley, K6BJH, of Homeland, California.

Bob Beasley was born and raised in southern California and became a radio amateur in 1953. He once said that he had been interested in comic art ever since he could remember, and decided at an early age that he wanted to

be a cartoonist.

For many years K6BJH was the resident cartoonist for Worldradio Magazine. After he retired much of his work was released in the book The Best of Beasley.

Bob Beasley, K6BJH, died on Saturday, February 16th. He was 83. (Worldradio)

**

CHANGING OF THE GUARD: SWL LEADER DON RICHARD SCHMIDT - SK

And the world of shortwave listening has lost one of its prominent leaders. This with the passing of Southern California Area DX'ers club Vice President Don Richard Schmidt.

According to Stewart MacKenzie, Schmidt died of an apparent heart Attack on

Monday, February 18th. McKenzie says that the group will greatly miss Schmidt's services to the hobby of radio listening and to the two club's that he has put his full energy into all these years.

MacKenzie says that per Schmidt's wishes there are no plans for a memorial

gathering. (SCADS)

**

EMERGING TECHNOLOGY: BOEING MUST PROVE WIRELESS BROADBAND SECURITY OF 787

Boeing Aircraft Company still has something to prove when it comes to offering safe Internet access on its new 787 jetliner. This, before the

new jet will be permitted to carry passengers with their wireless devices

turned on.

Boeing has designed the 787 Dreamliner to allow airlines to offer passengers more in-flight Internet options than previous planes have allowed. Those new features and other aspects of 787's computer network go beyond the scope of existing regulations. So the Federal Aviation Administration is requiring Boeing to show the new technology isn't a safety threat.

According to news reports, Boeing will have to show that Internet access in the cabin will not leave the flight controls vulnerable to hackers and hijackers. The company claims it has engineered safeguards to shut out unauthorized users, but some security analysts worry navigation and communications systems could still be vulnerable.

As to you bringing along your H-T and operating from on-high. Well don't hold your breath. Its doubtful that any major airline will ever permit hams to talk on the air with their own gear as some might please. (Science OnLine)

**

HAM RADIO IN SPACE: AO-11 COPIED BUT INTERMITTANT

AMSAT reports that its aging OSCAR-11 ham radio satellite was heard from January 22nd to February 1st and again from February 11th to the 15th. Signal levels have been very variable in strength sometimes very strong, and at other time undetectable, even at high elevations. Low signal strength was particularly noticeable towards the end of the transmission periods.

OSCAR-11 is expected to switch back on under control of its on-board timer around March 7th. There should be a short period of transmissions before permanent eclipses start in mid March. After that time it is unlikely that the satellite will support any sustained period of operation, and will only transmit for a short time, possibly less than a single orbit, every 21 days.

OSCAR-11 has a beacon frequency of 145.826 MHz where it transmits telemetry. More information is at http://www.users.zetnet.co.uk/clivew/   (ANS)

**

WORLDBEAT - ANTARCTICA: LOGS FINALLY ARRIVE

Some good news for those of you waiting a long time for a confirmation from Antarctica. Adam Brown, K2ARB, reports that he has received the logs for the operation from KC4USV at McMurdo Station for the period October 2004 through February 2007. Among the operators during that period were Mike Poole, KE6ZYK, and Charles Dowdell, N2TYQ. All stations wishing to confirm a QSO or submit an SWL signal report are invited to do so via K1IED at his address as found on QRZ.com. All QSO's will soon be uploaded to

Logbook to the World as well. (Modern DX News)

**

WORLDBEAT - AUSTRALIA: A NEW HAM ON-LINE WIKI

A new amateur radio wiki has been started by Tim Roberts, VK4YEH. Roberts

says that he intends for this new wiki to become an online encyclopaedia for hams, rather than just pages of links. Articles of all sorts are welcome, but be aware that the philosophy of a wiki is that articles can be, and probably will be, edited by others. The URL is www.amateur-radio-wiki.net (WIA)

**

WORLDBEAT - WORLDWIDE: INTERNATIONAL MUSEUMS WEEKEND

This years International Museums Weekend special event will take place on the weekend of June 14th and 15th. Hams world-wide are encouraged to participate in this event by setting up stations in their local museums.

The event organizer is Harry Bloomfield, M1BYT. He asks that all those intending to join in should register their museum on the International Museums Weekend website at www.ukradioamateur.co.uk/imw Harry himself can

be contacted by email to harry dot m1byt at tiscali do co dot uk. (GB2RS)

**

DX

In DX, word that F8CHM will be active as FR5EZ from Reunion Island until the 21st of March. He expects to be active on the HF bands and 6 meters using CW and SSB. QSL as directed on the air

And weather permitting, the United Kingdom's Luton VHF Group plan to activate the Welsh island of Caldey, on 1st and 2nd March. This, during the 2 meter and 70cm RSGB contest. The callsign will be GW3SVJ. The expedition is a precursor to a much longer and larger expedition planned for the first week of September. Further information is available at www dot vhfcomm dot co dot uk slash LVG.

Also the 1st and 2nd of March sees the ARRL DX SSB Contest on all HF bands.

It starts at 00.01 on the Saturday and ends at 23.59 on the Sunday. The exchange is RST and serial number. As this is a contest contacts must be kept brief so please do not ask QSL routing. Most major operations will

either post this information on the Internet or supply it to DX and contest

newsletter.

The VP6DX operation was slated to leave the island on February 28th. As this was being written, the VP6DX Web site was reporting around 121,968 QSO's. The U-R-L is www.vp6dx.com

Lastly, word that the New Zealand's NZART QSL Bureau ZL1 prefix sub-bureau

is closed until further notice. Jack Small, ZL1KQ, has retired from the position he has held since 1980. The national society is now looking for

a replacement for Small willing to take on this unpaid volunteer position.

(Above from various DX news sources)

**

THAT FINAL ITEM: UK MAN STEALS TO BUY RADIOS

And finally this week, talk about being addicted to radio. Amateur Radio Newsline's Jim Damron, N8TMW, reports:

--

The Halifax Evening Courier reports that a 56-year-old man in the United Kingdom admitted to stealing the equivalent of almost $30,000 from his 71 year old partner and spending it all on receivers.

The newspaper says that the Copley, Halifax man was accused of forging his

partners signature on checks made out to himself while she was a resident in a nursing home. He reportedly used the money to purchase radios with which he surrounded himself often had them all on at once.

Police found about 50 wireless sets in his house. The defense said he had suffered from an obsessive compulsive disorder for 30 years.

--

The next time your XYL gives you a bad time over your transceiver and antenna tuner, just tell her about this guy and how lucky she really is. (Halifax EC)

>
> Phil Kane could probably quote the Part and wording off the top of his head but, not being an attorney, I would have to search the Parts (all freely accessible). Besides, someone in here would want to start a whole steamy argument thread on that, arguing minutiae on the whichness of the what...:-) Memory says it is the Part on commercial radio licenses but undoubtedly someone in here will say 'I am wrong.' [sigh]

It is not as simple as that. What constitutes an emergency? If an ambulance crew is transporting a 90 year old heart attack victim, it is certainly a matter of life or death for that one patient. However, if the ambulance breaks down, they can't commandeer your car. For a government agency to seize private property (a category that includes repeaters, transceivers, etc.) for their own use, they must have a declaration of emergency, declaration of martial law, or, in individual cases, a court order. The fire department employee who claimed that the FD could take over an amateur radio club's repeaters anytime that they wanted to do so was dead wrong.

It is an aesthetic. The Steampunk aesthetic is coupling the throwaway ideals of modern times, with the hand crafted "preciousness" of another time. It is quite purposeful anachronism, and a large part of its charm is that it isn't nihilistic, but it has a whimsical base to it. The projects they work on are specifically on new or present technology. Modifying Ipods, LCD panels, Fender Strats. It isn't even nostalgic, much of the banter appears tongue in cheek.

>> In a unique (and a little bizarre) melding of technologies, one

> That Chicago firm KNEW how to make machinery work fast and long.

I do not know the exact mass of the the sounder arm, but the device does not have to sound out at the RSS feed speed if it is too fast for the mechanics. The software driving it can send out the Morse at a comfortable speed.

>> Although the Amateur radio world does not have many examples of art -

It is an aesthetic that is difficult for some to grasp, for sure, but the brass is a big part of it. If future polishing is to be delayed, there are coatings that can be added. Sometimes the weatherd look is even desired in itself.

<snip>

Sure, that is very nice. But it is also a style of the moment. 50 years from now it will be old stuff, just as the Victorian aesthetic is for us now.

> A SOUNDER for amateur RADIO use? The ubiquitous BFO is what I

I don't recall a sounder for amateur radio use. The whole project was just a fun thing to do with an rss feed, not a vindication of something. Strictly speaking, it wasn't Victorian technology, it was from an even earlier time. The guy was just having a little retro fun.

> If we get too retro on 1890s 'aesthetics,' perhaps he could

> Fork? A Tuning Fork can LOOK so interesting...and it can
> make a noise! :-)

The tuning fork was invented in 1711. They are usually made of steel. Most steampunks would not make a tuning fork. The idea is to take some modern technology and make it look as if it was manufactured in another time and place. So while a person might take an Ipod and etch an old fashioned picture in it, or a guitar and modify it, they wouldn't likely make an instrument like a tuning fork.

But to return to topic, The concept of making a station conform to an aesthetic is not all that unusual. Our stations can be an expression of ourselves, and we can either place the items on the desk and be done with it, or we can embellish the room as we see fit. It is just another way to have some fun.

Well said, Mike!

I'm a member of the function-determines-form school of thought on this. That sounder is an excellent example of that school - its form is exactly what it needs to be to do the job it was intended to do. Yet it is aesthetically pleasing without any added ornamentation.

I've tried to follow that aesthetic in my amateur radio activities. My homebrew rig (google my call for the website) is built almost entirely out of reused parts. Rather than trying to hide this, I decided to celebrate it in the design. The shack furniture, while made mostly from new wood, is designed to be as strong and functional as possible while being constructed using simple woodworking tools and keeping the cost as low as possible. The result is a shack that is comfortable and functional, yet inexpensive and flexible for changes. When I worked the CW SS this year, I was able to incorporate a logging computer setup (homebrew-from-reused-components computer, too) in a short time, because of the flexibility of the shelving system.

--

Part of the attraction to some of the products of certain eras is that they were made of quality materials, and were intended to last a very long time. I've tried to follow that rule in my homebrew designs as well, and the result has been a very low parts failure rate. (I also have a large stock of spare parts so that if something does fail, it can be easily and quickly replaced).

--

Perhaps we hams are missing out on something by using words like "shack", "shop", and "hobby". People who do art for its own sake, without pecuniary interest, do not use those terms. Be it painting in oil or watercolor, sculpture (in a variety of media), woodworking, music, poetry, performing arts, etc., they use terms like "studio", "gallery", "performance space", etc. There's a certain approach the creative and performing artist have towards what they do, and I think we could learn from it. We should not be apologetic for our activities any more than an artist apologizes for his/hers. In amateur radio we can be both creative (building equipment and stations) and performing (operating our stations) artists!

There's also the factor of craftsmanship, which is evident in the steampunk objects. Craftsmanship can't be bought or learned entirely from a book; it's a matter of practice, too. Steampunk clearly has lots of it!

I think we hams may have been selling ourselves short in some ways. We have aesthetics that IMHO are just as valid as any other. For example, antennas are not "ugly" in that aesthetic - they are a beautiful expression of form-following-function if done right. To me, a house does not become "home" unless there is a properly-designed-and-installed amateur radio antenna present.

"Imminent danger of loss of life, serious injury, or damage/loss of property". Or verbiage something like that.

> If an
> ambulance crew is transporting a 90 year old heart attack victim, it is
> certainly a matter of life or death for that one patient.

Agreed. But what if they are transporting several people - say, a young family that was in a serious auto accident? Or suppose they were transporting desperately-needed medicines, blood, etc., during an epidemic?

> However, if
> the ambulance breaks down, they can't commandeer your car. For a
> government agency to seize private property (a category that includes

> declaration of emergency, declaration of martial law, or, in individual
> cases, a court order.

I'm not sure what the ultimate legality is, in a case like that or the others I described. I suspect that government folks would not seize private property for emergency use unless they were desperate, because of the possible liability.

OTOH, would you want to have it on your conscience that a person or a family died because you wouldn't let the ambulance folks use your car when it was desperately needed?

> The fire department employee who claimed that the
> FD could take over an amateur radio club's repeaters anytime that they
> wanted to do so was dead wrong.

I don't think the FD person wanted the repeaters. He said they could use the frequencies, not the repeaters. And the frequencies are public property, after all. An amateur or club might own the repeater but they don't own the frequencies.

Further complicating the situation is the fact that many if not most amateur radio repeaters aren't installed on the owner's property. For example, one of the repeaters I use is on top of a local hospital, where its antenna shares rooftop space with antennas for other radio services. (It's an excellent location and gives very good coverage). It's connected to the hospital's backup power system, too. The repeater club pays a nominal fee for the electric power and rent. Given that level of community support, don't the repeater owners have some responsibility to the community?

Like the situation of the broken-down ambulance, would any radio amateur want it on his/her conscience that a building burned down, and/or people died, because s/he wouldn't let the emergency service people use an amateur radio repeater in an emergency when it was desperately needed?

Well actually AF6AY, and Mike are reading more into those passages of
Title 47 than they were, and are, intended, by the Commission. Phil,
being an ex FCC Lawyer can expound on the intent, but when I was a
Resident Field Agent, it was understood within the Commission, that
Amateurs, operating within their Licenses, are NOT restricted to
Frequencies, modes, or just about any other restriction, of operation,
during Safety of Life situations, that are authorized by the PART 97,
but this does NOT Allow them to use Frequencies NOT Authorized under
than Part.
The same is true for Licensees operating under other Parts like 90, 87,
and 80, where that Specific Language is used in the Part. The fact of
the matter is, that you only get in trouble, IF someone complains, or
has a problem with your operation, and is willing to go on the Record
with their objection with your operation, and Force an investigation, of
the incident. Sometimes Common Sense does prevail, but sometimes it
turns into a very BIG Deal.
Case in Point, a few years back, there was an incident in California,
where a young fellow used his Mod'ed HT to beak into the Local Sheriff's

Frequency to report an injured Hiker. The Sheriff took offense to that intrusion, and there was a GIANT BrewHAHA, that as I recall, Phil was involved in. We had quite a discussion about the situation, between ourselves about the incident, and again, as I recall the issue was settled out of HQ by some of the BIG GUN Lawyers back there.

It has to be life and death, and keep in mind that Law enforcement is happy to make that determination after the fact - and has in some cases. The thing that had people concerned in this case was the "anything" message.

<some snippage>

One of the issues that has come up in the post Katrina world is that a number of public service agencies have had their employees get Ham radio licenses. All well and good, and probably an end run around getting hobbyists to help, since the employee hams will already be on the job.

Problem is, the new hams in many cases are just looking for another communication channel, and are not interested in radio as radio. Even this is okay. But.. The problem that arises is that there is an expectation the people who are interested in the hobby and its technical issues are going to keep everything up and running.

Even then, many of us with that ability are willing to pitch in.

But the big question is who becomes liable if that repeater fails? I think that in many ways, Ham radio emergency operations are tending to become employees who also have a ham license. And their interests are more in the line of what they do best - save lives, not put up repeaters.

<N2EY@aol.com> wrote:

>I don't think the FD person wanted the repeaters. He said they could use the frequencies, not the repeaters. And the frequencies are public property, after all. An amateur or club might own the repeater but they don't own the frequencies.

I think there's a significant difference between a one-time emergency use (if regular comms go down), and regular use of the frequencies as a substitute for a properly-licensed/managed public service radio allocation.

As I understand it, this issue came up in a big way some decades ago, after World War II. During the war, normal amateur-radio communications were all shut down (for security reasons). The whole RACES system was set up to allow specially-licensed stations (part of civil-defense organizations) to use the ham-radio frequencies for communication.

Some years after that (after ham-radio communications were allowed again) some controversy arose over the use of the ham frequencies. >From what I've heard, there were some public-safety organizations in small towns (police and fire) which started using the ham frequencies regularly... they got ham licenses and set themselves up as RACES stations and tried to justify their full-time tactical use of the ham band under the "RACES training and drill" rules.

Hams complained. The FCC agreed with the complaints, deciding that this was not an appropriate use of the ham frequencies, and instituted new rules which strictly limit the frequency and duration of RACES training drills that any given RACES organization can undertake (basically, the equivalent of two long weekends per year). These rules still exist today, and I imagine that many of us here had to answer at least one question about this on one of our ham exams :-)

The Rules in 47 CFR 97.113 specifically forbid "Communications, on a regular basis, which could reasonably be furnished alternatively through other radio services" as well as communications for hire or in which the operator has a pecuniary interest. I think that the first of these prohibitions would probably be ruled to apply to a fire department which (as a matter of course or regular practice) makes use of the ham band or repeaters. The FCC would (I believe) certainly rule that there are other bands and radio services which are specifically intended for public-safety use, and that these are reasonably available to fire departments and etc.

Real, short-term emergency use, when a regular fire-department or other radio service fails for some reason, is a different matter... but this isn't a "regular basis" of communications.

Agreed. The discussion in question was about use of amateur
frequencies in an emergency situation only.

> As I understand it, this issue came up in a big way some decades

During WW2, the system was called WERS (Wartime Emergency Radio
Service). WERS used the prewar
112 and 224 MHz bands (2-1/2 and 1-1/4 meters) for local
communications. Post-war, WERS evolved into RACES.

Sounds plausible. The difference in cost of amateur gear (which could
be converted surplus or even homebrew) vs. commercial land-mobile VHF
equipment was probably one reason for it.

And the need for a declared emergency to activate RACES.

Good points!

There are fringe elements in all aspects of life, including ham radio. I've seen hams get much too caught up in the particular aspect of the hobby that they enjoy, be it emergency communications, DX, contesting, whatever.

Someone went to a club meeting and got carried away with what he was saying about emergency communications. This has evolved into a discussion about what constitutes an emergency, what hams can do during this emergency, and the possible ramifications of all that. It has been an interesting discussion, from which I have learned something.

But let's not assume that the statements of one individual represent the guiding principles of an entire segment of ham radio. Yes, there is a fringe element in the emergency communications interest group, but the same is true for the contest interest group, the DX interest group, and even the segment of the hobby who only wants to ragchew. You're not going to find a mainstream emcomm guy who will say "everything we do is a matter of life and death."

While this has been an interesting discussion, we need to realize that it applies to a minuscule part of our operating. If there are a thousand people reading this newsgroup, it's likely that not a single one of you will ever be involved with a real life-or-death emergency. If you are, Part 97 is likely to be the last thing on your mind, which is exactly as it should be.

Still, an interesting discussion. I hope I never have to administer CPR, but I still got the training.

73, Steve KB9X

If you want to COMMANDEER something, re-read my previous post. It doesn't matter if there are 99 people in the ambulance, they are all having heart attacks and the ambulance is on fire.

> > However, if

Look for definitions of terms like "declaration of emergency," "martial law" or "disaster area." This is heavily traveled territory - we don't need to reinvent the wheel, here in this newsgroup.

> OTOH, would you want to have it on your conscience that a person or a
> family died because you wouldn't let the ambulance folks use your car

There is a bit of difference between a civic minded amateur radio club voluntarily making its facilities available and a government employee with an inflated sense of entitlement believing that he can seize whatever he wants to seize whenever he want to seize it because fires and sick people in ambulances are really, really important.

You're just several pieces of brass and leather away from steampunkin' it, Jim! The knobs and meters are already there. maybe brass up the chassis (technical question: will the brass have an untoward effect on inductors, ala diddle sticks?)

The speaker (red cone is a plus) can be covered with leather real or faux. The shelves look a lot like the ones I made. Tubes glow, so they

are already there......

Interesting insight Jim. When I built my telescopes, each one was designed to be functional, yet beautiful. I was especially fond of the 12.5 inch reflector, which was done in art deco style. The form followed the function, yet the aesthetic enhanced the form. On the urging of some friends I entered it in the home made telescope contest, and it won.

They love to create. I'm hoping to bring some of that to amateur radio. I also expect a certain amount of ridicule.

I think that many people have been told that antennas are ugly, and that some industries are happy to promote that. Most antennas are not

ugly

==> ARRL, FCC, DEPARTMENT OF DEFENSE REVIEW NEW DEVELOPMENTS IN PAVE PAWS INTERFERENCE MITIGATION

The FCC, ARRL representatives and agents of the various US Air Force units working on developing a plan to mitigate alleged interference from 70 cm ham radio repeaters to PAVE PAWS radar systems on both coasts met February 20 via conference call. The purpose of the conference was to review the status of the mitigation plans at both sites: the Massachusetts Military Reservation on Cape Cod and Beale AFB, north of Sacramento, California.

Thanks to the cooperation and assistance of the involved repeater owners on Cape Cod, ARRL Regulatory Branch Manager Dan Henderson, N1ND, said, "I am pleased to be able to pass along that at this time, the Department of Defense has determined that the levels of harmful interference to the PAVE PAWS radar site on Cape Cod have been sufficiently reduced. As part of this determination, they are not rescheduling additional follow-up testing for that area until sometime in 2009."

Henderson said that this decision doesn't mean New England is back to pre-mitigation repeater operation: "Any mitigation steps that have been taken should remain in place. A repeater that has gone off the air should not be simply turned back on at its original power level -- its previously determined mitigation standard still applies in order to protect the primary user from harmful interference."

Henderson stressed that the entire process is ongoing. "The high degree of voluntary cooperation shown by the owners of Air Force-identified repeaters has helped demonstrate to the DoD that the amateur community takes its responsibility seriously. This should help us retain access to the band in the long run."

During the discussion of the Cape Cod radar during the teleconference, the ARRL broached the topic of allowing the resumption of coordinating new repeaters on the 70 cm band in New England. The Air Force has agreed in principle to allow the New England Spectrum Management Council (NESMC) to resume coordination efforts under certain conditions. "These include that in addition to NESMC's normal coordination policies, Longley-Rice signal strength plots are prepared to determine expected signal strength at the radar site," Henderson said.

Henderson said that the ARRL has a "fairly good understanding of what strength level at the site should be workable, even though the DoD has not given us specific information on the sensitivity of the radar. The Longley-Rice plots should indicate if the operating parameters of the proposed repeater might be sufficient to prevent harmful interference to the radar site. The Longley-Rice plots are not the 'last word' in the process, but are a good tool giving the repeater owner and NESMC a reasonable assessment of possible problems."

Henderson reiterated that "any specific mitigation number from the Air Force is an exact measurement, not a 'predicted' number from a computer analysis."

Once NESMC approves a tentative coordination, Henderson explained that NESMC would forward the complete information on the new repeater to the Air Force for authorization on a case-by-case basis, as provided for in Title 47 �2.106 Footnote US7. "During a 60 day trial period, the Air Force would contact

NESMC for an immediate shut-down of a new repeater causing harmful interference. If that happens the new repeater would have to remain off the air until it can be successfully mitigated."

While this new process is a bit burdensome to NESMC and the repeater owners, it goes a long way toward keeping Amateur Radio in a position where 70 cm operation can grow with careful attention to the effect of our operations on the primary users.

During the update discussion of the Beale AFB PAVE PAWS site in California, the DoD was able to report that there was a reduction in harmful interference at the radar, though work remains to be done to bring the situation at that site to a successful conclusion. DoD officials announced that a new round of testing is scheduled during the spring at Beale, and that they will share the results after the next round of testing is complete.

During the teleconference, the FCC reported that it has received excellent compliance in the wake of their phone calls and letters to repeater trustees and owners. This cooperation has made it unnecessary for the FCC to issue any mandatory shut down orders to date. The Commission will continue to be the initial point of contact with the DoD should further mitigation be required based on additional testing at Beale.

The ARRL will continue to work with the FCC, DoD, repeater coordinating groups and individual repeater owners as requested. "Because of the sheer number of 70 cm repeaters in that area, the Beale problem is taking longer to resolve," Henderson said. "We will continue to work toward a successful, constructive conclusion for as long as it takes."

==> TENNESSEE AGENCY CALLS ARMY MARS INTO ACTION

The Tennessee Emergency Management Agency (TEMA) called Army Military Affiliate Radio System (MARS) into action as tornados swept across the Southeastern United States February 5-6. According to Army MARS Chief Stuart Carter, "For the first time as far back as we can remember, a state government called for MARS deployment in response to an actual emergency. The resulting teamwork and use of Army MARS Winlink capability gave TEMA its only e-mail link during President Bush's visit to the storm-stricken area." At least 70 messages were sent during the state operation ranging from casualty figure updates and signal reports to staff rosters and photos.

TEMA's Chief of Communications David Wolfe, WA4VVX (MARS call sign AAR4CY), said, "Although there was no commercial power at the deployment site, TEMA's communications infrastructure was fully operational. Both the VHF high band and 800 MHz repeater systems had good coverage for voice command and control. Our shortage was Internet connectivity, and our unmet needs were e-mail and the ability to send pictures. MARS Winlink provided exactly what was not available by any other means."

Carter said that this event illustrates the importance of detailed preparation and training that has taken place during realistic disaster response exercises over the past several years. "In the case of Tennessee, the story goes back a year and a half. Steve Waterman, K4CJX (MARS call sign

AAA9AC) began working with Wolfe in late 2006, preparing for just such a deployment. At the time, Army MARS was just beginning to adopt the Winlink 2000 radio e-mail network system, and with the assistance of the then-Tennessee State Director Paul Drothler, WO4U (MARS call sign AAV4DJ), Army MARS had just signed a Memorandum of Understanding with TEMA. This MOU just served to strengthen an already strong relationship between TEMA and Army MARS. Wolfe led TEMA staffers who were already hams to becoming MARS members and to become qualified MARS Winlink 2000 operators. The rest of Wolfe's team soon obtained their Amateur Radio and Army MARS licenses."

The next step, according to Carter, was joint training for TEMA staff and Tennessee Army MARS members. Some was classroom training followed up with extensive field training. The culmination of the field training was TNCAT07, a massive exercise that included the Central United States Earthquake Consortium (CUSEC), an eight-state alert consortium along the New Madrid fault line. This exercise also included the participation by ARRL Amateur Emergency Radio Service (ARES), Civil Air Patrol and other EmComm services that clearly demonstrated interoperability between TEMA, Tennessee Army MARS, the Amateur Radio community and other municipal communications services.

"To make a long story short," Carter said, "we now have seen a demonstration of seamless collaboration between Army MARS and one of our supported agencies under 'Real World' emergency conditions. This was the first Army MARS deployment since the Katrina/Rita disasters two years ago. Successfully meeting the challenge involved deployment readiness on the part of our members, and it required total Winlink 2000 mobility. First of all came the building of relationships with existing and potential customers, and then came meticulous training of state and federal staffers, and frequent exercising at home and in the field. With this pattern of established collaboration between our customers and MARS members, we enter the new era of Army MARS Emergency communications support."

==> DUCIE ISLAND, VP6DX: MAKING CONTACTS, BREAKING RECORDS

After 13 days, 7 hours and 37 minutes of continuous operation, the VP6DX Team on Ducie Island <http://ducie2008.dl1mgb.com/index.php> made their 168,723rd contact. Valeri Koursov, RA0ALM, of Krasnoyarsk, Russia, contacted the Ducie Island expedition on Monday, February 25, 2008 at 0437 UTC on 30 meters. According to documents maintained by Jari Jussila, OH2BU, this contact breaks the record for the largest number of contacts made by any radio expedition. The previous record was held since February 8-28, 2001 by the Five Star DX Association's DXpedition to the Comoros Island, D68C.

The Ducie Island DXpedition has broken other expedition records throughout the course of the DXpedition, including:
* The largest number of RTTY contacts, previously held by the Swains Island N8S DXpedition in April 2007.
* The largest number of SSB (voice) contacts, previously held by the Comoros Island D68C DXpedition.
* The largest number of contacts on 40 meters, previously held by the Libya 5A7A DXpedition in November 2006.
* The largest number of contacts on 30 meters, previously held by the St Brandon Island 3B7C DXpedition in September 2007.

* The largest number of contacts on 17 meters, previously held by the Swains Island N8S DXpedition.
* The largest number of contacts with North America, previously held by the Comoros Island D68C DXpedition.
* The largest number of contacts with South America, previously held by the Peter I Island 3Y0X DXpedition in February 2006.
* The largest number of contacts with Africa, previously held by the Rodrigues Island 3B9C DXpedition in March-April 2004.

The Ducie Island crew received inquiries about the equipment and antennas used on Ducie Island. They reported that each operating position used:
* Elecraft K3 radio. They said "The outstanding receiver and transmitter characteristics allowed us to run two positions simultaneously on any band -- even the very narrow 30 meter band -- with absolutely no interference. Good design makes the complex appear simple: the ins and outs of this sophisticated radio were quickly mastered by the operator team, none of whom had seen a K3 before the expedition."
* Microham microKeyer II computer interfaces: plug in, turn on, call CQ and get to work.
* Acom 2000, 1000 or 1010 amplifiers: quietly getting the job done without trouble. The position used on 160 meters includes an OM 2500 HF amplifier.
* 200 W W3NQN bandpass filters from Array Solutions and 2 kW bandpass filters from 4O3A.
* WinTest logging software running on Durabook ruggedized laptops.
* Honda EM65is and EM30is inverter supply, gasoline generators. The operators report that the generators offer "100 percent reliability to date. The inverter system has been very tolerant of the widely varying loads presented to the generators as multiple operating positions switch between transmit (high power consumption) and receive (low power consumption), a vast improvement over previous gasoline generator designs."

The seven operating positions were divided into two sites: East (four positions) and West (three positions). The operating sites stood about 1 kilometer apart, a 15 minute walk over a coral shelf bordering the island's inner lagoon. Each site had its own WiFi network; a microwave link tied the two sites together. Sleeping tents and meals were located at the East camp.

The Ducie Island DXpedition closed down operations on Wednesday, February 27. Amateurs who had QSOs with VP6DX can check the online logs <http://ducie2008.dl1mgb.com/onlinelog/index.php>. -- Information provided by VP6DX Team

==> TWO NEW TITLES JOIN THE ARRL BOOKSHELF

The ARRL is pleased to announce two new books as part of the spring publications line-up: "ARRL's VHF Digital Handbook" and "ARRL's Hands-On Radio Experiments." These books complete the spring suite that includes the 2008-2009 "ARRL Repeater Directory" and "TravelPlus for Repeaters" CD-ROM, both to be released in April.

"ARRL's VHF Digital Handbook," written by QST Editor Steve Ford, WB8IMY, looks at how today's Amateur Radio operators are using digital radio applications for fun, technical achievement and public service. And it's no wonder -- getting started often requires little more than a VHF radio and a computer. This new book includes such topics as packet radio, APRS, D-STAR, digital applications in public service and emergency communications and much more.

Without complicated "owner's manual" jargon, "ARRL's VHF Digital Handbook" presents the material through a unique how-to approach and friendly, conversational style. Readers will understand how to setup and operate their equipment and software and make the best use of their VHF digital station.

"ARRL's Hands-On Radio Experiments," written by H. Ward Silver, N0AX, is a compilation of the author's "Hands-on Radio" columns that appeared in QST from 2003-2008. The experiments cover a wealth of topics designed to educate today's radio experimenters, and inspire others who want to learn what makes their radios work. Even seasoned experts will encounter new approaches to practical methods, new explanations for familiar topics and new ideas that will enhance your understanding of the radio art. Step-by-step, Silver expertly leads you through each experiment -- and you'll make discoveries along the way.

With more than 60 experiments ranging from Radio and Electronic Fundamentals to Semiconductor Basics to Transmission Lines and Impedance Matching to Power Supplies, these projects are designed to increase your understanding of basic radio fundamentals, components, circuits and design.

Order your copy of "ARRL's Hands-On Radio Experiments" and "ARRL's VHF Digital Handbook" today at the ARRL Online Store <http://www.arrl.org/catalog/>.

==> THE MARCH/APRIL ISSUE OF NCJ NOW AVAILABLE

NCJ, The National Contest Journal is what everyone interested in radiosport needs to have in their shack. Filled with the latest news from the contesting world, this is a definite must-have. Whether you are new to contesting or are a seasoned pro (or somewhere in the middle), you will find something in NCJ just for you.

In the March/April issue, David Robbins, K1TTT, ruminates on a "Real-Time Contest Scoreboard." Julius Fazekas, III, N2WN, discusses "Top Band Contesting: My 80/160 Meter Receive Antenna Evolution." Tom Menas, K3WT, remembers the "The 5J0A San Andres Island 2007 CQ WW CW Contest Operation," and Scott Robbins, W4PA, profiles Rick Lindquist, N1RL, in this issue's "NCJ Profiles." Bob Neece, K0KR, concludes his "virtual tour" of the CAC in his article, "Update: The ARRL Contest Advisory Committee -- Part 2."

If you've been waiting to see how you did in the October 2007 RTTY Sprint, you definitely don't want to miss this issue! Ed Muns, W0YK, give readers the rundown on this popular contest. Was your log one of three "Golden Logs" received? Check out your scores and see if you can beat it for the March Sprint.

A new regular column appears in this issue: "Contesting 101." Each issue, Kirk Pickering, K4RO, takes contesters, novice and expert alike, around the "nuts and bolts" of radiosport. This issue, he looks at why people get started in contesting, as well as an explanation of why people participate in contests.

Of course, there are all the regular columns and features you expect from NCJ: "Workshop Chronicles," by Don Daso, K4ZA; "Contest Tips, Tricks & Techniques," by Gary Sutcliffe, W9XT; "Propagation," by Carl Luetzelschwab, K9LA; "VHF-UHF Contesting," by Jon Jones, N0JK; "Contesting on a Budget," by Paul Schaffenberger, K5AF; "DX Contest Activity Announcements," by Bill Feidt, NG3K; "RTTY Contesting," by Don Hill, AA5AU, and "Contest Calendar," by Bruce Horn, WA7BNM.

All this and more in the March/April issue of NCJ. NCJ is published six times a year by the ARRL; it is edited by Al Dewey, K0AD. Subscribe today <http://www.arrl.org/ncj/>!

==> FCC DENIES PETITIONS TO BRING BACK MORSE CODE TESTING

In a "Memorandum Opinion and Order" (MOO) <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-08-59A1.pdf> released February 28, the FCC denied two petitions calling for General or Amateur Extra license applicants to demonstrate proficiency in Morse code. In December 2006, the FCC released a "Report and Order" (R&O) <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-06-178A1.pdf> in the "Morse code proceeding," WT Docket 05-235, that eliminated Morse code testing as of February 23, 2007.

The "R&O" amended Section 97.501 to remove the telegraphy requirement. In reaching this decision, the FCC noted in the R&O that "one of the fundamental purposes underlying our Part 97 rules is to accommodate amateur radio operators' ability to contribute to the advancement of the radio art, and that the Commission had previously concluded that an individual's ability to demonstrate Morse code proficiency is not necessarily indicative of his or her ability to contribute to the advancement of the radio art." The FCC also noted that another fundamental purpose underlying Part 97 rules is "to enhance the value of the amateur service to the public, particularly with respect to emergency communications, and that the Commission had previously concluded that most emergency communication today is performed using voice, data, or video modes, because information can be exchanged much faster using modes of communication other than telegraphy."

The Commission therefore concluded that requiring an individual to demonstrate Morse code proficiency as a licensing requirement "did not further the purposes of the Part 97 rules." The Commission also found that this reasoning applied equally to the General Class and the Amateur Extra Class, so "it rejected suggestions that the Morse code requirement be eliminated for the General Class license but retained for the Amateur Extra Class license."

In the wake of the FCC's actions in WT Docket 05-235, two amateurs submitted separate petitions to the FCC, asking them to bring back the testing. Anthony R. Gordon, KG6EQM, of West Covina California, objected to the FCC eliminating the telegraphy examination element as an examination requirement for the

Amateur Extra Class operator license. Russell D. Ward, W4NI, of Nashville, Tennessee, requested the FCC reconsider their decision for "'strictly procedural'" reasons.
